Abstract	v
Contents	xiii
1 Introduction	1
1.1 Brief state-of-the-art. . . . .	1
1.2 Motivation . . . . .	3
1.3 Thesis objectives. . . . .	7
2 Holograms in curvilinear coordinates	9
2.1 Introduction . . . . .	9
2.2 Materials and methods . . . . .	10
2.2.1 Lens design . . . . .	10
2.2.2 Simulations . . . . .	13
2.2.3 Studies . . . . .	14
2.3 Results . . . . .	15
2.3.1 Single focus . . . . .	15

2.3.2 Transcranial scenario . . . . .	17
2.4 Chapter conclusions . . . . .	20
<b>3 Field-matching holograms</b>	<b>23</b>
3.1 Introduction . . . . .	23
3.2 Single plane fundamentals . . . . .	24
3.3 Field matching fundamentals . . . . .	25
3.4 Critical angle description . . . . .	27
3.5 Single focus . . . . .	29
3.5.1 Single-plane hologram design . . . . .	29
3.5.2 Field-matching hologram design . . . . .	30
3.5.3 Critical angle . . . . .	33
3.5.4 Numerical calculations . . . . .	33
3.6 Holograms . . . . .	37
3.6.1 Bessel beams . . . . .	37
3.6.2 Transversal holograms . . . . .	41
3.7 Chapter conclusions . . . . .	41
<b>4 Holograms to produce thermal patterns</b>	<b>45</b>
4.1 Introduction . . . . .	45
4.2 Materials and methods . . . . .	47
4.2.1 Lens design . . . . .	47
4.2.2 Non-linearities . . . . .	49
4.2.3 Acoustic validation . . . . .	50
4.2.4 Thermal validation . . . . .	51
4.3 Results . . . . .	51
4.3.1 Number 2 . . . . .	51
4.3.2 Wide hologram . . . . .	54
4.4 Chapter conclusions . . . . .	56

<b>5</b>	<b>Uniform thermal dose using tailored holograms</b>	<b>59</b>
5.1	Introduction . . . . .	60
5.2	Materials and Methods . . . . .	61
5.2.1	Holographic ultrasound system design . . . . .	61
5.2.2	Acoustic field validation. . . . .	63
5.2.3	Thermal exposure system . . . . .	64
5.2.4	Acoustic and thermal simulations . . . . .	66
5.2.5	Tumour spheroid exposure . . . . .	67
5.2.6	Size and adenosine triphosphate measurements. . . . .	68
5.2.7	Statistical analysis . . . . .	69
5.3	Results . . . . .	69
5.3.1	Transducer Vibration Evaluation . . . . .	69
5.3.2	Lens for iso-pressure focal peaks (3-focus) . . . . .	70
5.3.3	Lens for iso-thermal dose (7-focus) . . . . .	72
5.3.4	Spheroid study. . . . .	73
5.4	Discussion . . . . .	75
5.5	Chapter conclusions. . . . .	78
<b>6</b>	<b>Ultrasound targeting through the temporal window using holograms</b>	<b>81</b>
6.1	Introduction . . . . .	82
6.2	Materials and Methods . . . . .	85
6.3	Results . . . . .	89
6.3.1	Focused ultrasound transducer . . . . .	89
6.3.2	Holograms for skull aberration correction . . . . .	91
6.3.3	Holograms for bifocal targeting . . . . .	93
6.3.4	Robustness against misalignment . . . . .	95
6.3.5	Skull heating rate . . . . .	98
6.3.6	Patient-specific lenses . . . . .	99
6.4	Discussion . . . . .	99
6.5	Chapter conclusions. . . . .	102

<b>7 Experimental evaluation of transcranial ultrasonic lenses using acoustic holographic projections</b>	<b>105</b>
7.1 Introduction	106
7.2 Techniques for field estimation	109
7.2.1 Direct measurements	109
7.2.2 Holographic projection methods	109
7.3 Experimental setup	113
7.3.1 System design	113
7.3.2 Lens design and manufacturing	113
7.3.3 Test cases	113
7.3.4 Experimental procedure	114
7.4 Results	116
7.4.1 Four-foci lens	116
7.4.2 Preclinical lens	118
7.4.3 Holographic lens characterization	120
7.5 Discussion	122
7.6 Chapter conclusions	124
<b>8 Preclinical holographic ultrasound system for blood-brain barrier opening</b>	<b>127</b>
8.1 Introduction	127
8.2 Materials and methods	129
8.2.1 System specifications and subsystem design	129
8.2.2 System constraints	130
8.2.3 Lens design	131
8.2.4 Experimental setup	132
8.2.5 Experimental protocol design	134
8.3 Results	135
8.3.1 Lens performance	135
8.3.2 Lens calibration	137
8.4 Chapter conclusions	137

9 Conclusions	141
9.1 General discussion and conclusions. . . . .	141
9.2 Future work. . . . .	145
