Contents

Introduction 1

0 Preliminaries 5

0.1 General framework and notation 5

0.1.1 Reminder of spectral theory 5

0.1.2 Functional spaces 6

0.1.3 Vector valued holomorphic functions 8

0.2 Strongly continuous semigroups 8

0.3 Topological dynamics and strongly continuous semigroups 10

0.4 Semiflows 14

0.5 Some auxiliary results. 17

1 Chaos for semiflow semigroups in Lebesgue spaces 21

1.1 State of the art 22

1.2 Chaotic dynamics on Lebesgue spaces 24

1.3 Chaotic dynamics on Sobolev spaces 39

1.4 The Lasota equation 49

1.4.1 von Foerster-Lasota equation. 49

1.4.2 Generalization of von Foerster-Lasota equation. 53

2 Stable semiflow semigroups in Lebesgue spaces 59

2.1 State of the art 60

2.2 Multidimensional case on Lebesgue spaces. 61

2.3 One-dimensional case on Lebesgue spaces 63

2.4 Stability on Sobolev spaces. 70

2.5 The Lasota equation 72

2.5.1 von Foerster-Lasota equation 72

2.5.2 Generalized von Foerster-Lasota equation. 74

3 Chaotic behaviour of birth-and-death models 77

3.1 State of the art 78

3.1.1 Death model with variable coefficients 78

3.1.2 Birth-and-death model with constant coefficients 79

3.1.3 Birth-and-death model with variable coefficients 80

3.2 Birth-and-death models with variable coefficients: general approach 81

Bibliography 91
