

TABLE OF CONTENTS

Abstract	iii
Resumen	iv
Resum	v
Résumé	vi
Dedication	vii
List of Figures.....	xvii
List of Tables	xxv
Acknowledgments	xxvii
Chapter 1 Introduction.....	1
1.1 Wireless Sensor Networks	1
1.2 Research Aims	4
1.3 Previous Works.....	5
1.4 Main Contributions.....	6
1.5 Structure of the Thesis.....	8
Chapter 2 State of Art in WSNs with Group Topologies	11
2.1 Introduction	11
2.2 Group-based Topologies	14
2.3 Collaboration in Group-based Topologies	19
2.4 Security in Group-based Topologies	21

2.5	Synchronization in Group-based Topologies	22
2.6	Group-based Applications Environment	24
2.7	Conclusion	25
Chapter 3 Group-based Topologies Performance Study		27
3.1	Introduction	27
3.2	Test Bench	27
3.3	Average Delay at Application Layer	28
3.4	Routing Traffic Received	32
3.5	Throughput	36
3.6	Group-based Topologies Comparison	39
3.7	Analyzed Protocols Summary	45
3.8	Conclusion	47
Chapter 4 Group-based Architecture and Protocol for WSNs		49
4.1	Introduction	49
4.2	Group-based Architecture Operation	51
4.2.1	Node's Role	53
4.3	Group-based Architecture Analysis	55
4.3.1	Analytical Model and Neighbor Selection	55
4.3.2	Number of Nodes according to Group's Topology	58
4.4	Messages	60
4.4.1	Hello Message	60
4.4.2	HelloACK Message	60
4.4.3	NewHead Message	61
4.4.4	FatherChosen Message	61

4.4.5	NewSonInformation Message	62
4.4.6	HeadChange Message.....	63
4.4.7	AbandonGroup Message	63
4.4.8	DescendentLeft Message.....	64
4.4.9	KeepAlive Message.....	64
4.5	Group-based Protocol Operation.....	65
4.5.1	Group Creation and Maintenance	65
4.5.2	Leavings and Fault Tolerance	70
4.5.3	Connection between Groups.....	72
4.6	Connection Time Simulations.....	72
4.6.1	Connection Time Variation when Groups have Same Number of Hops	74
4.6.2	Connection Time Variation when Number of Hops to Cross Groups Varies	74
4.6.3	Connection Time Variation for Different Number of Groups and Different Distances between Source and End Nodes in a Group	76
4.6.4	Connection Time for Getting a Destination Group according to Groups' Diameter.....	76
4.7	Network Comparison	78
4.8	Conclusion	78
Chapter 5 Group-based Architecture and Protocol Implementation		81
5.1	Introduction	81
5.2	Tools and Programming Language	82
5.2.1	OMNeT++	82
5.2.1.1	Modeling Concepts.....	83
5.2.1.2	Programming the Algorithms.....	84

5.3	Structure of Group-based Architecture Implementation	86
5.4	Implementation's Test.....	92
5.4.1	Test Bench	95
5.4.2	Logging Events.....	96
5.4.2.1	Group Creation	97
5.4.2.2	Head Change	97
5.4.2.3	Group Leaving.....	98
5.4.3	Results.....	99
5.4.3.1	Lineal Topology	99
5.4.3.2	Ring Topology	102
5.4.3.3	Mesh Topology.....	105
5.4.3.4	XML Topology	107
5.5	Conclusion	109
Chapter 6 Collaborative Group-based WSNs.....		111
6.1	Introduction	111
6.2	Regular Architectures vs. Collaborative Group-based Architectures for WSN	112
6.3	Energy Analysis in a Collaborative Group-based WSN	118
6.3.1	Analytical Comparison.....	120
6.4	Efficient Communications in a Collaborative Group-based WSN	121
6.4.1	Analytical Comparison.....	122
6.4.2	Collaborative Group-based Network Simulation	124
6.5	Intergroup Communications in Group-based Wireless Sensor Networks	131
6.5.1	Intergroup Communication Algorithm.....	132

6.5.2	Simulation and Results.....	134
6.6	Taking Decisions in a Collaborative Group-based WSN.....	137
6.6.1	Simulation of the Collaborative Decision System.....	140
6.7	Conclusion	141
Chapter 7 Security and Intragroup Time Synchronization in Group-based WSNs		143
7.1	Introduction	143
7.2	Group-based Secure Algorithm	145
7.2.1	Secure Network	145
7.2.2	Encryption Algorithms	146
7.3	Operation and Key Distribution.....	149
7.3.1	Secure Group Creation and its Maintenance	149
7.3.2	Key Management when a Node Changes to Another Group.....	150
7.4	Measurements	152
7.5	Time Synchronization: Techniques and Features	154
7.5.1	Why a WSN needs Time Synchronization?	154
7.5.2	Synchronization Types used in WSNs	154
7.5.3	Error Sources in Time Synchronization.....	156
7.6	Intragroup Secure Time Synchronization	157
7.6.1	Test Performance	160
7.7	Conclusion	163
Chapter 8 Group-based Sensor Network for Managing and Controlling Marine Fish Farms		165
8.1	Introduction	165
8.2	Existing Monitoring Systems	167

8.3	Problem description and motivation	168
8.4	Seabed depositions estimation for sensor placement.....	169
8.5	Sensor network proposal.....	173
8.5.1	Temperature sensors	175
8.5.2	Oxygen sensors.....	176
8.5.3	Displacement speed sensors	176
8.5.4	Biomass distribution placement sensors.....	176
8.5.5	Seabed sustainability sensors.....	176
8.5.6	Outside sensors.....	177
8.6	Group-based seabed network	177
8.6.1	Group-based topology.....	178
8.6.2	Inter-Group and Intra-Group Communication	180
8.6.3	Simulations of group-based seabed network.....	182
8.6.3.1	Test bench.....	183
8.6.3.2	Network simulation with 68 nodes.....	183
8.6.3.3	Network simulation with 200 nodes.....	186
8.6.3.4	A forwarding sensor node in a network of 68 sensor nodes.....	188
8.6.3.5	A forwarding sensor node in a network of 200 sensor nodes.....	189
8.7	Distributed sensor data fusion system.....	190
8.7.1	System architecture and its operation.....	190
8.7.2	Statistical analysis	193
8.7.3	Sensor data fusion system simulations	194
8.8	Conclusion	199

Chapter 9 Conclusion and Future Work.....	201
9.1 Introduction	201
9.2 Conclusions and Contributions	202
9.3 Future Research Work.....	204
Bibliography	207
