<i>Table of contents</i>	III
SUMMARY	1
RESUMEN	1
RESUM	2
1. INTRODUCTION	5
1.1. Tumor immune micro-environment	5
1.1.1. Immune surveillance of tumors across history	5
1.1.2. The immunoediting concept	6
1.1.3. T lymphocytes in tumors	8
1.1.4. Fibroblasts: suppressive CAFs	13
1.1.5. Dendritic cells in the TME	14
1.2. Tumor metabolism	18
1.2.1. Abnormal vascularization and hypoxia	18
1.2.2. Glycolysis and nutrient deprivation	20
1.2.3. Waste products: lactate accumulation	21
1.3. Spatial analysis of the TME	22
1.3.1. Multiplexed immunofluorescence	23
1.3.2. Spatial transcriptomics	25
1.4. Triple Negative Breast Cancer	26
1.4.1. Current treatments	27
1.4.2. Recurrence and resistance	27
1.5. Immunotherapy for TNBC	31
1.5.1. Immune checkpoint blockade	31
1.5.2. Current status and approval	32
1.5.3. Unmet needs	34
2. HYPOTHESIS AND OBJECTIVES	35
3. RESULTS	37

3.1.	GFP as a visual antigen allows to unequivocally detect resistant cells.	39
3.2.	Cancer cells that survive upon adoptive T cell therapy do not proliferate.	40
3.3.	QCCs are more resistant to direct attack from cytotoxic T cells.	46
3.4.	QCCs possess greater cancer initiation potential.	50
3.5.	Clusters of QCCs form a niche with limited immune infiltration.	53
3.6.	Proliferation correlates with T cell infiltration in patients.	55
3.7.	QCCs express genes related to chemoresistance, hypoxia, and glycolysis.	57
3.8.	The QCC niche displays suppressive fibroblasts and more exhausted T cells.	62
3.9.	Dendritic cells inside clusters of QCCs express lower levels of key genes for T cell immunity	
	73	
3.10.	Specific activation of HIF1a in tumor cells abrogates anti-tumor immunity.	79
3.11.	HIF1a activation in tumor cells but not in DCs impairs DC activation.	87
3.12.	Lactate may drive immune dysfunction of DCs.	89
4.	DISCUSSION	93
	Future perspective	97
	Graphical abstract	98
5.	CONCLUSIONS	99
6.	MATERIAL AND METHODS	101
	Materials and key resources	101
	Experimental model and subject details	106
	Cell lines	106
	Human FFPE samples and Bulk RNAseq data	107
	Plasmids	108
	Methods details	108
	Tumor injection	108
	Lentiviral production and transduction	109
	Generation of knockout cell lines	109

Adoptive transfer of CD8+ T cells	110
Flow cytometry and FACS-sorting	110
Bulk RNA-sequencing	110
Immunofluorescence	111
Microscopy methods	111
Evaluation of cell cycle	113
Tumor initiation assay	114
Glucose uptake	114
Photo-conversion of Areas to Dissect Micro-Environments (PADME-seq)	114
Co-detection by indexing (CODEX) tissue staining.	116
Bone marrow derived dendritic cell (BM-DC) generation and culture in different oxygen concentrations.	117
Western blot	117
scRNA-seq	118
Lactate quantification by mass spectrometry	118
Splenic cDC isolation	118
Quantification and statistical analysis	118
Computational analysis of immunofluorescent images of mouse tumors	118
Analysis of immunofluorescent FFPE sections from human TNBC	120
Mouse Bulk RNAseq analysis	120
CODEX image processing and analysis.	120
RNA-seq analysis from TNBC patient cohort	121
PADME-seq and murine scRNA-seq 10X genomics and analysis	121
Statistical analysis	124
7. REFERENCES	125
References	125
8. ANNEXES I	147
8.1. Photo-conversion of Areas to dissect Micro-Environments (PADME)	147
9. ANNEXES II	169
9.1. Scientific contribution	169
9.1.1. Articles	169
9.1.2. Congress communications as poster	169

9.2. Scientific mentoring	170
9.3. Fellowships and awards	170
9.4. International internships	170
