

Table of Contents

Abstract.....	1
Chapter 1. Introduction.....	7
1.1 Utilization and current status of fossil energy.....	9
1.2 Electrochemical energy storage devices	11
1.3. Supercapacitors (SCs).....	13
1.4 The chemical conversion of electrical energy.....	17
1.4.1 Electrocatalytic Water Splitting Reaction	17
1.4.2 Electrochemical Nitrate Conversion.....	22
1.5 References	31
Chapter 2. Objective.....	41
Chapter 3. Role of Defects on the Particle Size–Capacitance Relationship of Zn–Co Mixed Metal Oxide Supported on Heteroatom-Doped Graphenes as Supercapacitors	45
3.1 Introduction.....	47
3.2 Results and Discussion.....	50
3.2.1. Materials Preparation and Characterization.....	50
3.2.2 Electrochemical Performance.....	60
3.2.3 Origin of the Pseudocapacitive Properties of ZCO/BG.....	68
3.3 Conclusion.....	76
3.4 References	77
Chapter 4. MOF-derived ZnO-promoted NiCoP nanoparticles as high-performance battery-type material for hybrid supercapacitors application	83
4.1 Introduction.....	85
4.2 Results and discussion	88
4.2.1 Material synthesis and characterization	88
4.2.2 Analysis of the PC properties	95
4.2.3 Investigation of structure-performance relationship in ZnNiCoP/C	98
4.2.4 Performance of ZnNiCoP/C in asymmetric hybrid supercapacitor devices	105

4.3 Conclusions	110
4.4 References	111
Chapter 5. High-current water electrolysis performance of metal phosphides grafted on porous 3D N-doped graphene prepared without using phosphine	117
5.1 Introduction.....	119
5.2 Results and discussion	121
5.2.1 Material synthesis and characterization	121
5.2.2 Hydrogen evolution reaction	132
5.2.3 Oxygen evolution reaction	135
5.2.4 Water electrolysis	138
5.3 Conclusions	142
5.4 References	142
Chapter 6. Mixed Fe-Mo carbide prepared by a sonochemical synthesis as highly efficient nitrate reduction electrocatalyst.....	147
6.1 Introduction.....	149
6.2 Results and Discussion.....	151
6.2.1 Materials preparation and characterization	151
6.2.2 Electrocatalytic NO ₃ RR performance.....	157
6.2.3 FMC/CB as electrode component of a rechargeable Zn-NO ₃ ⁻ battery	162
6.2.4 DFT calculations.....	163
6.3 Conclusions	166
6.4 References	167
Chapter 7. Experimental Section	171
7.1 Material synthesis	173
7.1.1 Employed chemical	173
7.1.2 Synthesis of ZCO/BG material.....	173
7.1.3 Synthesis of NiCoZnP/C material	174
7.1.4 Synthesis of NiP/NG, FeP/NG catalysts	175
7.1.5 Synthesis of FMC/CB	176
7.2 Electrochemical Measurements	177
7.2.1 Procedure of preparing electrodes.....	177
7.2.2 Measurement of supercapacitor	177

7.2.3 Quasi-solid-state, flexible supercapacitor device assembly	177
7.2.4 Electrocatalytic water splitting reaction	178
7.2.5 Electrocatalytic nitrate reduction reaction (NO ₃ RR)	178
7.2.6 Aqueous rechargeable Zn-nitrate electrochemical cell	179
7.3 Characterization technique	179
7.3.1 Transmission Electron Microscopy (TEM)	179
7.3.2 Scanning Electron Microscopy (SEM)	180
7.3.3 X-Ray Diffraction (XRD)	180
7.3.4 X-Ray Photoemission Spectroscopy (XPS)	180
7.3.5 UV-Vis Absorption Spectroscopy.....	180
7.3.6 Inductively Coupled Plasma Optical Emission Spectrometry (ICP-OES)	181
7.3.7 Fourier Transformed Infrared Spectroscopy (FTIR).....	181
7.3.8 Proton Nuclear Magnetic Resonance (¹ H NMR).....	181
7.3.9 Gas Chromatography (GC)	181
7.3.10 X-ray absorption fine structure (XAFS) spectra.....	181
7.4 Other procedures.....	182
7.4.1 Calculation of capacitance, energy density and power density for supercapacitors.....	182
7.4.2 Determination of ammonia, NO ₂ ⁻ , N ₂ H ₄	183
7.4.3 Computational method	184
7.5 References	186
Chapter 8. Conclusions	189
Dissemination.....	195
