**Resumen** **iv**

**Resum** **vii**

**1 Introduction** **1**
1.1 Motivation . . . . . 1
1.2 Aims . . . . . 4
1.3 Thesis organisation . . . . . 6

**2 State of the art** **9**
2.1 Hierarchical structure of bone . . . . . 9
2.1.1 Introduction to hierarchical levels of the bones structure . 10
2.1.2 Cancellous bone and lamellar tissue structure, features and properties . . . . . 13
2.1.3 Mechanical behaviour of bone . . . . . 16
2.1.4 Elastic properties of bone . . . . . 18
2.1.5 Strength properties of bone . . . . . 22
2.1.6 Bone failure at different scales . . . . . 25
2.2 Experimental characterisation of cancellous bone . . . . . 29
2.3 Bone tissue characterisation using imaging techniques . . . . . 34
2.3.1 Conventional imaging techniques for bone . . . . . 35

2.3.2 Techniques to evaluate bone hierarchical levels . . . . . 38
2.3.3 Artifacts introduced in bone images . . . . . 43
2.3.4 Image segmentation methods . . . . . 46
2.4 Morphometric characterisation of cancellous bone . . . . . 48
2.5 Numerical modelling of cancellous bone . . . . . 54
2.5.1 Parametric numerical models of bone . . . . . 54
2.5.2 Image-based models . . . . . 56
2.5.3 Definition of material properties in numerical models . . 58
2.5.4 Estimation of bone elastic properties . . . . . 59
2.5.5 Modeling failure in numerical models . . . . . 60
2.6 Osteoporotic bone tissue characterisation . . . . . 62
2.6.1 Age-related bone diseases . . . . . 63
2.6.2 Epidemiology and impact of osteoporosis . . . . . 65
2.6.3 Pathogenesis of osteoporosis . . . . . 67
2.6.4 Diagnosis of osteoporosis . . . . . 71
2.6.5 Osteoporotic tissue . . . . . 74
2.7 Additive manufacturing in biomechanics . . . . . 77
2.7.1 Definition of additive manufacturing processes . . . . . 78
2.7.2 Fused Deposition Modelling (FDM) Technology . . . . . 81
2.7.3 Polylactic acid (PLA) . . . . . 83
2.7.4 Implementation of additive manufacturing in biomedical field . . . . . 84

**3 Image analysis of cancellous bone 89**
3.1 Introduction . . . . . 89
3.2 Cancellous bone samples description . . . . . 90
3.2.1 Swine cancellous bone samples from lumbar vertebrae . . 91
3.2.2 Human cancellous bone samples from femoral heads . . . 94
3.2.2.1 Classification of the human femoral cancellous bone specimens . . . . . 101
3.3 Cancellous architecture assessment at the stereomicroscope . . . 102
3.4 $\mu$-CT images analysis of cancellous bone specimens . . . . . 111
3.5 Lamellar tissue assessment at the field emission scanning electron microscope (FESEM) . . . . . 114
3.5.1 Cancellous bone sample preparation procedure for FESEM 115
3.5.2 Imaging assessment of lamellar tissue structure . . . . . 117
3.5.3 Imaging assessment of lamellar tissue porosity . . . . . 119
3.6 Conclusions . . . . . 122

**4 Explicit expressions for the estimation of the elastic constants of lamellar bone as a function of mineral content and porosity 127**
4.1 Introduction . . . 127
4.2 Explicit modelling of porosity at tissue level . . . 129
4.2.1 Modelling porosity at tissue level . . . 131
4.2.2 Strength limits inferred of lamellar tissue . . . 135
4.2.3 Micro-FE of trabecular vertebral specimen . . . 138
4.2.4 Bone failure modelling . . . 139
4.2.5 Material property degradation MPDG for damage evolution law . . . 140
4.3 Results . . . 143
4.3.1 Stiffness of lamellar tissue as a function of bone mineral density (BMD) and microporosity . . . 143
4.3.2 Numerical modelling of the trabecular bone strength . . . 148
4.3.3 Discussion of the obtained results . . . 152
4.4 Conclusions . . . 158

