

FORMWORKS IN BASEMENT WALLS

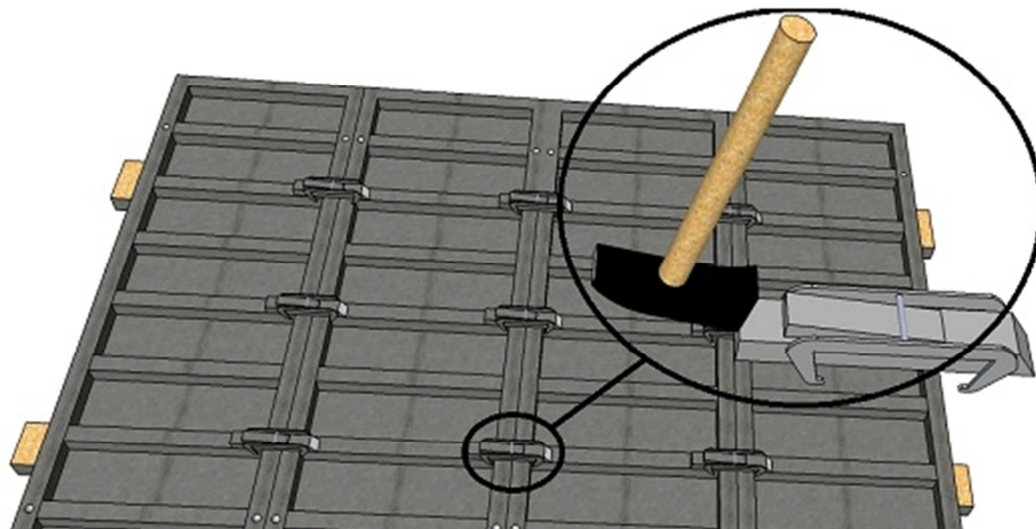

STEPS

1. Receipt of formworks

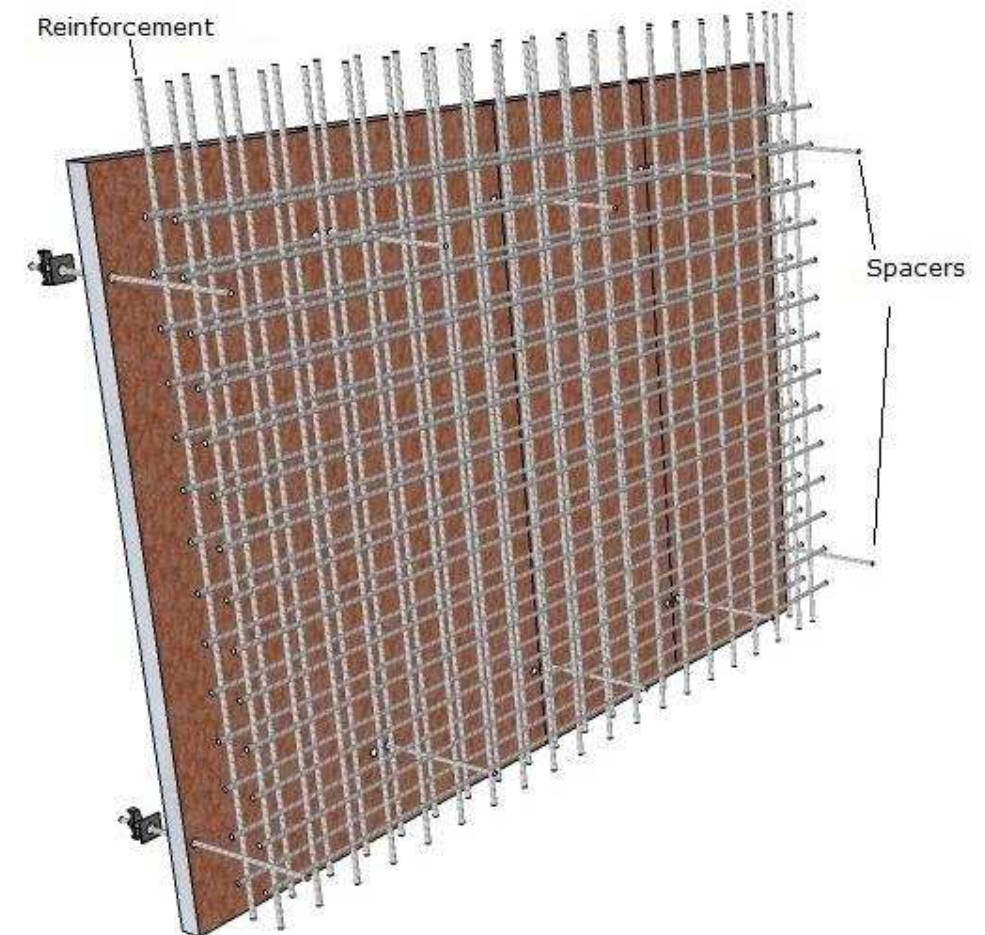

The following elements are needed in order to use correctly the formworks:

2. - Joining the panels that will form the wall.
- Fix the panels between them with the wedges.

