

Table of contents

Acknowledgments	II
Abstract.....	V
Resumen	VI
Resum	VII
Abbreviations	X
General introduction	1
1. Stress in plants	1
1.2. The general response of plants to stress	3
1.2.1. Physiological, biochemical and molecular responses to drought stress	5
1.2.2. Physiological, biochemical and molecular responses to salt stress	7
2. Climate change and stress in agriculture	10
3. Strategies for improving stress tolerance to abiotic stress	11
3. 1. Metabolomics and taste	12
4. Broccoli	13
5. Melon	13
6. Sulfur assimilation in a stress tolerance framework	14
Objectives	20
Chapter I	23
Abstract	24
Introduction	25
Materials and Methods	28
<i>Plant Material and treatments</i>	28
<i>Physiological measurements</i>	28
<i>Amino acid analysis</i>	29
<i>Ion content determination</i>	29
<i>Hormone determinations</i>	29
<i>Metabolomic analysis</i>	30
<i>Statistical Analysis</i>	31
Results	32
<i>Physiological measurements</i>	32
<i>Glutathione and free amino acids</i>	33
<i>Levels of essential amino acids in florets</i>	38
<i>Sodium and potassium content</i>	38

<i>Hormone determination</i>	38
<i>Primary metabolite analysis</i>	41
Discussion	43
Chapter II.....	50
Abstract	51
Introduction	52
Materials and methods	55
<i>Plant material and experimental conditions</i>	55
<i>Physiological measurements</i>	55
<i>Amino acid analysis</i>	56
<i>Hormone quantification</i>	56
<i>Ion content determination</i>	57
<i>Primary metabolite analysis</i>	57
<i>Statistical design and analysis</i>	57
Results	59
<i>Physiological measurements</i>	59
<i>Free amino acids</i>	60
<i>Hormone measurements</i>	64
<i>Sodium and potassium determination</i>	64
<i>Primary metabolite analysis</i>	65
Discussion	68
Chapter III.....	77
Abstract	78
Introduction	79
Materials and methods	81
<i>Plant material</i>	81
<i>Experimental design</i>	81
<i>Physiological measurements</i>	81
<i>Amino acid analysis</i>	82
<i>Hormone quantification</i>	82
<i>Ion content determination</i>	83
<i>Statistical analysis</i>	83
Results	84
<i>Physiological determinations</i>	84
<i>Amino acid measurements</i>	86
<i>Sodium and potassium content</i>	90
<i>Hormone determination</i>	92

Discussion	95
Chapter IV	101
Abstract	102
Introduction	103
Materials and Methods	105
<i>Plant Material and Treatments</i>	105
<i>Metabolite analysis</i>	105
<i>Statistical analysis</i>	105
Results	107
<i>Determination of the metabolite content</i>	107
Correlations between metabolites and tasting score.....	108
<i>Principal component analysis (PCA) of the data</i>	110
Discussion	112
Chapter V.....	117
Abstract	118
Introduction	119
Materials and methods	122
<i>Bioinformatics Analysis</i>	122
<i>Plant materials and growth conditions</i>	122
<i>Gene expression analysis</i>	122
<i>Plasmid construction</i>	123
<i>Yeast growth and complementation assay</i>	124
<i>Determination of low molecular weight sulphhydryls (LMWS)</i>	124
<i>Determination of enzymatic activity</i>	125
<i>Subcellular localization in Saccharomyces cerevisiae</i>	125
<i>Subcellular localization in Nicotiana benthamiana</i>	126
Results	127
<i>Identification of SAT enzymes in broccoli</i>	127
<i>Analysis of predicted cis regulatory elements in the promoters of BoSAT genes</i> 131	
<i>Tissue-specific expression of SAT genes in Brassica oleracea</i>	134
<i>Expression of BoSAT genes under osmotic stress</i>	134
<i>BoSAT enzyme activity characterization in yeast</i>	137
<i>Subcellular localization of BoSATS</i>	139
Discussion	142
General discussion.....	159
1. Molecular and physiological distinctive traits for drought stress tolerance in broccoli and melon	159

2. Molecular and physiological distinctive traits for salt stress tolerance in broccoli and melon	160
3. Metabolomics and taste in broccoli	162
4. Characterization of the serine O-acetyltransferases enzymes in broccoli	162
Conclusions	168
References	171

