

# Contents

<b>Contents</b>	<b>xiii</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Thesis objectives and structure . . . . .	3
<b>2 The multipactor phenomenon</b>	<b>7</b>
2.1 Secondary Electron Emission effect . . . . .	11
2.2 Saturation . . . . .	16
2.3 Single-carrier and multi-carrier signals . . . . .	18
2.4 State of the art . . . . .	20
2.4.1 Necessary conditions . . . . .	20
2.4.2 Techniques against Multipactor . . . . .	20
2.4.3 Multipactor design and test . . . . .	22
2.4.3.1 Multipactor prediction . . . . .	22
2.4.3.2 Multipactor test . . . . .	24
<b>3 Article index</b>	<b>29</b>
3.1 Long-term multipactor discharge in multicarrier systems . .	29
3.1.1 Bibliographic record . . . . .	29
3.1.2 Abstract . . . . .	29
3.2 RF breakdown prediction for microwave passive components in multi-carrier operation . . . . .	30
3.2.1 Bibliographic record . . . . .	30
3.2.2 Abstract . . . . .	30
3.3 Non-stationary Statistical Theory for Multipactor . . . . .	31
3.3.1 Bibliographic record . . . . .	31
3.3.2 Abstract . . . . .	31
3.4 Multipactor theory for multi-carrier signals . . . . .	31
3.4.1 Bibliographic record . . . . .	31
3.4.2 Abstract . . . . .	32

3.5	Prediction of Multipactor Breakdown for Multi-carrier Applications: The Quasi-stationary Method . . . . .	32
3.5.1	Bibliographic record . . . . .	32
3.5.2	Abstract . . . . .	33
<b>4</b>	<b>Article list</b>	<b>35</b>
4.1	Long-term multipactor discharge in multicarrier systems . . . . .	35
4.1.1	Introduction . . . . .	35
4.1.2	Multicarrier multipactor basics . . . . .	37
4.1.3	SEY model . . . . .	39
4.1.4	Accumulation model . . . . .	41
4.1.5	Numerical results . . . . .	47
4.1.5.1	Single carrier signal . . . . .	47
4.1.5.2	Pulsed signal . . . . .	48
4.1.5.3	Multicarrier signal . . . . .	50
4.1.6	Conclusions . . . . .	51
4.2	RF breakdown prediction for microwave passive components in multi-carrier operation . . . . .	53
4.2.1	Introduction . . . . .	53
4.2.2	Multipactor Basics . . . . .	53
4.2.3	Field Analysis of Microwave Devices . . . . .	54
4.2.4	Electron Motion and Space Charge Computation . . . . .	56
4.2.5	Results . . . . .	58
4.2.6	Conclusions . . . . .	60
4.3	Non-stationary Statistical Theory for Multipactor . . . . .	61
4.3.1	Introduction . . . . .	61
4.3.2	Limitations of the current theories . . . . .	62
4.3.3	Non-stationary Statistical Multipactor . . . . .	65
4.3.3.1	Equations of motion . . . . .	66
4.3.3.2	Definitions and conventions . . . . .	67
4.3.3.3	Statistical development . . . . .	68
4.3.3.4	Theoretical Analysis . . . . .	75
4.3.4	Numerical Simulations . . . . .	76
4.3.5	Results . . . . .	77
4.3.6	Conclusions . . . . .	81
4.4	Multipactor theory for multi-carrier signals . . . . .	83
4.4.1	Introduction . . . . .	83
4.4.2	Multi-carrier signal analysis . . . . .	85
4.4.3	Multipactor theory for multi-carrier signals . . . . .	91
4.4.3.1	Equations of motion . . . . .	91
4.4.3.2	Multipactor theory for multi-carrier signals . . . . .	93

4.4.4	Numerical Simulations . . . . .	100
4.4.5	Results . . . . .	101
4.4.5.1	Zero phases - uniform frequency spacing . .	101
4.4.5.2	Triangular phases - uniform frequency spacing	104
4.4.5.3	Arbitrary phases - non-uniform frequency spacing and different amplitudes . . . . .	106
4.4.6	Conclusions . . . . .	108
4.5	Prediction of Multipactor Breakdown for Multi-carrier Ap- plications: The Quasi-stationary Method . . . . .	109
4.5.1	Introduction . . . . .	109
4.5.2	Background . . . . .	112
4.5.2.1	Multipactor in multi-carrier signal . . . . .	112
4.5.2.2	The 20-gap-crossing rule . . . . .	114
4.5.2.3	Parallel-plate geometry . . . . .	115
4.5.3	Quasi-stationary model prediction . . . . .	116
4.5.3.1	Theory . . . . .	117
4.5.3.2	Procedure for threshold determination . . .	120
4.5.4	Testing . . . . .	123
4.5.4.1	Frequency plans and tests . . . . .	123
4.5.4.2	Sample Design . . . . .	123
4.5.4.3	Description of the test bed . . . . .	124
4.5.4.4	SEY measurements . . . . .	126
4.5.5	Simulation software . . . . .	127
4.5.6	Predictions and test results . . . . .	128
4.5.6.1	Error definition . . . . .	128
4.5.6.2	Phase configurations . . . . .	129
4.5.6.3	RF breakdown prediction and measurements	129
4.5.6.4	Analysis of results . . . . .	135
4.5.7	Conclusions . . . . .	135
<b>5</b>	<b>General Discussion</b>	<b>137</b>
5.1	Single-carrier theories . . . . .	137
5.1.1	Classical multipactor theory . . . . .	137
5.1.1.1	Constant- $k$ theory . . . . .	139
5.1.1.2	Constant- $v$ theory . . . . .	141
5.1.1.3	Hybrid modes . . . . .	143
5.1.1.4	Phase focusing . . . . .	144
5.1.2	Statistical Multipactor theories . . . . .	146
5.1.2.1	Stationary theory . . . . .	148
5.1.2.2	Non-stationary theory . . . . .	153
5.1.3	Single-carrier prediction . . . . .	154

5.2	Multi-carrier theories . . . . .	155
5.2.1	Peak power . . . . .	156
5.2.2	20-gap-crossing rule . . . . .	156
5.2.3	Non-stationary multi-carrier theory . . . . .	161
5.2.4	Quasi-stationary theory . . . . .	161
5.2.5	Multi-carrier prediction: Worst-case determination . . . . .	162
5.3	Discussion on experimental results . . . . .	168
<b>6</b>	<b>Conclusions and future work</b>	<b>173</b>
6.1	Conclusions . . . . .	173
6.2	Future work . . . . .	177
<b>A</b>	<b>Electron Seeding Techniques</b>	<b>179</b>
A.1	Radioactive sources . . . . .	180
A.2	UV lamps . . . . .	184
A.3	Regulated Electron Gun . . . . .	186
