

TABLE OF CONTENTS

1. PREAMBLE.....	1
2.GENERAL INTRODUCTION.....	5
3. OBJECTIVES.....	43
4. CHAPTER I. Effect of food matrix components on EOCs antimicrobial activity	47
4.1. Article 1. Antimicrobial activity of essential oil components against <i>Escherichia coli</i> depends on the food components present in a food matrix	49
4.2. Article 2. Major food constituents influence the antibacterial activity of vanillin immobilized onto silicon microparticles against <i>Escherichia coli</i>	87
5. CHAPTER II. Effect of immobilized EOCs against spoilage bacteria	113
5.1. Article 3. Non thermal inactivation of <i>Alicyclobacillus acidoterrestris</i> and guaiacol production in orange juice by using silica microparticles functionalized with essential oil components	115
6. CHAPTER III. Effect of immobilized EOCs against viruses	145
6.1. Article 4. Tulane virus disinfection of drinking water by using natural antimicrobials immobilised on silica particles	147
7. CHAPTER IV. Consumer’s perception of using nanotechnology in the agri-food sector.....	171
7.1. Article 5. Nanotechnology in the agri-food sector: Consumer perceptions	173
8. GENERAL DISCUSSION	205
9. CONCLUSIONS AND FUTURE PERSPECTIVES.....	215
10. SCIENTIFIC CONTRIBUTIONS	219
