

Ulanqab features a cold semi-arid climate, marked by long, cold and very dry winters, warm, somewhat humid summers, and strong winds, especially in spring. More than half of the annual precipitation falls in July and August alone.

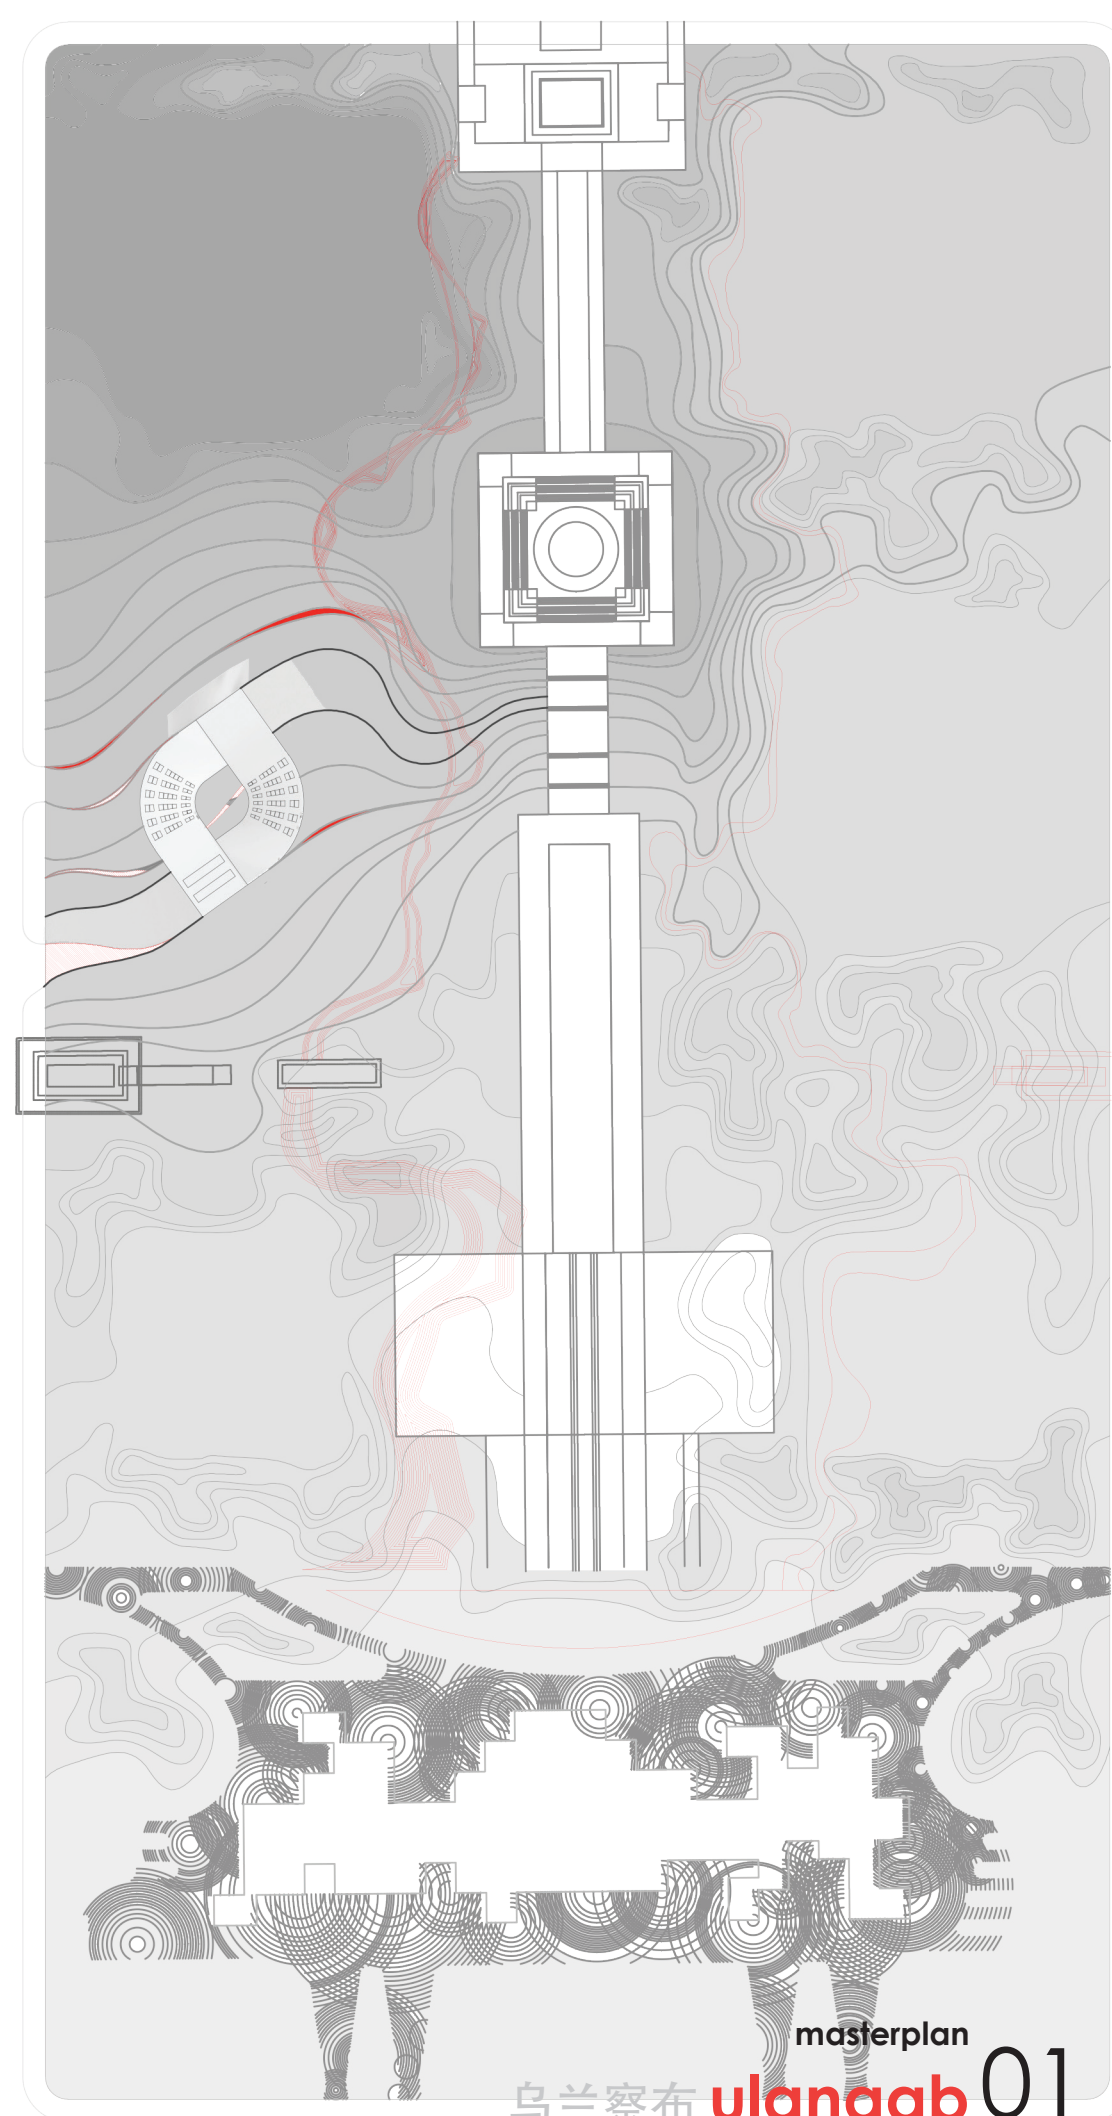

Wulanchabu has vast picturesque grasslands which are a beautiful alpine meadow with many natural lakes scattered throughout the grassland. The largest wind power plant in Asia also stands in the grassland.

