Sound Scattering by Lattices of Heated Wires.

Por Mitko Ivanov Angelov

Dirigida por

Francisco Cervera Moreno

y

José Sánchez-Dehesa Moreno-Cid

Contents

Outline of the PhD manuscript and Methodological strategy.....	1
I Focusing Effect of Two Hot Wires.....	3
1. Introduction.....	5
1.1. Temperature gradient as a natural phenomenon.....	5
1.2. Some applications of multilayer scatterer.....	6
1.3. Objectives.....	6
2. Acoustics	7
2.1. Acoustic wave equation.....	7
2.2. Ultrasound in real and ideal gases.....	8
2.3. Reflection and transmission of acoustic waves.....	9
2.4. Transmission through a fluid layer: normal incidence.....	10
2.5. Bragg condition.....	11
3. Fundamentals of the heat transfer theory.....	13
3.1. The heat equation.....	13
3.2. Boundary Conditions.....	14
4. Focusing of ultrasonic waves by an array of hot wires.....	17
5. Experimental confirmation of the focusing effect produced by heated wires.....	23
5.1. Temperature measurements.....	23
5.2. Basic formulas verification.....	26
5.3. Temperature and pressure measurements near the heated wire.....	29
5.3.1. Temperature measurements.....	29
5.3.2. Ultrasonic measurements.....	32
5.4. Comparison between theory and experiments	40
5.5. Conclusions.....	43
II Sonic Crystals Made of Heated Wires.....	45
6. Introduction to Sonic Crystals.....	47
6.1. Introduction.....	47
6.2. Objectives.....	48
7. Brief theoretical introduction.....	49
7.1. Fiber Bragg grating.....	49
7.2. Standing wave and acoustic interferometers.....	51
8. Two-dimensional model of sonic crystal. Numerical simulations.....	53
8.1. Crystal definition.....	53
8.2. Temperature field inside the sonic crystal.....	58
8.3. Acoustic pressure simulations.....	64
8.4. Acoustic analogue of Fiber Bragg grating.....	66

8.5. Reflection coefficients as a function of the temperature.....	68
9. Experimental study of the properties of SC made of heated wires.....	71
9.1. Experimental setup.....	71
9.2. Acoustic measurements.....	73
9.3 Conclusions.....	77
III Gradient-Index Sonic Crystals.....	79
10. Gradient-Index Sonic Crystals - introduction and objectives.....	81
10.1. Introduction and objectives.....	81
10.2. Brief theory of GRIN Sonic Crystals.....	82
11. Modelling of GRIN Sonic Crystals.....	85
11.1. GRIN lens design.....	87
11.2. Acoustic pressure simulations.....	91
12.3. Conclusions.....	93
Concluding remarks.....	95
Appendices.....	101
A Acoustic Wave Equations Derivation.....	103
B Theory of Multilayered Scatterer.....	109
C Heat Transfer Equations.....	117
D The Finite Element Method.....	131
E Publications.....	157
Bibliography.....	159
