CONTENTS

RESUMEN i
RESUM iii
ABSTRACT v
INTRODUCTION ix

Chapter 1. Preliminaries and Notation 1
1.1. Measures and spaces 1
1.1.1. Vector measures 1
1.1.2. Banach lattices and Banach function spaces 2
1.1.3. $L^p(m)$ spaces and optimal domains 4
1.1.4. The $p$-th power space 5
1.2. Operators 8
1.2.1. The $p$-th power factorable operators 8
1.2.2. Kernel operators 11

Chapter 2. Generalized Köthe Dual Space 13
2.1. The Köthe $p$-dual space 13
2.1.1. Computation rules for the Köthe $p$-dual space 14
2.1.2. The Köthe $p$-adjoint operator 16
2.2. Some geometrical aspects 18
2.2.1. Convexity and concavity 19
2.2.2. Type and cotype

Chapter 3. Optimal Range Theorem

3.1. The adjoint and Köthe adjoint operators
3.2. Optimal range theorem
3.2.1. Applications of the optimal range theorem
3.2.2. The optimal range for the Volterra operator

Chapter 4. (p, q)-th Power Factorable Operators

4.1. The (p, q)-th power factorable operators
4.1.1. Characterizations for (p, q)-th power factorable operators
4.1.2. Another related result
4.2. The non finite measure case

Chapter 5. Applications of (p, q)-th Power Factorable Operators

5.1. Complex interpolation for operators
5.1.1. Definitions and notation
5.1.2. Interpolation for p-th power factorable operators
5.1.3. Interpolation for (p, q)-th power factorable operators
5.2. (p, q)-th power factorable kernel operators
5.2.1. Hölder’s type inequality
5.2.2. Hille-Tamarkin operators

Chapter 6. An Optimal Domain for the Laplace Transform

6.1. Introduction
6.2. The vector measure
6.2.1. An embedding property
6.2.2. An estimate for the norm
6.3. Factorization and optimal domain
6.3.1. The (p, q)-th power factorization
6.3.2. Final remarks and example