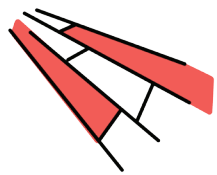

The local folk residence, yurt, a kind of round-roofed tent made of felt, the nomadic life of Mongolian people in depth.

Situated in the heart of the huge Wulanchabu Grassland, Gegental is a beautiful place with thriving green grass, abundant water and herds of sheep and cows. It is the largest place to enjoy the wild grassland of Hohhot and the nomadic life of Mongolian people.

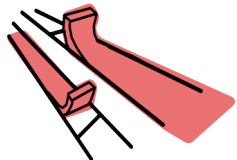

grassland

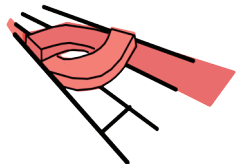

Before the expansion of the city, the surrounding area was devoted exclusively to agricultural crop, one of the sources of wealth of the city. With growing urban plans have been abandoned crop land and has been at the expense of urban submission.

wasteland

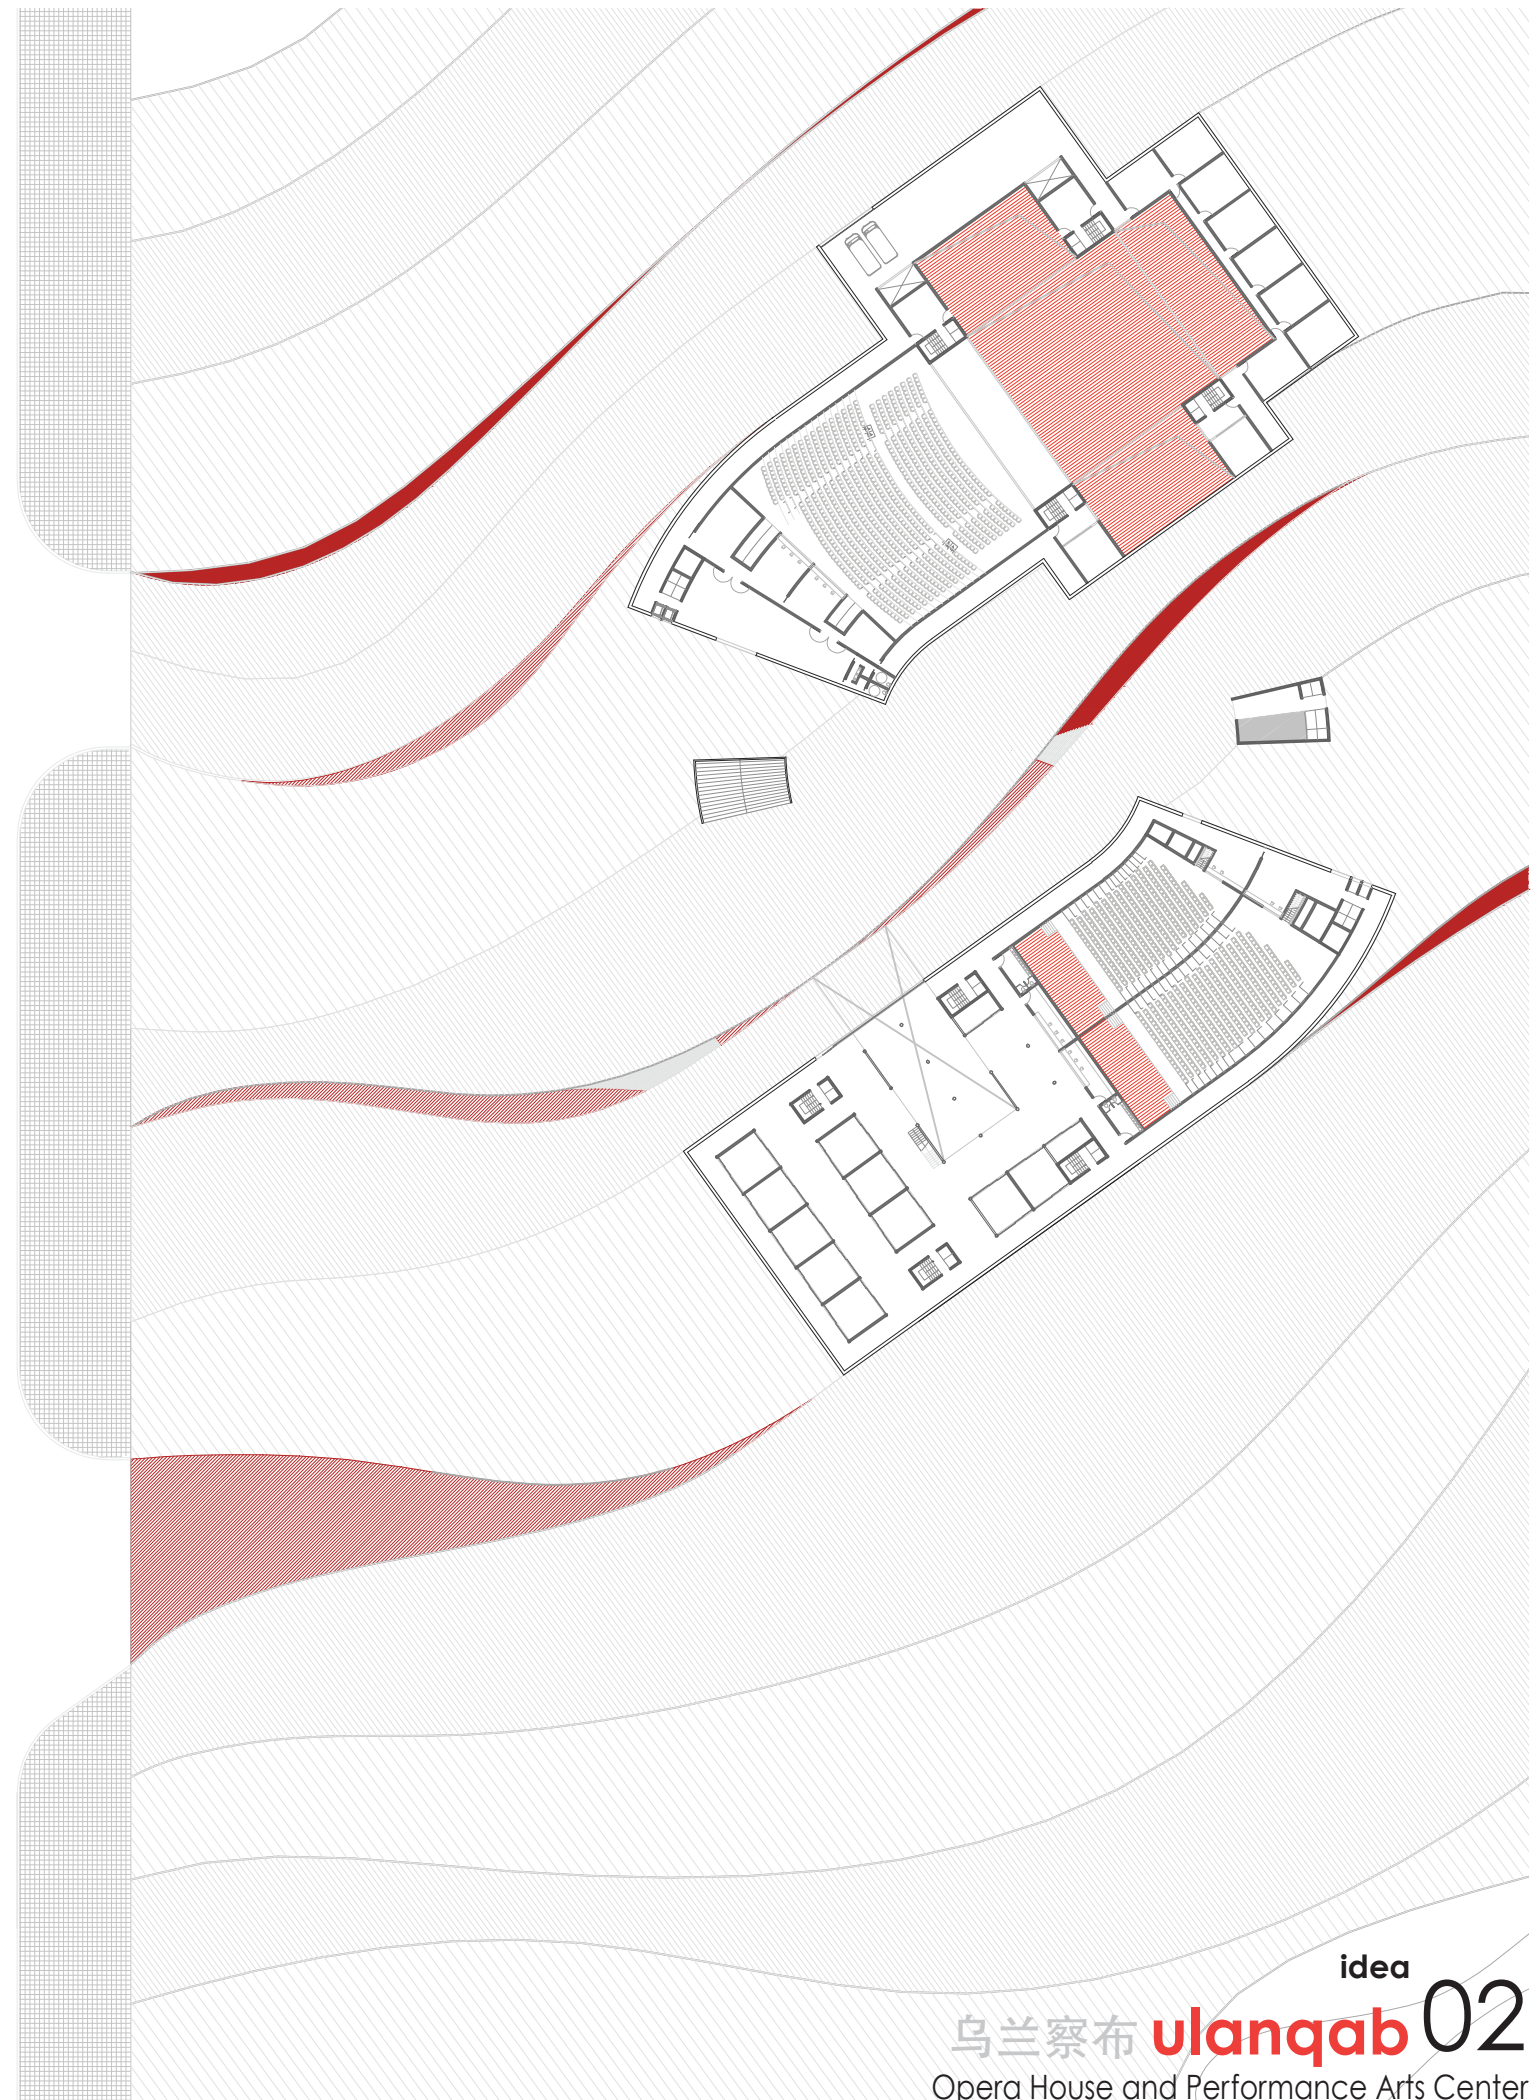

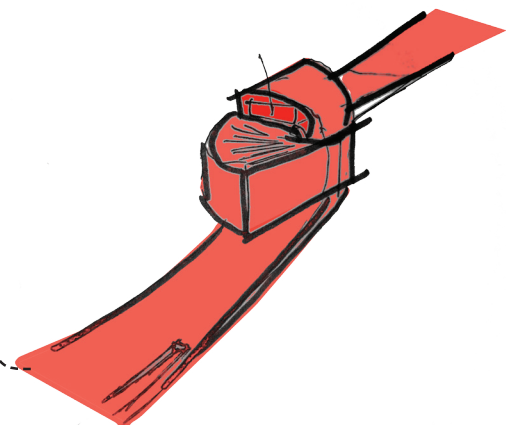

Abandoned land breaks waiting to be urbanized. The erosive action of the wind in the area will make the pieces of earth arise and become detached from its original site.

