Chapter 2. Encounters with the Moral Economy of Water: Convergent Evolution in Valencia

2.1 Introduction ........................................................................... 57
2.2 Infrastructure and social organization in the Huerta, a multi-community system of medium scale .................................................. 59
2.3 Methods used in the fieldwork ............................................... 64
2.4 Results: the distribution and use of seasonal low water ............ 68
2.5 Results: the distribution and use of water during droughts ........ 77
2.6 Discussion: the hypothesis of convergent evolution ............... 83
2.7 Conclusion ........................................................................... 90

Chapter 3. The Integrated Use of Surface, Ground and Recycled Wastewater in Adapting to Drought in the Traditional Irrigation System of Valencia

3.1 Introduction ........................................................................... 97
3.2 Method ................................................................................ 100
3.3 La Vega de Valencia and its irrigation system ......................... 101
   3.3.1 Historical context and evolution ....................................... 101
   3.3.2 The irrigation operating principles in Valencia using surface water from the Turia River .................................................. 102
   3.3.3 The importance of infrastructure to maintain uniformity and proportionality ............................................................... 104
   3.3.4 Supplementary resources for WUAs ................................. 105
      3.3.4.1 Provision of the WUAs’ with Drought Emergency Wells .... 105
   3.3.4.2 Recycled Wastewater .................................................. 105
      3.3.4.2.1 Autonomy .................................................. 106
      3.3.4.2.2 Contiguity, Transparency and Proportionality ........... 106
      3.3.4.2.3 Uniformity .................................................. 107
   3.3.4.3 Overall perception of the supplementary resources .......... 107
3.4 Groundwater User Associations. Understanding the overlapping of Water User Associations .................................................. 108
3.4.1 The operating principles in Valencia in Groundwater User Associations 109

3.4.1.1 Autonomy ................................................. 110
3.4.1.2 Contiguity ................................................. 110
3.4.1.3 Proportionality and Uniformity .......................... 110
3.4.1.4 Transparency ............................................. 113

3.4.2 Overall perception of GUA management .......................... 114

3.5 Adapting to Drought: Integrated Management of Surface, Ground and Recycled Water. Special measures in severe drought emergencies .......... 115

3.6 Conclusion .................................................. 117

Chapter 4. Institutional and Management Introduction in Collectively Managed Irrigation Systems in Valencia 119

4.1 Introduction ................................................. 119
4.2 Method ..................................................... 122
  4.2.1 Case study description ...................................... 124
    4.2.1.1 Acequia Real del Júcar ................................ 124
    4.2.1.2 General Community of Users of the Júcar-Túria Channel ...... 125
    4.2.1.3 General Community of Irrigators of Vall d’Uixó ................ 126
4.3 Reasons for adopting drip irrigation .................................. 126
  4.3.1 Reasons for adopting drip irrigation, by Water User Associations .... 126
  4.3.2 Reasons for adopting drip irrigation, by farmers .................... 129
  4.3.3 WUAs measures to stimulate drip irrigation uptake among farmers ... 131
4.4 Management changes and adaptation to drip irrigation technologies ....... 132
  4.4.1 Changes in the organization: centralization in water management .... 132
  4.4.2 Changes in irrigation and fertigation management .................... 134
    4.4.2.1 Irrigation management .................................... 134
    4.4.2.2 Duplicity of irrigation systems ............................ 136
    4.4.2.3 Fertigation management ................................... 137
    4.4.2.4 Changes in irrigation rules ................................. 138
  4.4.3 Changes in the structure of the staff and training for farmers .......... 138
4.5 The perceptions of farmers and their satisfaction with drip irrigation ....... 139
4.6 Conclusion .................................................. 140
Chapter 5. General Discussion of Results ............................................. 141
5.1 Trawick’s theoretical model and the integration of different water resources . . . . . 142
5.2 Changes occurred with drip irrigation technologies ........................................ 146
5.3 Adoption and adaptation of new resources and technologies ............................. 148
  5.3.1 Irrigation management and governance in the traditional Water User
     Associations of the Huerta of Valencia and the Acequia Real del Júcar .......................... 149
  5.3.2 Comparison of changes related to the adoption of new technologies
     and water resources ..................................................................................... 150
  5.3.3 Other considerations regarding drip irrigation policy ................................. 153
5.4 Long-term sustainability of traditional systems ............................................. 155

Chapter 6. Conclusions ............................................................................. 159

List of Figures ............................................................................................... 165
List of Tables ................................................................................................. 167
References ..................................................................................................... 169