**5 Estimation of the strength limits of lamellar bone as a function of mineral content and porosity 159**
5.1 Introduction . . . 159
5.2 Finite element model description . . . 165
5.3 Bounds on the ultimate tensile strength of non-porous lamellar tissue for different bone mineral content . . . 167
5.4 Bounds on ultimate compressive strength of non-porous lamellar tissue for different bone mineral content . . . 170
5.5 In-plane ultimate strength of porous lamellar tissue considering mineral content and lacunae concentration . . . 173
5.5.1 Tensile and compressive strength . . . 173
5.6 Results obtained for in-plane strength limits . . . 176
5.6.1 Ultimate strength of non-porous lamellar tissue . . . 176
5.6.2 In-plane ultimate strength of lamellar tissue considering mineral content and lacunae concentration . . . 178
5.6.2.1 Ultimate tensile and compressive strength . . . 179
5.6.2.2 Intralamelar shear stress evolution with porosity and mineral content . . . 185
5.7 Discussion . . . 186
5.8 Conclusions . . . 187

**6 Experimental characterisation and numerical simulation of the mechanical behaviour of osteoporotic, osteoarthrosic and healthy cancellous human bone 189**
6.1 Introduction . . . 189
6.2 Methodology to obtain the cancellous bone samples . . . 191
6.3 High resolution scanning, image segmentation and morphometric characterisation . . . 193
6.3.1 Micro-CT image segmentation . . . 194
6.3.2 Assessment of the bone mineral density using micro-CT images . . . 195
6.3.3 Morphometric analysis of the human cancellous bone specimens . . . 202
6.3.3.1 Morphometric results of the healthy, osteoarthrosic and osteoporotic cancellous bone specimens . . . 208
6.4 Compression mechanical characterisation of human cancellous bone specimens . . . 214
6.4.1 Apparent elastic modulus ($E_{\text{app}}$) estimation . . . 215
6.4.2 Compression mechanical behaviour of human cancellous bone up to failure . . . 217
6.5 Correlation between morphometric parameters and apparent properties of human cancellous bone . . . 222
6.6 Numerical modelling and calibration of the elastic and failure properties of human cancellous bone . . . 228
6.6.1 Finite element model generation and failure criterion . . . 228
6.6.2 Elastic and failure properties using FE models for healthy and diseased human cancellous specimens . . . 231
6.7 Comparison of apparent and tissue Young's modulus estimated by $\mu$-CT, compression tests and FE models . . . 235
6.8 Conclusions . . . 237

**7 Mechanical characterisation of cancellous bone surrogates and gyroids made out of additive manufacturing. Experimental testing and numerical correlation 241**
7.1 Introduction . . . 241
7.2 Analysis of the compressive behaviour of cancellous bone surrogates . . . 243
7.2.1 Preparation and manufacture of bone surrogates . . . 244
7.2.2 Experimental results of the cancellous bone surrogates subjected to compression load . . . 247
7.2.3 Calibration of elastic and failure properties of cancellous bone surrogates . . . 251

7.3 Characterisation of the compressive behaviour of triply periodic minimal surface (TPMS) structures . . . . . 253
7.3.1 Introduction . . . . . 254
7.3.2 Analysis and design of a gyroid TPMS . . . . . 256
7.3.2.1 Experimental compression characterisation of sheet and solid gyroids . . . . . 258
7.3.2.2 Numerical estimation of elastic and failure properties of sheet gyroid . . . . . 261
7.3.3 Design and evaluation of non-isotropic gyroids . . . . . 264
7.3.3.1 Geometric generation of non-isotropic sheet gyroids 265
7.3.3.2 3D printing process to obtain the polylactic acid (PLA) samples . . . . . 266
7.3.3.3 Analysis of the mechanical compression behaviour of non-isotropic sheet gyroids . . . . . 268
7.3.3.4 Numerical calibration of the elastic and failure properties of non-isotropic sheet gyroids . . . . . 275
7.4 Conclusions . . . . . 279

**8 Thesis conclusions and main contributions 281**
8.1 Conclusions . . . . . 281
8.2 Main contributions of the thesis . . . . . 285

**9 Future work 289**
