

Table of contents

Acronyms	vii
Notation	xv
1 Introduction	1
1.1 Background	2
1.1.1 Historical background: from 3G to 5G	2
1.1.2 LTE standard	7
1.1.3 LTE-Advanced standard	10
1.2 State of the art analysis	10
1.2.1 Performance evaluation and system modelling	11
1.2.2 Radio Resource Management	16
1.2.3 Cooperation/coordination in wireless networks	17
1.3 Problem and Thesis scope	24
1.3.1 Problem definition and hypothesis	24
1.3.2 Thesis objectives	25
1.4 Thesis outline	26
1.5 Publications	27
2 LTE Description	31
2.1 Network architecture	32
2.2 Radio protocol architecture	33
2.3 PHY layer	36
2.3.1 Fundamentals and selected configuration	36
2.3.2 Reference signals	40
2.3.3 PDSCH processing at the eNodeB PHY	41
2.3.4 PDSCH processing at the UE PHY	43
2.3.5 MIMO processing	44
2.4 MAC and RRM	48

TABLE OF CONTENTS

2.4.1	HARQ	48
2.4.2	Link Adaptation	49
2.4.3	Scheduling	51
2.4.4	General view	52
2.5	Additional features	52
2.5.1	Additional LTE features	53
2.5.2	Additional LTE-Advanced features	54
2.6	Conclusions	55
3	Methodology and System Modelling	57
3.1	Fundamentals of evaluation methodology	58
3.1.1	Evaluation objectives	58
3.1.2	Evaluation methods	58
3.1.3	Link and system level simulation	59
3.1.4	Evaluation scenarios	60
3.1.5	Link level simulation procedure	61
3.1.6	System level simulation procedure	62
3.1.7	Simulation validity	63
3.1.8	Evaluation criteria	63
3.2	Technology independent system level models and assumptions	65
3.2.1	Network layout	66
3.2.2	User distribution	67
3.2.3	Channel modelling	67
3.2.4	Interference modelling	68
3.2.5	Wrap around	69
3.2.6	Traffic models	69
3.3	Technology dependent system level models and assumptions	70
3.3.1	Receiver modelling	70
3.3.2	Link abstraction models	74
3.3.3	Decoder model	76
3.3.4	HARQ	76
3.3.5	Link adaptation	77
3.3.6	Cell selection	78
3.3.7	Transport block sizes modelling	78
3.3.8	Control channels overhead modelling	79
3.4	Contributions of the Thesis to the system modelling of LTE	80
3.4.1	Link level abstraction	80
3.4.2	Channel estimation error modelling	81
3.4.3	Interference modelling	82
3.4.4	Shadowing correlation implementation	83
3.5	Conclusions	84

TABLE OF CONTENTS

4	LTE Link Adaptation Analysis	85
4.1	Introduction	86
4.2	LA specification support	88
4.2.1	CSI definitions	88
4.2.2	CSI reporting modes	90
4.2.3	CSI reporting testing	91
4.3	CSI calculation	93
4.3.1	PMI and RI calculation	93
4.3.2	Interference knowledge	94
4.3.3	Averaging and interference issues	95
4.4	CSI use in the eNodeB	95
4.5	Conclusions	101
5	LTE Scheduling Analysis	103
5.1	Introduction	104
5.2	Proportional fair scheduling	105
5.2.1	Mathematical model of scheduling	105
5.2.2	Proportional fairness	106
5.3	The D-PFS algorithm	109
5.4	D-PFS modifications for increased proportional fairness	114
5.4.1	Decoupled and MCS constraint Aware PFS	114
5.4.2	Coupled and MCS constraint Aware PFS	115
5.4.3	Assessment methodology	116
5.4.4	Results	118
5.5	D-PFS modification for interference stabilization	119
5.5.1	Assessment methodology	122
5.5.2	Results	123
5.6	Scheduling in MU-MIMO	126
5.7	Conclusions	128
6	Analysis of a CS/CB CoMP scheme for LTE-Advanced	131
6.1	CoMP in the 3GPP	132
6.2	Channel covariance based CS/CB CoMP	135
6.2.1	CSI knowledge	136
6.2.2	Iterative process	137
6.3	Conclusions	139
7	LTE/LTE-Advanced Baseline Performance Evaluation	141
7.1	System configuration	142
7.2	System level evaluation	144
7.2.1	Geometry factors	144

TABLE OF CONTENTS

7.2.2	LTE Release 8 evaluation	145
7.2.3	LTE Release 10 without CoMP	148
7.2.4	LTE Release 10 with CoMP	154
7.3	Conclusions	156
8	5G Performance Evaluation	159
8.1	METIS objectives and test cases	159
8.2	METIS simulation methodology	161
8.3	Performance evaluation in a virtual reality office	162
8.3.1	Description of the test case	162
8.3.2	Main KPIs and requirements	163
8.3.3	Simulation models	163
8.3.4	Assumptions	164
8.3.5	Technology components added to LTE-Advanced to reach the required KPI	167
8.3.6	Results	168
8.4	Performance evaluation in a stadium	173
8.4.1	Description of the test case	173
8.4.2	Main KPIs and requirements	173
8.4.3	Simulation models	174
8.4.4	Assumptions	176
8.4.5	Technology components	177
8.4.6	Results	178
8.5	Conclusions	182
9	Conclusions and Future Research	183
9.1	Concluding remarks	183
9.2	Discussion on the future of the 5G	185
9.3	Future research topics	188
	Appendices	191
A	Description of the System Level Simulator	191
A.1	Introduction	191
A.2	Simulation platform functional description	192
A.2.1	Network layout	192
A.2.2	Channel	192
A.2.3	Link to System Mapping	194
A.2.4	Base Station and Mobile Terminal	194
A.2.5	Traffic source	197
A.3	Simulation platform calibration	197
A.3.1	Channel model calibration	198

TABLE OF CONTENTS

A.3.2	Baseline configuration calibration	199
B	Statistical Significance Assessment	205
References		207