List of figures

General introduction

Figure 1. Mechanisms of stress signalling, with particular focus on points of convergence between abiotic and biotic stress	4
Figure 2. World production of crops in billions of tonnes and its economic value in trillions of USD.	11
Figure 3. Initial steps of the sulfur assimilation pathway in plants.	15
Figure 4. Enzymatic pathways in cysteine biosynthesis and an overview of the functions of cysteine in plant metabolism	16
Figure 5. Model for regulatory function of the cysteine synthesis complex under sulfate availability or limitation	16

Chapter I

Figure 1. Physiological measurements.	33
Figure 2. Glutathione, sulfur containing amino acids and serine determination.	34
Figure 3. Amino acids which can act as osmolytes or with differential patterns between stress-sensitive and stress-tolerant cultivars	35
Figure 4. Amino acids with similar patterns between stress-sensitive and stress-tolerant cultivars	37
Figure 5. Determination of essential amino acids in florets.	39
Figure 6. Ion content determination.	40
Figure 7. Hormone levels	41
Figure 8. Levels of primary metabolites with differential patterns among cultivars	42
Figure S1. Representative plants of each cultivar under normal watering or after 6 days of drought stress.	46
Figure S2. Summary of the main findings of this study.	47

Chapter II

Figure 1. Physiological measurements.	60
Figure 2. Glutathione, sulfur containing amino acids and serine determination.	61
Figure 3. Amino acids with differential accumulation patterns between stress sensitive and stress tolerant cultivars.	62

Figure 4. Amino acids with similar accumulation patterns between stress sensitive and stress tolerant cultivars.	63
Figure 5. Hormone content.	64
Figure 6. Ion content determination.	65
Figure 7. Content of primary metabolites related to the Krebs cycle.	66
Figure 8. Content of primary metabolites altered by salt stress.	67
Figure 9. Summary of the main findings of this study.	70

Chapter III

Figure 1. Physiological measurements.	86
Figure 2. Hydrophobic amino acids	87
Figure 3. Polar amino acids	89
Figure 4. Charged amino acids.	90
Figure 5. Ion content determination.	91
Figure 6. Hormone levels	93
Figure 7. Summary of main findings of this study	94

Chapter IV

Figure 1. Radial diagram of the metabolite amounts of the different cultivars.	107
Figure 2. Variability of primary metabolites in different broccoli cultivars.	108
Figure 3. Correlation coefficient (R^2) between each analyzed metabolite and the tasting score.	109
Figure 4. Regression analysis for the two metabolites with the highest correlation. ...	110
Figure 5. PCA results.	110

Chapter V

Figure 1. Phylogenetic tree, gene structure and syntenic relationship between <i>Arabidopsis thaliana</i> and SAT enzymes and their homologues in broccoli (<i>Brassica oleracea</i> var. <i>italica</i>).	128
Figure 2. Alignment of AtSAT and BoSAT protein sequences.	131
Figure 3. Comparative 3D structures between the SATs present in Arabidopsis and their rthologues in broccoli.	131
Figure 4. Analysis of the promoter TATA-boxes and cis-elements of BoSATs.	133

Figure 5. Expression pattern of BoSATs in different tissues under control conditions and water stress.....	136
Figure 6. BoSAT activity <i>in vivo</i>	139
Figure 7. Subcellular localization of BoSATs in yeast.	140
Figure 8. Subcellular localization of BoSATs in <i>N. Benthamiana</i> protoplasts.....	141
Figure S1. Effect of Venus tagging on BoSAT activity	153
Figure S2. BoSAT raw enzymatic activity and expression levels upon over-expression in yeast.....	153
Figure S3. Subcellular localization in yeast.	154
Figure S4. Subcellular localization in <i>N. benthamiana</i>	156

List of tables

Chapter II

Table 1. Summary statistics of the general linear model and p-values for the effect of treatments (control and salinity), degree of sensitivity to salinity (sensitive and tolerant), cultivars within sensitivities and the interaction between treatments and degree of sensitivity on broccoli plant performance.	70
---	----

Chapter V

Table 1. SAT members in <i>Brassica oleracea</i>	146
Table 2. Characterization of BoSATs, indicating the <i>Arabidopsis thaliana</i> homologue in the first column.	148
Table S1. qPCR primers used in this work.	149
Table S2. Plasmids used in this work.	150
Table S3. Oligonucleotides used to generate the plasmids of this work.	151

General discussion

Table 1. Physiological and biochemical markers for stress tolerance to drought and salt stress.	161
