

Table Of Contents

1. Introduction.

- 1.1. Foreword.
- 1.2. Statement of Objectives.
- 1.3. Thesis Outline.

2. Introduction of Neutronics Methods and Techniques.

- 2.1. Introduction.
- 2.2. Neutronics Governing Equations.
 - 2.2.1. Neutron Transport Calculations.
 - 2.2.2. Diffusion Approximation.
 - 2.2.3. Numerical Methods.
 - 2.2.3.1. Deterministic.
 - 2.2.3.2. Monte Carlo.
 - 2.2.4. Nuclide Depletion Calculations.
- 2.3. Nuclear Data for the Solution of the Neutronics Equations.
 - 2.3.1. Continuous Energy.
 - 2.3.2. Energy Collapsing.
- 2.4. Lattice Calculation.
 - 2.4.1. Homogenization of Cross-sections.
 - 2.4.2. Cross-section Libraries.
 - 2.4.3. Representation of Cross-section Libraries.
- 2.5. Reactivity Feedback.
- 2.6. Summary.

3. Impact of Nuclear Data Processing - State-of-the-Art.

- 3.1. Introduction.
- 3.2. Reactor Core Analysis.
 - 3.2.1. Standard Industrial Reactor Core Analysis.
 - 3.2.2. Thermal-Hydraulic and Neutronics Coupled Calculations.
- 3.3. Transient Analysis.
 - 3.3.1. Transient Analysis in the Context of Chapter 15 of the NRC Standard Review Plan.
 - 3.3.1.1. Relevance to Boiling Water Reactors.
 - 3.3.2. DEC-A Transients: Anticipated Transients Without Scram (ATWS).
 - 3.3.2.1. ATWS Historical Background.
 - 3.3.2.2. Acceptance Criteria.
 - 3.3.3. State-of-the-Art of BWR ATWS Simulations.
- 3.4. Standard Codes for Reactor Core and Transient Analyses.
 - 3.4.1. CASMO-4.
 - 3.4.2. SIMULATE-3.
 - 3.4.3. GenPMAXS.
 - 3.4.4. PARCS.
 - 3.4.5. TRAC-BF1/BE.
- 3.5. Summary.

4. Cross-Section Generation & Modeling for BWRs.

- 4.1. Introduction.
- 4.2. Cross-section Modeling.
 - 4.2.1. Instantaneous Effect.
 - 4.2.2. History Effect.
 - 4.2.3. Control Rod Effect.
- 4.3. Reflector Modeling.
- 4.4. Overview of PARCS Cross-section Model.
- 4.5. PMAXS: Cross-section Files for PARCS.
 - 4.5.1. Generating Branches.
 - 4.5.2. Generating Histories.
 - 4.5.3. PMAXS Data Structure.
- 4.6. Generating PMAXS Files from CASMO-4.
 - 4.6.1. Verification and Validation Procedure of the PMAXS Files.
- 4.7. Cross-section Generation Guidelines for BWRs.
- 4.8. Summary.

5. Cross-section Modeling. Code-to-Code Results.

- 5.1. Introduction.
- 5.2. Study Cases: Cycles A & B.
- 5.3. PARCS Model.
- 5.4. Cross-section Reference Library Set – Set 1.
- 5.5. Core-Follow Analysis.
 - 5.5.1. Cross-section Reference Library Set 1 Results.
 - 5.5.2. Analysis of the Influence of the Instantaneous/History Effect.
 - 5.5.3. Analysis of the Influence of the Burnup Mesh Points.
- 5.6. Core-Follow Cycle B Results.
 - 5.6.1. Coast-down Conditions Modeling.
- 5.7. Summary & Conclusions.

6. Cross-section Modeling. Code-to-TIPs Results.

- 6.1. Introduction.
- 6.2. Traversing In-Core Probe (TIP) Description.
- 6.3. TIPs Plant Measurements.
- 6.4. PARCS TIP Response Calculations.
 - 6.4.1. BOC Condition Results.
 - 6.4.2. MOC Condition Results.
 - 6.4.3. EOC Condition Results.
- 6.5. Summary & Conclusions.

7. Cross-section Impact on DEC-A ATWS Transient Analysis.

- 7.1. Introduction.
- 7.2. Description of the Simulated ATWS Scenarios.
 - 7.2.1. ATWS Scenario 1.
 - 7.2.2. ATWS Scenario 2.
 - 7.2.3. Figures-of-Merit.
- 7.3. Model Features.
 - 7.3.1. TRAC-BF1/BE Model.
 - 7.3.2. PARCS Model.
- 7.4. Methodology & Computational Basis.
 - 7.4.1. Initial Conditions.
- 7.5. Steady-State Results.
- 7.6. MSIVC ATWS Scenario 1.
 - 7.6.1. Comparison 1D Kinetics vs. 3D Kinetics.
- 7.7. MSIVC ATWS Scenario 2.
 - 7.7.1. Comparison Set 1 vs. Set Atws Libraries.
- 7.8. Summary.

8. Conclusions & Future Work.

- 8.1. Conclusions.
- 8.2. Future Work.

9. References.
