<b>1</b>	<b>Summary of the thesis</b>	<b>1</b>
1.1	Introduction . . . . .	1
1.2	Objectives . . . . .	2
1.2.1	Conservativeness of the positivity conditions for fuzzy summations . . . . .	2
1.2.2	Local stability approach . . . . .	3
1.2.3	Tensor-product fuzzy systems . . . . .	3
1.2.4	Memberships shape . . . . .	4
1.2.5	Uncertain memberships . . . . .	4
1.3	Structure of the thesis . . . . .	4
<b>I</b>	<b>State of the art</b>	<b>7</b>
<b>2</b>	<b>Linear Matrix Inequalities stability analysis</b>	<b>9</b>
2.1	Introduction . . . . .	9
2.2	Stability concept . . . . .	10
2.2.1	Nonlinear systems . . . . .	10
2.2.2	Lyapunov stability . . . . .	11
2.2.3	Lyapunov stability theorem . . . . .	12
2.3	Linear matrix inequalities (LMI) . . . . .	14

2.3.1	Properties of linear matrix inequalities . . . . .	14
2.3.2	Schur complement . . . . .	15
2.3.3	S-procedure . . . . .	16
2.3.4	Finsler Lemma . . . . .	17
2.3.5	Linear matrix inequalities problems . . . . .	17
2.3.6	Solving LMIs . . . . .	18
<b>3</b>	<b>Takagi-Sugeno Models</b>	<b>19</b>
3.1	Introduction . . . . .	19
3.2	Definitions . . . . .	19
3.2.1	Takagi-Sugeno Fuzzy Models . . . . .	20
3.2.2	PDC-controller . . . . .	21
3.3	Sector nonlinearity . . . . .	21
3.4	Stability of fuzzy models . . . . .	25
3.4.1	Stability of open-loop system . . . . .	25
3.4.2	Stability of PDC closed-loop systems . . . . .	26
3.5	Control Design for Takagi-Sugeno Fuzzy Systems . . . . .	28
3.5.1	Positiveness conditions . . . . .	31
<b>II</b>	<b>Researched issues and contributions</b>	<b>35</b>
<b>4</b>	<b>Roadmap: Reducing the gap between the fuzzy and non-linear control</b>	<b>37</b>
4.1	Introduction . . . . .	37
4.2	Some Shadows . . . . .	38
4.2.1	Conservatism of the Lyapunov approach . . . . .	39
4.2.2	Conservativeness of the positivity conditions for fuzzy summations . . . . .	39

---

4.2.3	Intrinsic conservativeness of the fuzzy approach versus a nonlinear one . . . . .	40
4.2.4	Computational power . . . . .	40
4.3	Some Lights . . . . .	40
4.3.1	Arbitrarily complex Lyapunov functions . . . . .	41
4.3.2	Asymptotically necessary and sufficient conditions for fuzzy summations. . . . .	41
4.3.3	Membership shape techniques . . . . .	42
4.3.4	Local stability approach . . . . .	43
4.3.5	Uncertain memberships . . . . .	44
4.4	Conclusions . . . . .	45
<b>5</b>	<b>Relaxed LMI conditions, an asymptotically approach</b>	<b>47</b>
5.1	Introduction . . . . .	47
5.2	Problem statement . . . . .	48
5.2.1	Multi-index notation. . . . .	50
5.3	Relaxed positivity conditions via dimensionality expansion	52
5.3.1	Relaxation by increasing the number of positivity conditions . . . . .	53
5.3.2	Relaxation via artificial decision variables . . . . .	56
5.3.3	Generalization to higher-dimensional fuzzy sum- mations . . . . .	58
5.3.4	Recursive procedure . . . . .	59
5.3.5	Number of conditions and decision variables . . . . .	61
5.3.6	Comparison to previous literature . . . . .	62
5.4	Examples . . . . .	64
5.5	Conclusions . . . . .	76

<b>6</b>	<b>Local stability results</b>	<b>79</b>
6.1	Introduction . . . . .	80
6.2	Local Fuzzy Models . . . . .	80
6.2.1	Stability analysis . . . . .	84
6.3	Stability analysis of Feedback Systems . . . . .	86
6.4	Algorithm . . . . .	88
6.5	Examples . . . . .	88
6.6	Conclusions . . . . .	92
<b>7</b>	<b>Relaxed LMI conditions: Overlap in membership functions</b>	<b>93</b>
7.1	Introduction . . . . .	93
7.2	Relaxed conditions with overlap information . . . . .	94
7.2.1	Single sum relaxation . . . . .	94
7.2.2	Double-sum relaxation . . . . .	96
7.3	Shape-dependent positivity conditions for double fuzzy summations . . . . .	99
7.3.1	Particular cases . . . . .	102
7.3.2	Obtention of bounds in practice. . . . .	103
7.4	Generalization to higher dimensions . . . . .	105
7.4.1	Multi-dimensional index notation . . . . .	106
7.4.2	Relaxed conditions . . . . .	107
7.5	Examples . . . . .	110
7.6	Conclusions . . . . .	117
<b>8</b>	<b>Stability Analysis with uncertain membership functions</b>	<b>119</b>
8.1	Introduction . . . . .	119
8.2	Problem statement . . . . .	120

---

8.3	Main Result . . . . .	122
8.4	Particular cases . . . . .	125
8.5	Examples . . . . .	129
8.6	Conclusions . . . . .	134
<b>9</b>	<b>Tensor product TS systems</b>	<b>135</b>
9.1	Introduction . . . . .	135
9.2	Problem Statement . . . . .	136
9.2.1	Sufficient Positivity Conditions . . . . .	140
9.2.2	Tensor-product fuzzy systems . . . . .	141
9.2.3	Multi-dimensional tensor-product fuzzy systems . . . . .	142
9.3	Closed-loop tensor-product fuzzy systems . . . . .	149
9.4	Relaxed stability and performance conditions for TPTS fuzzy systems . . . . .	151
9.5	Robust stability of LTI multiaffine systems . . . . .	153
9.5.1	Robust stability conditions . . . . .	154
9.6	Examples . . . . .	155
9.7	Conclusions . . . . .	164
<b>III</b>	<b>Conclusions</b>	<b>165</b>
<b>10</b>	<b>Conclusions and future work</b>	<b>167</b>
10.1	Future research lines . . . . .	170
<b>11</b>	<b>Published Contributions</b>	<b>171</b>
	<b>References</b>	<b>175</b>
