

JACENA (A) - (13) $h_2 = 300$

Kury u. lind

$$P_{jo} = \frac{360 + 290}{2} \times 350 = 1.140$$

$$Kuro = 10 \times 0.2 \times 1600 = 320$$

$$P_{kuro} = 0.5 \times 0.2 \times 2400 = 120$$

$$\underline{1.580 < 1.600}$$

$$\frac{p l^2}{8} = \frac{1600 \times 3^2}{8} = 200 \times 9 = 180000 \text{ K.cm.}$$

TIBANTE

$$\frac{JACENA}{1600 \times 3} = \frac{4800}{2} = 2400 \text{ Kp.}$$

Kuro

$$\frac{360 \times 1 \times 1600}{2} = \frac{288000}{5280 \text{ Kp}} < 6.000 = 1200 \text{ K.cm}$$

$$ch = \frac{1200 \times 1.7^2}{8} = 486 \text{ K.cm}$$
