INDEX

INTRODUCTION 1

GENERAL OBJECTIVES 39

CHAPTER 1 43
Effect of maturity stage at processing and antioxidant treatments on the physico-chemical, sensory and nutritional quality of fresh-cut ‘Rojo Brillante’ persimmon.

CHAPTER 2 73
Physico-chemical, sensory and nutritional quality of fresh-cut ‘Rojo Brillante’ persimmon affected by maturity stage and antibrowning agents
Accepted in Food Science and Technology International.

CHAPTER 3 101
Effect of postharvest 1-MCP treatment on shelf life of fresh-cut persimmons cv. Rojo Brillante dipped in antioxidants

CHAPTER 4 113
Effect of controlled atmosphere storage and antioxidant dips on the physico-chemical, visual and nutritional quality of minimally processed ‘Rojo Brillante’ persimmons
Submitted to Food Science and Technology International.
CHAPTER 5 141

Quality changes in fresh-cut ‘Rojo Brillante’ persimmons packed in modified atmosphere and dipped in antibrowning agents

Submitted to *Food Science and Technology International. Research note.*

CHAPTER 6 155

Antioxidant edible coatings help to maintain the physical, sensory and nutritional quality of fresh-cut ‘Rojo Brillante’ persimmon

CHAPTER 7 183

Browning inhibition and microbial control in fresh-cut persimmon (*Diospyros kaki* Thunb. cv. Rojo Brillante) by apple pectin-based edible coatings

CHAPTER 8 211

Integration of antimicrobial pectin-based edible coating and active modified atmosphere packaging to preserve the quality and microbial safety of fresh-cut persimmon (*Diospyros kaki* Thunb. Cv. Rojo Brillante)

Submitted to *Journal of Food Science and Technology*

GENERAL DISCUSSION 239

CONCLUSIONS 26
