<b>Abstract</b>	<b>3</b>
<b>Contents</b>	<b>11</b>
<b>1 Introduction</b>	<b>17</b>
1.1 The era of transcriptomics: from bulk to cell-level resolution . . . . .	19
1.1.1 Single-cell RNA-seq technologies . . . . .	20
1.2 Post-transcriptional regulation of gene expression: alternative splicing and mRNA isoform expression . . . . .	27
1.2.1 Computational approaches for the study of AS and iso- form transcriptomics . . . . .	31
<b>2 Motivation, aims and contributions</b>	<b>35</b>
2.1 Motivation . . . . .	37
2.2 Aims . . . . .	38
2.3 Contributions made during the thesis . . . . .	40
2.3.1 Publications . . . . .	40
2.3.2 Conferences . . . . .	41

2.3.3 Software development . . . . .	44
2.3.4 Undergraduate and Master's thesis supervision . . . . .	45
2.3.5 Teaching . . . . .	45
<b>3 Evaluation of the limitations of single-cell RNA-seq technologies for the study of isoforms</b>	<b>49</b>
3.1 Introduction . . . . .	51
3.2 Ideal conditions for single-cell isoform studies . . . . .	53
3.2.1 Full-length transcript capture . . . . .	54
3.2.2 Sequencing depth . . . . .	55
3.2.3 Cell throughput . . . . .	56
3.2.4 Sequencing errors and artifacts . . . . .	58
3.3 Expectations meet reality: what has been and remains to be done in single-cell isoform studies . . . . .	61
3.3.1 Full-length transcript capture and isoform continuity . .	62
3.3.2 Capture efficiency and sequencing depth . . . . .	68
3.3.3 Cell throughput . . . . .	71
3.3.4 Sequencing errors and artifacts . . . . .	73
3.4 Navigating the computational landscape of single-cell isoform studies . . . . .	76
3.5 Assessing the theoretical limits of current technologies for single-cell isoform studies . . . . .	80
3.5.1 Methods . . . . .	80

3.5.2 Results . . . . .	86
3.6 Discussion . . . . .	94
3.6.1 Advances in short-read data generation . . . . .	95
3.6.2 Advances in computational method development . . . . .	97
3.6.3 Advances in long-read data generation . . . . .	99
<b>4 Integration of bulk long-reads and single-cell short-read data to enhance isoform analyses</b>	<b>105</b>
4.1 Introduction . . . . .	107
4.2 Methods . . . . .	111
4.2.1 Data availability . . . . .	111
4.2.2 Transcriptome reconstruction using long reads . . . . .	113
4.2.3 Functional annotation of long read-defined isoforms . . . . .	116
4.2.4 SQANTI3 machine learning-based filter . . . . .	121
4.2.5 Filtering of potential artifacts using the SQANTI3 ML filter . . . . .	124
4.2.6 SQANTI3 rescue strategy . . . . .	127
4.2.7 Rescue of ML-filtered artifacts using SQANTI3 . . . . .	132
4.2.8 Single-cell data pre-processing and quality control . . . . .	133
4.2.9 Single-cell multi-group Differential Expression analysis . . . . .	135
4.2.10 Neural cell sampling strategy to select a consensus set of DE isoforms . . . . .	136
4.3 Results . . . . .	138

4.3.1 Defining high-quality long read transcripts: insights from pre and post curation . . . . .	138
4.3.2 Characterizing IsoAnnotLite: performance assessment on long-read transcript annotations . . . . .	144
4.3.3 Enabling multi-group differential expression of isoforms in single-cell data . . . . .	147
4.3.4 Design of an enhanced, automated filtering strategy: the SQANTI3 ML filter . . . . .	150
4.3.5 Enhancing transcriptome rescue in SQANTI3: a comprehensive approach . . . . .	165
4.4 Discussion . . . . .	171
<b>5 A novel method to derive isoform co-usage networks from single-cell data</b>	<b>179</b>
5.1 Introduction . . . . .	181
5.2 Methods . . . . .	185
5.2.1 Data and software availability . . . . .	185
5.2.2 Percentile correlation . . . . .	185
5.2.3 Semi-automated isoform clustering . . . . .	187
5.2.4 Co-expression pattern simulation . . . . .	191
5.2.5 Benchmarking of isoform correlation metrics for scRNA-seq data . . . . .	194
5.2.6 Differential Isoform Usage and co-Differential Isoform Usage across multiple groups . . . . .	196

5.2.7 Functional analyses . . . . .	199
5.2.8 Analysis of GABA-ergic neuron subtypes . . . . .	204
5.3 Results . . . . .	205
5.3.1 Detecting cell type-dependent isoform co-expression . . . . .	205
5.3.2 Validation of percentile correlations on simulated data .	213
5.3.3 Co-differential isoform usage analysis of single-cell iso- form expression . . . . .	220
5.3.4 Functional analysis of isoforms within a coDIU network .	223
5.3.5 Functional insights on neuron-oligodendrocyte isoform co-expression patterns . . . . .	231
5.3.6 Analysis of coDIU patterns in GABA-ergic neuron subtypes	236
5.4 Discussion . . . . .	240
<b>6 Conclusions</b>	<b>245</b>