wind power

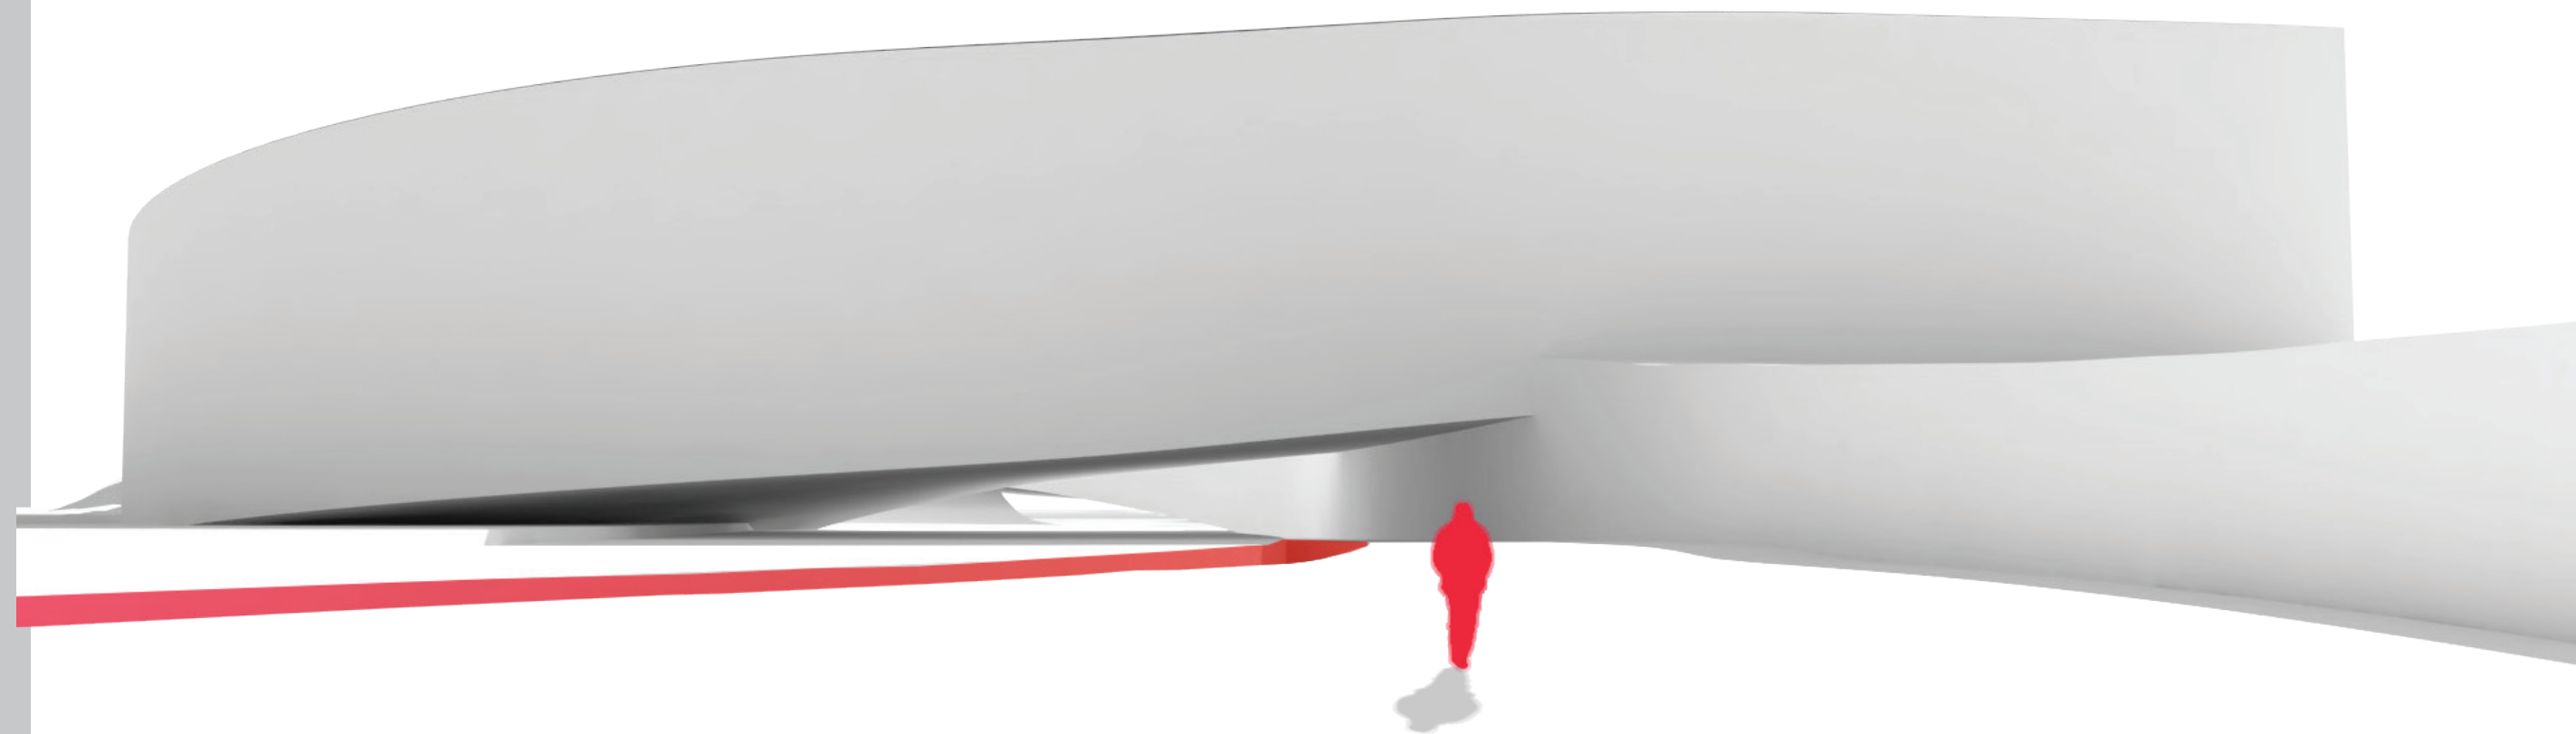

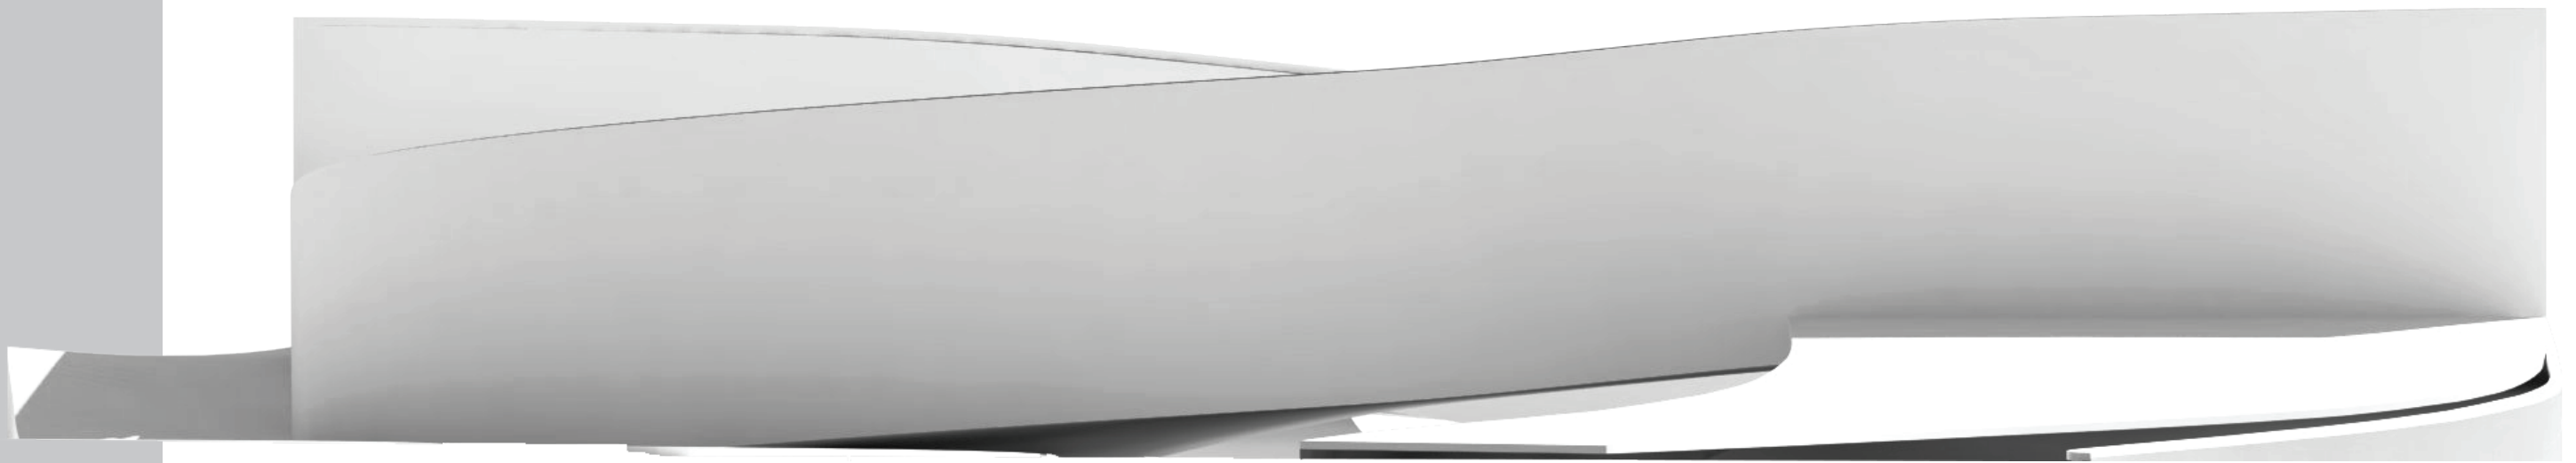

Strong winds incidents from the mountains will tear earth from the ground. It is when the earth, seeking to remain in place, balancing, intertwine forming a single element that looks, nostalgic, to the ancient city of Jining (what could have been), and the southern profile (which was).

Performance center design requirement		
Division	Name	m2
Performance center entrance lobby	Lobby (Art exhibits corridor, Exhibition hall)	1100
	VIP room	500
	Café and restaurant	1000
	Art Shop	25