3. When one of the Wall faces is mounted, proceed to install the reinforcement.

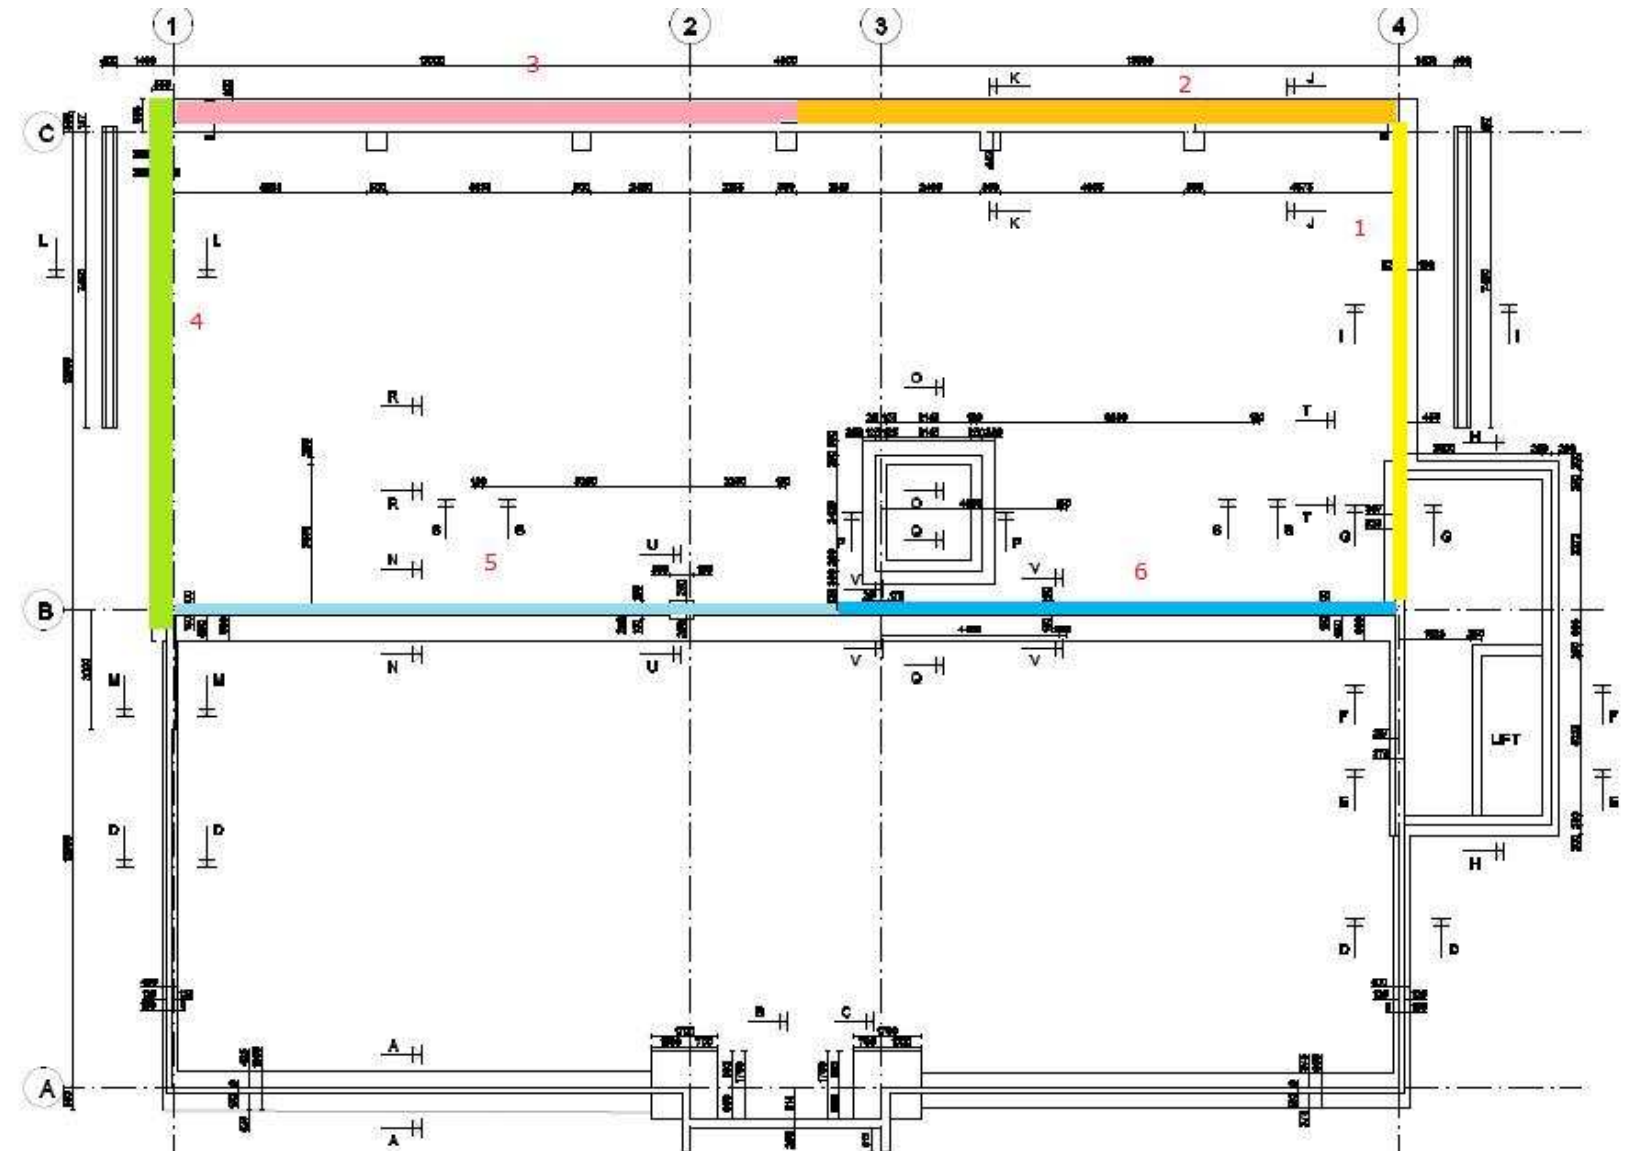

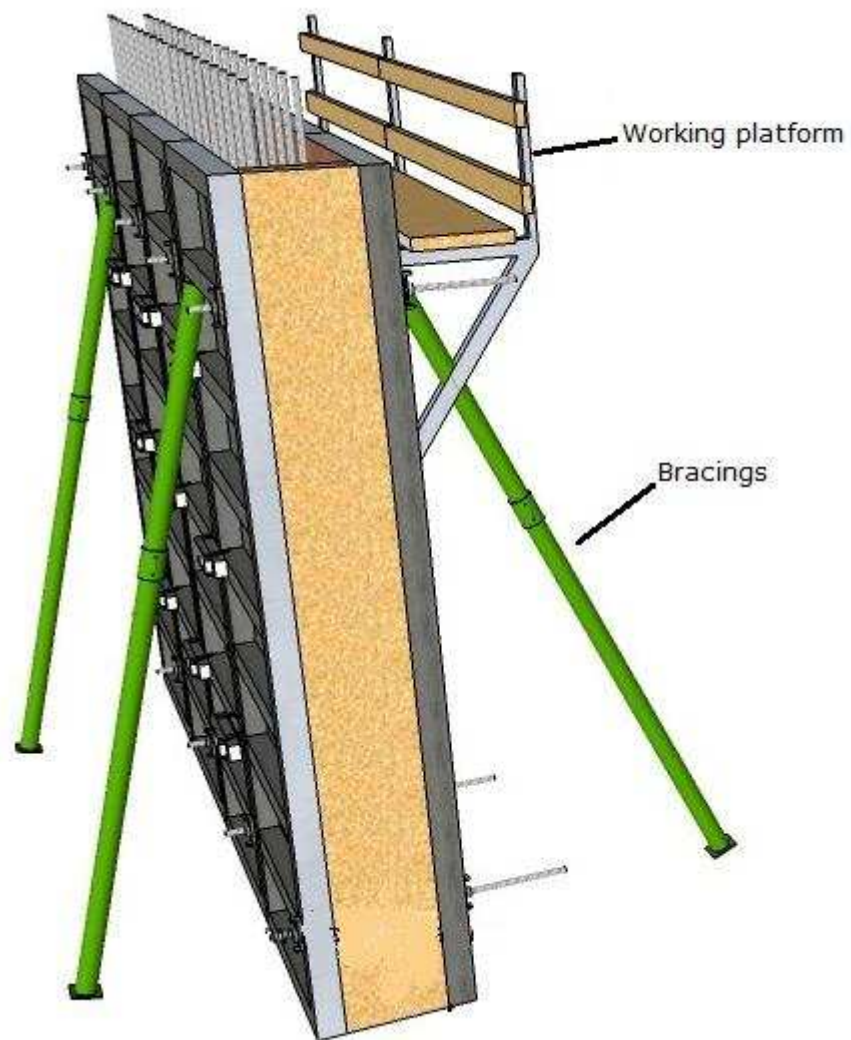

- When the panels are ready proceed to put them in their place with the help of struts for attachment.

4. Mount the other face of the formwork.

5. Fix the other face of the formwork to the first one.

ORDER OF EXECUTION

Press the formworks and connect them with the spacers.

- 6.
- Check the verticality of the wall
 - Prepare the working platform with the required safety elements.
 - Pour the concrete
 - Wait between 24 and 48 hours for stripping
