

**PHOTOCATALYSTS BASED ON TITANIA OR IRON SEMICONDUCTORS
FOR THE GENERATION OF HYDROGEN FROM WATER UPON SOLAR IRRADIATION**

Table of Contents

1	Introduction.....	1
1.1	Introduction.....	3
1.2	Hydrogen as energy vector.....	7
1.3	Photocatalysts for hydrogen generation.....	9
1.4	Modified TiO ₂	13
1.5	Au NPs supported on TiO ₂ as visible light photocatalyst for hydrogen generation.....	15
1.6	Heterojunction photocatalysts.....	18
1.7	Framework phosphate as photocatalysts.....	21
1.8	References.....	24
2	Objectives.....	27
2.1	Objectives.....	29
3	Influence of the irradiation wavelength on the photocatalytic activity Au-Pt nanoalloy supported on TiO ₂ for hydrogen generation from water.....	31
3.1	Introduction.....	33
3.2	Results and discussion.....	34
3.2.1	Sample preparation and characterization.....	34
3.2.2	Photocatalytic activity for the H ₂ generation under visible light irradiation.....	39
3.2.3	Photocatalytic activity of Au-Pt/TiO ₂ under UV light or simulated sunlight.....	44
3.2.4	Role of Pt in Au-Pt/TiO ₂	47
3.3	Conclusions.....	47
3.4	References.....	48

4	Photocatalytic hydrogen generation from water methanol mixutres using “black” anatase obtained by annealing of titanate nanotubes	51
4.1	Introduction	53
4.2	Results and discussion	54
4.2.1	Hydrogen production	60
4.3	Conclusions	64
4.4	References	65
5	Synergy of the combination of titanate nanotubes with titania nanoparticles for the photocatalytic hydrogen generation from water methanol mixture using simulated sunlight	67
5.1	Introduction	69
5.2	Results and discussion	70
5.3	Conclusions	79
5.4	References	80
6	Visible light photocatalytic activity for hydrogen production from water methanol mixtures of open-framework V-doped mixed valence titanium phosphate	83
6.1	Introduction	85
6.2	Results and discussion	86
6.2.1	Photocatalytic hydrogen generation	95
6.2.2	Characterization of (Ti ³⁺ /Ti ⁴⁺)P as photocatalyst	101
6.3	Conclusions	107
6.4	References	108

7	Doped framework iron phosphate as novel photocatalyst for hydrogen production from water methanol mixtures	111
7.1	Introduction.....	113
7.2	Results and discussion.....	115
7.3	Conclusions	129
7.4	References.....	130
8	Materials and method.....	133
8.1	Emission spectra of solar simulator.....	135
8.2	Emission spectra of visible light LED.....	135
8.3	Influence of the irradiation wavelength on the photocatalytic activity of Au-Pt nanoalloys supported on TiO ₂ for hydrogen generation from water.....	136
8.3.1	Samples preparation.....	136
8.3.2	Samples characterization.....	136
8.3.3	Photocatalytic tests for hydrogen production.....	136
8.4	Photocatalytic hydrogen generation form water-methanol mixtures using “black” anatase obtained by annealing of titanate nanotubes.....	137
8.4.1	Samples preparation.....	137
8.4.2	Photocatalytic tests for hydrogen production.....	137
8.5	Synergy of the combination of titanate nanotubes with titania nanoparticles for the photocatalytic hydrogen generation from water methanol mixtures using simulated sunlight.....	138
8.5.1	Samples preparation.....	138
8.5.2	Photocatalytic tests for hydrogen production.....	139
8.6	Visible light photocatalytic activity for hydrogen production from water-methanol mixtures of open-framework V-doped mixed-valence titanium phosphate.....	139
8.6.1	Material Preparation.....	139
8.6.2	Photocatalytic tests for hydrogen production.....	140
8.6.3	Photocurrent measurements and determination of flat band potential of the conduction band.....	140
8.6.4	Transient absorption spectroscopy.....	141

8.7 Doped framework iron phosphate as novel photocatalyst for hydrogen production	
from water methanol mixtures	144
8.7.1 Material Preparation.....	144
8.7.2 Photocatalytic tests for hydrogen production	144
8.7.3 Photocurrent measurements and determination of flat band potential of the conduction band	144
8.7.4 Transient absorption spectroscopy.....	145
8.8 References.....	146
9 Conclusions.....	147
9.1 Conclusions.....	149
10 Appendix.....	151
10.1 Abstract.....	153
10.2 Publications.....	156
