Listado de Figuras	XIV
Listado de Tablas	XV
Listado de Abreviaturas	XVI
Resumen	1
Resum	5
Summary	9
Capítulo 1: Introducción. Hipótesis y objetivos	13
<u>1.1. Acuicultura</u>	15
1.1.1. Estado actual y perspectivas futuras	15
1.1.2. El problema de la disponibilidad de ingredientes marinos para piensos de acuicultura	17
1.1.3. Fuentes alternativas a FM y FO para los piensos de acuicultura	18
<u>1.2. Gamáridos</u>	23
<u>1.3. Lípidos y ácidos grasos</u>	25
1.3.1. Lípidos polares	26
1.3.2. Lípidos neutros	27
1.3.3. Ácidos grasos	28
<u>1.4. Biosíntesis de ácidos grasos poliinsaturados de cadena larga</u>	30
1.4.1. Rutas de biosíntesis de LC-PUFAs	32
1.4.1.1. Desaturasas "methyl-end" ( $\omega$ x-des)	33
1.4.1.2. Desaturasas "front-end" (Fed)	34
1.4.1.3. Elongasas de ácidos grasos (Elovl)	35
<u>1.5. Economía circular y acuicultura</u>	38
<u>1.6. Hipótesis y objetivos</u>	40
1.6.1. Hipótesis	40
1.6.2. Objetivo general	40
1.6.3. Objetivos específicos	41
<u>1.7. Bibliografía</u>	42
Capítulo 2: Biosynthesis of long-chain polyunsaturated fatty acids in marine gammarids: Molecular cloning and functional characterisation of three fatty acyl elongases	55
<u>Abstract</u>	57
<u>2.1. Introduction</u>	58
<u>2.2. Results</u>	60
2.2.1. Phylogeny of the <i>E. marinus</i> Elovl	60

2.2.2. Roles of the <i>E. marinus</i> Elovl4, Elovl6 and Elovl1/7-like in LC-PUFA biosynthesis	64
<u>2.3. Discussion</u>	66
<u>2.4. Materials and methods</u>	69
2.4.1. Molecular cloning of full-length cDNAs of three Elovl6s from <i>E. marinus</i>	69
2.4.2. Sequence and phylogenetic analysis of the <i>E. marinus</i> elongases	72
2.4.3. Functional characterisation of the <i>E. marinus</i> Elovl	73
2.4.4. Fatty acid analysis	74
<u>2.5. References</u>	76
<b>Capitulo 3: Examination of gammarid transcriptomes reveals a widespread occurrence of key metabolic genes from epibiont bdelloid rotifers in freshwater species</b>	83
<u>Abstract</u>	85
<u>3.1. Introduction</u>	86
<u>3.2. Materials and methods</u>	89
3.2.1. Retrieval of LC-PUFA biosynthesis genes in gammarid transcriptomes	89
3.2.2. Phylogeny of LC-PUFA biosynthesis genes retrieved from freshwater gammarid transcriptomes	90
3.2.3. Screening gammarid transcriptomes for "contaminant" gene sequences from Rotifera symbionts	91
3.2.4. Detection of LC-PUFA biosynthesis genes in gammarids collected from the wild and laboratory cultures	91
3.2.5. Sequence identity of the LC-PUFA biosynthesis genes among gammarid transcriptomes	92
3.2.6. Genome location and exon-intron structure analysis of LC-PUFA biosynthesis genes in bdelloid rotifers	95
3.2.7. Functional characterisation of LC-PUFA biosynthetic elongases and desaturases in yeast	95
3.2.8. Fatty acid analysis	96
<u>3.3. Results</u>	97

3.3.1. Phylogeny of the LC-PUFA biosynthesis gene sequences retrieved from gammarid transcriptomes	97
3.3.2. Occurrence of Rotifera mitochondrial genes in gammarid transcriptomes	100
3.3.3. Sequence identity of <i>elovl2/5</i> , <i>fed</i> and <i>wx</i> retrieved from gammarid transcriptomes	101
3.3.4. Occurrence of LC-PUFA biosynthesis genes in gammarids collected from the wild and laboratory cultures	103
3.3.5. Exon-intron organisation of LC-PUFA biosynthesis genes from Bdelloidea rotifers	103
3.3.6. Functional characterisation of LC-PUFA biosynthesis enzymes from bdelloid rotifers	106
<u>3.4. Discussion</u>	107
<u>3.5. References</u>	112
<b>Capitolo 4: Effects of diet and temperature on the fatty acid composition of the gammarid <i>Gammarus locusta</i> fed alternative terrestrial feeds</b>	<b>121</b>
<u>Abstract</u>	123
<u>4.1. Introduction</u>	124
<u>4.2. Materials and methods</u>	126
4.2.1. Animal collection and culture	126
4.2.2. Experimental setup	126
4.2.3. Growth and survival	126
4.2.4. Fatty acid analysis	127
4.2.5. Statistical analysis	127
<u>4.3. Results</u>	128
4.3.1. Growth and survival	128
4.3.2. Fatty acid profiles of gammarids	129
<u>4.4. Discussion</u>	133
<u>4.5. References</u>	137
<b>Capitolo 5: Transcriptomic analysis and differential gene expression of the effects of diet and temperature in <i>Gammarus locusta</i> fed alternative terrestrial feeds</b>	<b>143</b>
<u>Abstract</u>	145
<u>5.1. Introduction</u>	146
<u>5.2. Materials and Methods</u>	149
5.2.1. Experimental design	149
5.2.2. RNA extraction, library preparation and Illumina sequencing	150

5.2.3. <i>In silico</i> clean-up of raw datasets and <i>de novo</i> transcriptome assembly of <i>G. locusta</i>	151
5.2.4. Decontamination and validation of transcriptome assembly	151
5.2.5. Transcriptome annotation	152
5.2.6. Differential gene expression analysis	152
5.2.7. Enrichment and network analyses	153
5.2.8. Statistics	153
<b>5.3. Results</b>	153
5.3.1. Sequencing, transcriptome assembly, and annotation of <i>G. locusta</i>	153
5.3.2. Differentially expressed genes in Experiment 1 (effect of diet)	154
5.3.3. Differentially expressed genes in Experiment 2 (effect of temperature)	157
5.3.4. Differential expression of genes with roles in fatty acid metabolism	159
5.3.5. Differential expression of genes with roles in moulting	160
<b>5.4. Discussion</b>	161
5.4.1. Effect of different diets in the expression of key metabolic genes of fatty acid metabolism and moulting	161
5.4.2. Effect of different temperatures in the expression of key metabolic genes for fatty acid metabolism and moulting	164
<b>5.5. Conclusions</b>	166
<b>5.6. Data availability</b>	166
<b>5.7. References</b>	167
<b>Capítulo 6: Discusión general</b>	179
<u>6.1. Capacidad biosintética de LC-PUFAs en gamáridos</u>	182
<u>6.2. Los gamáridos dulceacuícolas tienen asociados rotíferos capaces de biosintetizar LC-PUFAs</u>	186
<u>6.3. Efecto de la dieta y la temperatura en el metabolismo de ácidos grasos y el crecimiento de <i>G. locusta</i></u>	189
<u>6.4. Conclusiones finales y perspectivas futuras</u>	194
<u>6.5. Bibliografía</u>	196
<b>Capítulo 7: Conclusiones</b>	209
<b>Anexos</b>	213
