

Content

1. General introduction.....	1
1.1 Nanotechnology.....	3
1.2 Organic-Inorganic Hibrid Nanomaterials for Advanced Applications	4
1.2.1 Mesoporous silica materials as inorganic scaffolds.....	5
1.2.2 Synthesis of inorganic mesoporous materials.....	8
1.2.3 Functionalization of MCM-41 scaffolds.....	12
1.2.4 Characterization of mesoporous materials	16
1.2.5 Functional organic-inorganic mesoporous hybrid materials: Stimuli-responsive systems.....	19
1.3 Gated nanoparticles as drug delivery systems (DDS)	25
1.3.1 Loading, transport and release of active molecules.....	27
1.3.2 Targeting and cellular uptake	46
1.3.3 Biocompatibility.....	49
2. Glucose-Triggered Release Using Enzyme-Gated Mesoporous Silica Nanoparticles	53
2.1 Introduction	55
2.2 Objectives	56
2.3 Synthesis and Characterization.....	57
2.3.1 Design of the system	57
2.3.2 Synthesis of the materials	58
2.3.3 Characterization	59
2.4 Results and discussion	64
2.4.1 Delivery studies	64
2.4.1 Delivery studies as a function of the glucose concentration.....	66
2.4.1 Selectivity studies	67
2.5 Conclusions	67
2.6 Experimental Section	68
2.6.1 Chemicals.....	68
2.6.2 General Characterization Techniques	68
2.6.3 Synthesis of the materials	69
2.6.4 Release experiments	70
2.6.5 Gluconic acid detection	70

3. Gated mesoporous silica nanoparticles for the controlled delivery of drugs in cancer cells.....	73
3.1 Introduction	75
3.2 Objectives	78
3.3 Synthesis and Characterization.....	79
3.3.1 Design of the system	79
3.3.2 Synthesis of the materials	80
3.3.3 Characterization	81
3.4 Results and discussion	86
3.4.1 Delivery studies S1	86
3.4.2 Delivery studies S1 as a function of GSH concentration.....	87
3.4.3 Delivery studies S2	88
3.4.4 Delivery studies S3	88
3.4.5 In vitro studies of the capped materials in cancer cells.	89
3.5 Conclusions	93
3.6 Experimental Section	93
3.6.1 Chemicals.....	93
3.6.2 General Techniques.....	94
3.6.3 Synthesis of the materials	95
3.6.4 Dye release studies.....	96
3.6.5 Cell culture conditions.....	97
3.6.6 WST-1 cell viability assay.....	97
3.6.7 Live confocal microscopy S1 and S3 cellular internalization assays	97
4. Gated mesoporous silica nanoparticles for the controlled delivery of drugs in senescent cells.....	99
4.1 Introduction	101
4.2 Objectives	104
4.3 Synthesis and Characterization.....	105
4.3.1 Design of the system	105
4.3.2 Synthesis of the materials	106
4.3.3 Characterization	107
4.4 Results and discussion	113
4.4.1 Delivery studies	113
4.4.2 Delivery studies of the capped materials in ITM cells.	115
4.4.3 In vivo studies of the capped materials in IPF murine model	119
4.5 Conclusions	126

4.6	Experimental Section	126
4.6.1	Chemicals.....	126
4.6.2	General characterization techniques	127
4.6.3	Synthesis of the materials	128
4.6.4	Delivery studies	129
4.6.5	Cellular studies	130
4.6.6	In vivo studies.....	132
5.	Advanced communication processes between nanodevices through the interchange of chemical messengers	135
5.1	Introduction	137
5.2	Objectives	139
5.3	Synthesis and Characterization.....	140
5.3.1	Design of the system	140
5.3.2	Synthesis of the materials	142
5.3.3	Characterization	144
5.4	Results and discussion	148
5.4.1	Delivery studies of the single ensembles	148
5.4.2	Chemical communication studies between S1 and S2 _{dye}	154
5.4.3	Chemical communication studies between S1, S2 and S3.....	155
5.4.4	Communication studies with S1 _{blank} and S2 _{blank}	156
5.5	Conclusions	158
5.6	Experimental Section	159
5.6.1	Chemicals.....	159
5.6.2	General techniques	160
5.6.3	Synthesis of the materials	160
5.6.4	Delivery studies	164
6.	Conclusions.....	168
