Contents

List of Abbreviations **xv**

1 Introduction **1**
1.1 The Evolution towards Next-Generation Terrestrial Broadcasting 1
1.2 Problem Formulation 5
1.3 Objectives and Thesis Scope 6
1.4 Thesis Outline and Main Contributions 8
1.5 List of Publications 12

2 Multi-RF Technologies in the Next-Generation DTT Systems **15**
2.1 Introduction 15
2.2 An overview to data transmission in current DTT systems . . . 17
2.3 Time Frequency Slicing (TFS) 20
2.3.1 Concept 20
2.3.2 Background 23
2.4 Channel Bonding (CB) 24
2.4.1 Concept 24
2.4.2 Background 25
2.5 Network gains with Multi-RF Channel Aggregation 26
2.5.1 Inter-RF FI and Advanced Network Planning (ANP) . . 30
2.6 Conclusions 30

3 Network advantages by multiple RF channel aggregation **33**
3.1 Introduction 33
3.2 Performance Evaluation of Inter-RF Frequency Interleaving . . 34
3.2.1 An Information-Theoretic Approach to Inter-RF Frequency Interleaving 34
3.2.2 Performance analysis based on physical layer simulations 40

3.3 Characterization and Modelling of the Coverage Gain in the VHF and UHF bands . . . 42
3.3.1 Analysis of the frequency-dependent characteristics of propagation based on models . . . 44
3.3.2 Link budget and coverage definition implications . . . 51
3.3.3 Analysis and modelling of the coverage gain based on outdoor field measurements . . . 54
3.3.4 Analysis of the coverage gain based on indoor field measurements . . . 62
3.4 Interference robustness gain . . . 64
3.5 Capacity gain by Multi-RF Channel Aggregation . . . 66
3.5.1 Statistical Multiplexing . . . 66
3.5.2 Bit-Rate increase with CB . . . 69
3.6 Conclusions . . . 71

4 Advanced Network Planning (ANP) with Inter-RF Frequency Interleaving 75
4.1 Introduction . . . 75
4.2 Conventional Network Planning . . . 76
4.2.1 Pure Multiple Frequency Network (MFN) planning . . . 79
4.2.2 Single Frequency Network (SFN) planning . . . 81
4.3 Advanced Network Planning (ANP) Strategies for increased NSE 86
4.3.1 Mixed Polarization Network (MPN) . . . 86
4.4 Methodology Considerations . . . 90
4.4.1 Network configuration and NSE calculation . . . 90
4.4.2 Limitations of the methodology . . . 93
4.5 NSE Evaluation for Traditional and ANP . . . 94
4.5.1 Pure Multiple Frequency Networks . . . 94
4.5.2 MFNs of SFN Clusters and Large area SFNs . . . 96
4.6 Application of the results to current and next-generation DTT networks . . . 99
4.6.1 Applicability to portable and mobile reception . . . 100
4.6.2 Dependency with the number of RF channels . . . 101
4.7 Conclusions . . . 102

5 Implementation Aspects of TFS and CB 103
5.1 Introduction . . . 103
5.2 Transmitter implementation with TFS . . . 104
5.2.1 FEC and Interleaving . . . 105
5.2.2 Frame composition and transmission modes . . . 110
5.2.3 Scheduling operations . . . 111

5.3 Receiver operation for TFS reception . . . 115
5.3.1 PLL+AGC and synchronization operation . . . 116
5.3.2 Channel Estimation . . . 118
5.3.3 Operation limitations with single-tuner TFS . . . 120
5.3.4 Dual tuner approach for TFS operation . . . 122
5.4 Transmitter and receiver implementation with CB . . . 124
5.5 Signalling requirements for TFS and CB . . . 124
5.6 Impacts of TFS and CB on Network Topology and Deployment 128
5.6.1 Network Topology . . . 128
5.6.2 Coverage Issues . . . 130
5.6.3 Network Deployment with ANP . . . 131
5.6.4 Legislation and Regulatory Aspects . . . 132
5.7 Conclusions . . . 132

6 Conclusions and Future Work 135
6.1 Concluding Remarks . . . 135
6.1.1 Increased frequency diversity . . . 137
6.1.2 Capacity gains . . . 138
6.1.3 Robustness against interferences and Advanced Network Planning (ANP) . . . 139
6.1.4 Implementation Aspects . . . 140
6.1.5 Network Deployment Recommendations . . . 141
6.2 Future Research Topics . . . 141
6.2.1 MIMO with TFS or CB . . . 141
6.2.2 Layer Division Multiplexing with TFS or CB . . . 142
6.2.3 TFS in connection with LPLT network topologies . . . 142

A Measurement campaigns details 143
A.1 Outdoor Measurements . . . 143
A.2 Indoor Measurements . . . 144

B Physical Layer and Network Planning Simulations 149
B.1 Physical Layer OFDM-based Simulators . . . 149
B.2 Network Planning Simulations . . . 153

C Propagation Models 157
C.1 ITU-R P.525 Recommendation . . . 157
C.2 ITU-R P.529 Recommendation . . . 157
C.3 ITU-R P.1546 Recommendation . . . 159
C.4 Other Models and Recommendations . . . 159
