

Content

GENERAL OBJECTIVES AND ORGANIZATION OF THE THESIS ...	I
ABBREVIATIONS	III
CHAPTER 1. INTRODUCTION	
1.1. Supramolecular chemistry.....	1
1.2. Molecular recognition processes for sensing applications.....	4
1.2.1. From receptors to molecular sensors.	4
1.2.2. Optical molecular sensors	7
1.2.2.1. Binding site-signaling subunit approach	7
1.2.2.2. Displacement approach.	8
1.2.2.3. Chemodosimeter approach.	9
1.3. Hybrid materials for molecular recognition process ..	10
1.4. Hybrid organic-inorganic porous materials.	16
1.4.1. Porous materials.	18
1.4.1.1. Synthesis of mesoporous materials. ...	19
1.4.1.2. Synthesis of microporous crystalline materials.	30
1.4.2. Covalent functionalization of microporous and mesoporous materials.	37
1.4.2.1. Organic functionalization of the inorganic matrix by the Grafting methods.	40
1.4.2.2. Organic functionalization of the inorganic matrix by co-condensation methods.	44
1.4.2.3. Periodic mesoporous organosilicas	51
1.5. Applications of organic-inorganic siliceous hybrid materials for sensing.	52
1.5.1. Binding pockets.	53
1.5.2. Molecular gates.	59
1.6. Conclusions.	66

CHAPTER 2. WORK PLAN	69
CHAPTER 3. TECHNIQUES OF CHARACTERIZATION	
3.1. Thermogravimetric analysis	71
3.2. Elemental analysis	73
3.3. Infrared spectroscopy	73
3.4. Surface area analysis	74
3.5. Powder X-ray diffraction	77
3.6. Electron microscopy	79
3.7. Ultraviolet-visible spectroscopy	81
CHAPTER 4. HYBRID ORGANIC-INORGANIC POROUS MATERIALS USED FOR OPTICAL SENSING USING THE CHEMOSIMETER APPROACH.	
4.1. Objectives.	83
4.2. <i>Chromogenic discrimination of primary aliphatic amines in water with functionalized mesoporous silica.....</i>	85
4.3. <i>Sensory hybrid host materials for the selective chromo- fluorogenic detection of biogenic amines.</i>	109
4.4. <i>Hybrid functionalized mesoporous silica-polymer composites for enhanced analyte monitoring using optical sensors.</i>	123
4.5. <i>Anchoring dyes into multidimensional large-pore zeolites: A prospective use as chromogenic sensing materials</i>	151
CHAPTER 5. BIOMIMETIC "BINDING POCKETS" IN HYBRID ORGANIC- INORGANIC MATERIALS FOR DISPLACEMENT ASSAYS.	
5.1. Objectives.	181
5.2. <i>Hybrid materials with nanoscopic anion binding pockets for the colorimetric sensing of phosphate in water using displacement assays.</i>	183
5.3. <i>Mesoporous hybrid materials containing nanoscopic binding pockets for colorimetric anion signaling in water by using displacement assays.</i>	201
CHAPTER 6. CONCLUSIONS	237
