

Table of contents

| | | |
|----------|--|-----------|
| 1 | Introduction | 1 |
| 1.1 | Combustion – Look back and outlook | 1 |
| 1.2 | Particular challenges of thermal engines | 4 |
| 1.3 | Motivation and objectives | 7 |
| 1.3.1 | Motivation | 7 |
| 1.3.2 | Objectives | 7 |
| 1.4 | Methodology and outline | 8 |
| 1.4.1 | Methodology | 8 |
| 1.4.2 | Outline of this work | 9 |
| | Bibliography | 10 |
| 2 | Bibliographic review | 11 |
| 2.1 | Introduction | 12 |
| 2.2 | Combustion regimes | 12 |
| 2.2.1 | Basic concepts | 12 |
| 2.2.2 | Premixed combustion | 14 |
| 2.2.3 | Nonpremixed combustion | 19 |
| 2.2.4 | Partially premixed combustion | 26 |
| 2.3 | CFD modeling of turbulent reactive flows | 27 |
| 2.3.1 | Basic equations of fluid flow | 27 |
| 2.3.2 | Treatment of turbulence | 30 |
| 2.3.3 | Chemical kinetics | 40 |

| | | |
|----------|---|-----------|
| 2.4 | Tools for combustion modeling | 42 |
| 2.4.1 | Treatment of chemistry | 42 |
| 2.4.1.1 | Chemical based reduction | 43 |
| 2.4.1.2 | Manifold generation and tabulated chemistry | 43 |
| 2.4.2 | Chemistry-turbulence interaction | 45 |
| 2.4.2.1 | Conditional moment closure | 46 |
| 2.4.2.2 | Transported probability density functions ... | 46 |
| 2.4.2.3 | Presumed probability density functions | 47 |
| | Bibliography | 47 |
| 3 | Combustion model description and aspects of laminar flamelets | 55 |
| 3.1 | Introduction | 56 |
| 3.1.1 | Characteristics of the present combustion problem ... | 57 |
| 3.1.2 | Model fundamentals | 58 |
| 3.2 | Laminar diffusion flames | 59 |
| 3.2.1 | Geometrical configuration and parametrization of flamelet space | 59 |
| 3.2.2 | Calculation of 1D diffusion flames | 61 |
| 3.2.3 | Characteristics of 1D diffusion flames | 63 |
| 3.3 | Approximated laminar diffusion flames | 69 |
| 3.3.1 | Need for approximated DF | 69 |
| 3.3.2 | Calculation of approximated diffusion flames | 69 |
| 3.3.3 | Characteristics of approximated diffusion flames | 73 |
| 3.3.4 | Considerations on the computational effort | 77 |
| 3.4 | Presumed PDF modeling | 78 |
| 3.4.1 | Outline on the presumed PDF modeling | 78 |
| 3.4.2 | Reparametrization of unsteady flamelet solutions | 79 |
| 3.4.3 | Detailed description of presumed PDF modeling | 81 |
| 3.5 | Coupling with the CFD code | 88 |
| 3.5.1 | Implementation of model equations in OpenFOAM ... | 88 |

| | | |
|----------|---|------------|
| 3.5.2 | Coupling with direct lookup of thermo-chemical properties | 91 |
| 3.5.3 | Coupling by tabulation of species mass fractions | 94 |
| 3.6 | Final remarks | 97 |
| | Bibliography | 98 |
| 4 | Lifted turbulent H₂/N₂ jet flame | 101 |
| 4.1 | Introduction | 101 |
| 4.1.1 | Motivation | 102 |
| 4.1.2 | Objectives of the study | 102 |
| 4.1.3 | Methodology of the study and outline | 103 |
| 4.2 | Case setup and boundary conditions | 104 |
| 4.3 | Results of the conventional combustion model | 107 |
| 4.3.1 | Basic flame structure | 107 |
| 4.3.2 | Influence of model parameters | 111 |
| 4.3.3 | Sensitivity of lift-off height | 118 |
| 4.4 | Results of the conventional and the simplified combustion model | 120 |
| 4.4.1 | Sensitivity of lift-off height | 120 |
| 4.4.2 | Comparison of species predictions | 121 |
| 4.4.3 | Comparison of radial profiles | 123 |
| 4.5 | First conclusions about the implemented model | 125 |
| | Bibliography | 126 |
| 5 | Reactive diesel-like sprays | 129 |
| 5.1 | Introduction | 129 |
| 5.1.1 | Motivation | 130 |
| 5.1.2 | Objectives of the study | 130 |
| 5.1.3 | Methodology of the study | 131 |
| 5.2 | Case setup and boundary conditions | 133 |
| 5.3 | Results | 135 |
| 5.3.1 | Distribution of the inert spray | 135 |

| | | |
|----------|--|------------|
| 5.3.2 | Transient igniting flame structure | 139 |
| 5.3.3 | Steady flame structure..... | 145 |
| 5.4 | Conclusions..... | 156 |
| | Bibliography | 158 |
| 6 | General conclusions and future work | 163 |
| 6.1 | General conclusions..... | 163 |
| 6.2 | Future work | 166 |
| | Bibliography | 169 |
