Contents

1 Introduction **1**

1.1 Objectives 3

1.2 Main contributions 5

1.3 Outline 7

2 Context and background **9**

2.1 Introduction to tissue characterization 9

2.2 Characterization of the breast tissues 12

2.3 Characterization of the corneal tissue 15

2.4 Conclusions 18

3 Materials and methods **19**

3.1 Biomechanical modeling of soft tissue 20

3.1.1 Finite Element Method 21

3.1.2 Hyperelasticity 23

3.2 Optimization by genetic heuristics 26
3.2.1 Genetic operators 27
3.2.2 GA outline 28
3.3 Similarity coefficients 30
3.3.1 Overlap and distance coefficients 31
3.3.2 Analyzing the performance of the coefficients 34
3.3.3 Geometric Similarity Function 41
3.4 Conclusions 44

4 Characterization of the biomechanical behavior of the breast 45
4.1 Breast anatomy 46
4.2 Breast imaging systems 47
4.2.1 X-ray Mammography 49
4.2.2 Magnetic Resonance 50
4.3 Software breast phantoms 53
4.4 Study of the mesh quality 58
4.4.1 Materials and Methods 60
4.4.2 Simulation of the mammographic compression 64
4.4.3 Results of the mesh quality analysis 66
4.4.4 Discussion 72
4.5 Biomechanical modeling of the breast tissues 76
4.5.1 Hyperelastic anisotropic model of the breast 77
4.5.2 Estimation of the biomechanical properties . 79

4.5.3 Software phantom generation 80
4.5.4 Boundary conditions and contact 80
4.5.5 Search algorithm 81
4.5.6 Results 82
4.5.7 Discussion 86
4.6 Conclusions 92

5 Characterization of the biomechanical behavior of the cornea 95
5.1 Cornea anatomy 96
5.2 Biomechanical model of the cornea 97
5.3 Estimation of the biomechanical properties 99
5.4 Search algorithm 102
5.5 Results 104
5.6 Discussion 107
5.7 Conclusions 110

6 Conclusions 113
6.1 Summary of contributions 114
6.2 Future work 115
6.3 Final considerations 116

Bibliography 121
