Contents

Abstract **vii**

1 Introduction **1**
1.1 Motivation and background 2
1.1.1 Linear VS nonlinear 2
1.1.2 Control problems in nonlinear systems 3
1.2 Scope and objectives 4
1.3 Structure of the thesis 5

I State of the Art **7**

2 Takagi-Sugeno Fuzzy Systems **9**
2.1 Takagi-Sugeno fuzzy modelling 10
2.1.1 Sector Nonlinearity approach 12
2.2 Stability analysis 13
2.2.1 Lyapunov stability 13
2.2.2 Fuzzy systems' stability 16
2.3 Control design 18
2.3.1 Parallel distributed compensator 18
2.3.2 Further developments 19
2.3.3 Observer design 20
2.4 Nominal performance and LMI's 22
2.4.1 $\mathcal{H}_2$ performance 22
2.4.2 $\mathcal{H}_\infty$ performance 25
2.4.3 Decay Rate 27
2.4.4 Guaranteed cost 27

2.5 Discussion 29
2.6 Conclusions 30

3 Fuzzy Polynomial Systems 31
3.1 Polynomial fuzzy modelling 32
3.1.1 Taylor-series based polynomial fuzzification 33
3.1.2 State growing by recasting nonlinearities 37
3.2 Stability analysis via sum of squares 39
3.2.1 Global stability 40
3.2.2 Local stability 42
3.3 Fuzzy-Polynomial Stabilization 45
3.3.1 Controller design 45
3.3.2 Observer design 47
3.4 Discussion 51
3.5 Conclusions 52

II Contributions 53

4 Domain of Attraction Estimation 55
4.1 Preliminaries 56
4.1.1 Problem statement 58
4.2 Prefixed-shape DA estimation 60
4.2.1 Local fuzzy polynomial models 61
4.2.2 Local stability analysis 63
4.2.3 Domain of attraction expansion 68
4.3 Iterative DA estimate expansion 70
4.3.1 Auxiliary lemmas 71
4.3.2 Discrete-time DA estimation 72
4.3.3 DA estimation in continuous-time systems 76
4.4 Examples 83
4.5 Conclusions 101

5 Inescapable-set Estimation with Nonvanishing Disturbances 103
5.1 Problem statement 104
5.2 Invariant sets under nonvanishing disturbances 106
5.2.1 Application to local fuzzy models 108

5.3 Inescapable-set issues in stabilization 112
5.4 Example 116
5.5 Conclusions 119

6 Local Fuzzy Polynomial Observers 121
6.1 Preliminaries 122
6.1.1 Problem statement 123
6.1.2 Notation 125
6.2 Observer design under vanishing disturbances 126
6.3 $\mathcal{H}_\infty$ polynomial observer design 130
6.3.1 Stability and performance analysis 130
6.3.2 Direct discrete-time design 133
6.3.3 Continuous-time based design 136
6.4 Example 138
6.5 Conclusions 142

7 Discrete-time Control Synthesis with Input Saturation 145
7.1 Preliminaries 146
7.1.1 Problem statement 147
7.2 Synthesis via delayed-state Lyapunov functions 149
7.2.1 Extension to fuzzy-polynomial systems 154
7.3 Example 156
7.4 Conclusions 158

III Experimental Applications 159

8 State Estimation in a 3DoF Electromechanical Platform 161
8.1 Description and modelling of the test setup 163
8.1.1 Fuzzy modelling 164
8.2 Observer design 167
8.3 Design compromises in practice 169
8.3.1 Disturbance rejection vs. decay trade-off 169
8.3.2 Proposed methodology 171
8.3.3 Choice of disturbance size parameters 172
8.4 Results 173
8.4.1 Pareto-front results 175

8.4.2 Evaluation of final design 177
8.5 Conclusions 182

9 Parameter Estimation in the Air Path of a TCSI Engine 185
9.1 System description 187
9.2 Fuzzy polynomial modelling of the air path system 190
9.3 Observer design 192
9.4 Experimental evaluation 195
9.5 Conclusions 198

Conclusions of the thesis 201

Bibliography 205

Appendices 220

A Semidefinite and SOS Programming 223
A.1 Linear Matrix Inequalities 223
A.1.1 Schur complement 224
A.1.2 S-procedure 225
A.1.3 Finsler's lemma 226
A.1.4 Nonconvex matrix inequality problems 226
A.1.5 Numerical resolution 227
A.2 Sum Of Squares 228
A.2.1 Positive polynomials: an outline 228
A.2.2 Positivstellensatz 230
A.2.3 SOS matrices 232
A.2.4 SOS problems 233
A.2.5 Numerical resolution 234
A.2.6 Code of examples 236

B Proofs 243
B.1 Proof of Proposition 2.1 243
B.2 Proof of Lemma 3.1 244
B.3 Proof of Theorem 3.1 244
B.4 Proof of Theorem 6.3 245
