

TABLE OF CONTENTS

1.	Introduction.....	1
1.1.	Main objectives	8
1.2.	Methodology.....	9
1.2.1.	General framework	10
1.2.2.	Weather generator	15
1.2.3.	Hydrological model	16
1.3.	Thesis structure	18
2.	New approach to estimate extreme flooding using continuous synthetic simulation supported by regional precipitation and non-systematic flood data.	19
2.1.	Abstract	20
2.2.	Introduction	20
2.3.	Case Study and Data Collection.....	24
2.4.	Methodology.....	27
2.5.	Results.....	30
2.5.1.	Fully Distributed Hydrological Model	30
2.5.2.	Stochastic Daily Weather Generator.....	33
2.5.3.	Peak Discharge Transformation.....	35
2.5.4.	Validation with the Palaeoflood Information	36
2.6.	Discussion.....	37
2.6.1.	Flood Frequency with Weather Generators and A Regional Precipitation Study	37
2.6.2.	Non-Systematic Information.....	39
2.6.3.	A Holistic Methodological Approach to Estimate Extreme Floods	41

*On the use of weather generators for the estimation of low-frequency floods
under a changing climate*

2.7.	Conclusions.....	42
3.	Exploring the uncertainty of Weather Generators' extreme estimates in different practical available information scenarios	45
3.1.	Abstract	46
3.2.	Introduction	46
3.3.	Synthetic case study	50
3.3.1.	Location and available meteorological data.	50
3.3.2.	Stochastic weather generator: GWEX	51
3.4.	Methodology.....	53
3.5.	Results.....	54
3.5.1.	Information Scenarios	54
3.5.2.	Calibration <i>XT</i>	57
3.5.3.	Population extremality.....	59
3.5.4.	Sample length sensitivity.....	60
3.6.	Discussion.....	61
3.7.	Conclusions.....	64
4.	Sample Uncertainty Analysis of Daily Flood Quantiles Using a Weather Generator	68
4.1.	Abstract	69
4.2.	Introduction	70
4.3.	Methodology.....	73
4.3.1.	Simulation Framework.....	73
4.3.2.	Stochastic Weather Generator: GWEX	74
4.3.3.	Eco-Hydrological Model: TETIS	75
4.4.	Synthetic Case Study	76
4.4.1.	Basin Description.....	76

*On the use of weather generators for the estimation of low-frequency floods
under a changing climate*

4.4.2.	Climate Description and Statistics	77
4.5.	Results.....	79
4.5.1.	Preliminary Analysis	79
4.5.2.	Hydrological Characteristics of the Basin.....	80
4.5.3.	Precipitation Regime.....	81
4.5.4.	Climate Extremality.....	82
4.5.5.	Uncertainty Propagation.....	84
4.6.	Discussion.....	87
4.7.	Conclusions.....	91
5.	Expanding Information for Flood Frequency Analysis Using a Weather Generator: Application in a Spanish Mediterranean Catchment	93
5.1.	Abstract.....	94
5.2.	Introduction.....	94
5.3.	Case study.....	97
5.3.1.	Study area.....	97
5.3.2.	Data collection.....	99
5.4.	Methodology.....	101
5.4.1.	General Framework.....	101
5.4.2.	Regional study of annual maximum daily precipitation.....	102
5.4.3.	Implementation of a daily Weather Generator	103
5.4.4.	Storm selection and temporal disaggregation.....	104
5.4.5.	Discharge generation and Flood Frequency analysis.....	105
5.5.	Results.....	105
5.5.1.	Regional study of annual maximum daily precipitation.....	105
5.5.2.	Daily Weather Generator.....	107

*On the use of weather generators for the estimation of low-frequency floods
under a changing climate*

5.5.3. Storm selection, and temporal disaggregation and torrentiality validation	109
5.5.4. Rainfall-runoff model and Flood Frequency analysis.....	111
5.6. Discussion.....	116
5.6.1. On the added value of expanding information from regional models.	116
5.6.2. On the adequate representation of storms in the region from the selected model.....	118
5.6.3. On the methodological approach to estimate sub-daily extreme flood events.....	119
5.7. Conclusions.....	123
6. On the Use of Weather Generators for the Estimation of Low-Frequency Floods Under a Changing Climate.....	126
6.1. Abstract.....	127
6.2. Introduction.....	127
6.3. Case study.....	130
6.3.1. Study area.	130
6.3.2. Hydrometeorological information	130
6.4. Methodology.....	132
6.4.1. Bias correction of climate series.....	133
6.4.2. Regional study of maximum daily precipitation.....	133
6.4.3. Weather generator: GWEX	134
6.4.4. Ecohydrological model: TETIS.....	135
6.5. Results.....	135
6.5.1. Temperatures.....	135
6.5.2. Precipitation.....	138
6.5.3. Discharges	139

*On the use of weather generators for the estimation of low-frequency floods
under a changing climate*

6.6.	Discussion.....	142
6.7.	Conclusions.....	146
7.	General discussion of the results.....	148
8.	Conclusions.....	162
8.1.	A holistic methodological approach to estimate extreme flood frequency under a changing climate.	163
8.2.	Future flood quantile projections.....	164
8.3.	Final remarks.....	165
8.4.	Future research.....	166
9.	ANNEXES.....	169
A.1	References.....	170
