Abstract	v
Contents	xii
1 Introduction	1
2 Achieving optimal order in a novel family of numerical methods	9
2.1 Introduction	12
2.2 Convergence Analysis of the Family	15
2.3 Stability Analysis	20
2.3.1 Rational operator	21
2.3.2 Fixed Points	22
2.3.3 Critical Points	25
2.3.4 Dynamical Planes	27
2.4 Numerical Results	29
2.4.1 First Experiment: Stability Analysis of MCCTU( $\alpha$ ) Family	31
2.4.2 Second Experiment: Efficiency Analysis of MCCTU( $\alpha$ ) Family	34
2.5 Conclusions	52
2.6 Appendix	53
2.6.1 Detailed Computation of Theorem 2.2	53

2.6.2 Detailed Computation of Theorem 2.3 . . . . .	53
2.6.3 Additional Experiment Focused on Practical Calculations . . . . .	54
<b>3 Chaos and stability in a new iterative family for solving nonlinear equations</b>	<b>57</b>
3.1 Introduction . . . . .	60
3.2 Convergence of the New Family. . . . .	61
3.3 Complex Dynamical Behavior . . . . .	67
3.3.1 Rational Operator . . . . .	68
3.3.2 Analysis and Stability of Fixed Points . . . . .	69
3.3.3 Analysis of Critical Points . . . . .	71
3.3.4 Parameter Spaces. . . . .	72
3.3.5 Dynamical Planes. . . . .	74
3.4 Numerical Results . . . . .	77
3.4.1 First Experiment: Efficiency Analysis of $CMT(\alpha)$ Family. . . . .	78
3.4.2 Second Experiment: Stability Analysis of $CMT(\alpha)$ Family . . . . .	83
3.5 Conclusions. . . . .	89
<b>4 Performance of a new sixth-order class of iterative schemes for solving non-linear systems</b>	<b>91</b>
4.1 Introduction . . . . .	94
4.2 Convergence Analysis of the Family . . . . .	95
4.3 Real Dynamics for Stability . . . . .	101
4.3.1 Rational operator . . . . .	101
4.3.2 Fixed points and their stability . . . . .	103
4.3.3 Dynamical planes . . . . .	104
4.4 Numerical Results . . . . .	109
4.5 Conclusions. . . . .	114
<b>5 General discussion of the findings</b>	<b>115</b>
<b>6 Conclusions and future research directions</b>	<b>119</b>
6.1 Conclusions. . . . .	121
6.2 Future research directions . . . . .	122
