ABSTRACT 1

RESUMEN 3

RESUM 5

GENERAL INTRODUCTION 7

LITERATURE REVIEW 13

1. Intramuscular fat and meat quality 15

1.1. Intramuscular fat and other fat depots

1.2. Meat quality

1.2.1. Concepts of meat quality

1.2.2. Rabbit meat quality

1.3. The role of intramuscular fat in meat quality

1.3.1. Eating quality

1.3.2. Nutritional value

1.3.3. Technological quality

1.4. Intramuscular fat as a way to improve meat quality

2. The use of Near Infrared Reflectance Spectroscopy to assess intramuscular fat content 22

2.1. NIRS concepts

2.2. Application of NIRS to predict intramuscular fat content

2.3. Application of NIRS to predict other meat quality characteristics

2.4. Other non-invasive methods to assess intramuscular fat content

2.4.1. Real-time utrasound scanning

2.4.2. Computed tomography

2.4.3. Video image analysis

3. Genetic strategies to improve intramuscular fat content 29

3.1. Breed crosses

3.2. Selection for intramuscular fat content

3.3. Genomic apporoach

4. Literature cited 33

OBJECTIVES 45

CHAPTER 1. Application of NIRS for predicting fatty acids in intramuscular fat of rabbits 49

CHAPTER 2. Use of NIRS for intramuscular fat selection in rabbits 65

CHAPTER 3. Divergent selection for intramuscular fat content 77

I. Direct response to selection on intramuscular fat content 79

II. Correlated responses on carcass and meat quality traits 93

GENERAL DISCUSSION 113

CONCLUSIONS 117
