

I.	INTRODUCTION.....	1
1.	Phase change materials.....	1
1.1.	Classification of PCM's. Advantages and disadvantages.....	3
1.2.	Encapsulation of PCM's.....	8
1.3.	Use of the electro-hydrodynamic process for microencapsulation of PCM's.....	11
	References.....	16
II.	OBJECTIVES.....	19
1.	General and specific objectives.....	19
III.	RESULTS AND DISCUSSION.....	21
1.	General introduction to results.....	21
	CHAPTER I. Electrospun Heat Management Polymeric Materials of Interest in Food Refrigeration and Packaging.....	26
	CHAPTER II. Use of phase change materials to develop electrospun coatings of interest in food packaging applications.....	55
	CHAPTER III. Development of Polystyrene-based films with Temperature Buffering Capacity for Smart Food Packaging.....	81
	CHAPTER IV. Optimization of solution composition for the encapsulation of a phase change material in polymeric matrices by electro-hydrodynamic processing.....	111
	CHAPTER V. Development of temperature buffering encapsulated phase change material in polyvinyl alcohol (PVOH) and polycaprolactone (PCL) via emulsion and coaxial electrospinning of interest in the food cold chain.....	144
IV.	GENERAL DISCUSSION.....	169

V.	CONCLUSIONS.....	177
VI.	ANEXES.....	179
	Annex 1. List of publications.....	179
