

# Contents

1	Overview	9
	1.1 The quantisation paradigm	9
	1.2 Emergent quantum mechanics	11
	1.3 Emergent gravity	13
	1.4 Structure of this PhD thesis	14
2	An entropic picture	15
	2.1 Introduction	15
	2.2 Holographic screens as entropy reservoirs	16
	2.2.1 A quantum of entropy	16
	2.2.2 Two thermodynamical representations	16
	2.2.3 A holographic dictionary	18
	2.3 The energy representation	19
	2.4 The entropy representation	21
	2.4.1 Action vs. entropy	21
	2.4.2 Quantum states vs. holographic screens	21
	2.4.3 The entropic uncertainty principle	22
	2.4.4 The entropic Schroedinger equation	23
	2.4.5 The fundamental equation, the equation of state, and equipartition	26
	2.4.6 Planck vs. Boltzmann, or $\sim$ vs. $k_B$	27
	2.4.7 The second law of thermodynamics, revisited	27
	2.5 Conclusions to chapter 2	29
	2.5.1 Quantum mechanics as a holographic, emergent phenomenon	29
	2.5.2 Quantum mechanics in the absence of spacetime	31
	2.5.3 Open questions	31
3	A picture of irreversibility	33
	3.1 Introduction	33
	3.2 The Chapman–Kolmogorov equation in quantum mechanics	33
	3.3 Fluctuations and irreversible processes	35
	3.3.1 Thermodynamic forces	35
	3.3.2 Fluctuations	37
	3.3.3 Markov processes	38
	3.3.4 Gaussian processes	38
	3.4 Quantum mechanics from irreversible thermodynamics	40
	3.4.1 Path integrals in irreversible thermodynamics	40
	3.4.2 Propagators from thermodynamical distributions	41
	3.4.3 Integrability vs. square–integrability	42
	3.4.4 Entropy vs. action	45
	3.5 Conclusions to chapter 3	46
4	Overall summary	49
