Abstract **i**

Resumen **iii**

Resum **v**

Abbreviation and Acronyms **vii**

Notations and Conventions **ix**

Acknowledgments **xiii**

1 Introduction and scope **1**
1.1 Introduction 1
1.2 Motivation and scope of the thesis 2
1.3 Organization of the thesis 4

2 Mathematical and Physical Foundations in Room Acoustic Simulation **7**
2.1 Introduction 7
2.2 Mathematical foundations 8
2.3 Physical foundations 11
2.3.1 Euler and conservation of mass equation 12
2.3.2 Solutions to the wave equation 15
2.3.2.1 Plane waves 16
2.3.2.2 Spherical waves 17
2.3.2.3 Acoustic energy, intensity and source power 19
2.4 Some sound propagation considerations in enclosures 21
2.4.1 Boundary conditions 22
2.4.1.1 Wall impedance, reflection factor and absorbing coefficient 22
2.4.1.2 Fundamental conditions for physically representable impedance model 24

2.4.1.3 The locally reacting impedance problem . . 25
2.4.1.4 Hard-backed layer of porous material impedance 28
2.4.2 Sound source modeling 31
2.4.2.1 Directive sources 31
2.4.2.2 Some basic directive sources: from monopoles to quadripoles 33
2.5 Room acoustics as an inhomogeneous boundary value problem 39
2.6 Discussion 40

3 Room Acoustics Simulation Techniques 43
3.1 Introduction 43
3.2 Geometrical methods 44
3.2.1 Ray-tracing method 45
3.2.2 Image-source method 46
3.2.3 Hybrid and alternative geometrical methods 47
3.3 Wave methods in the frequency domain 49
3.3.1 Finite Element Method 49
3.3.2 Boundary Element Method 51
3.4 Wave methods in the time domain 51
3.4.1 Suitability of the discrete-time methods for room acoustic simulation: a survey 52
3.4.2 Alternative methods in discrete-time modeling . . . 57
3.5 Discussion 59

4 Discrete Time-based Methods for Room Acoustic Simulation 61
4.1 Introduction 62
4.2 The Finite-Difference Time-Domain (FDTD) method 63
4.2.1 Grid Dispersion 68
4.2.2 Stability 70
4.2.3 The FDTD method in a homogeneous medium . . . 72
4.2.4 The FDTD method in an inhomogeneous medium . 73
4.3 The Digital Waveguide Mesh (DWM) method 76
4.3.1 Plane waves in the DWM model 80
4.4 Equivalence between the FDTD and DWM methods 82
4.5 Hybrid models 86
4.6 Sound propagation simulation through discrete-time methods 88

4.7 Wave Digital Filters 96
4.7.1 A WDF variables approach 96
4.7.2 Wave digital elements 97
4.7.3 Wave digital element interconnection 99
4.8 Discussion 102

5 Frequency-Dependent Boundary Conditions for Discrete-Time Methods 105
5.1 Introduction 106
5.2 Boundary conditions in the DWM method 107
5.2.1 Previous approaches 107
5.2.2 Physical interpretation of the use of the reflection factor as a boundary condition 112
5.2.2.1 Examples 115
5.2.3 Realization of a LRI model in a DWM based on angle detection 118
5.2.3.1 Angle detection 119
5.2.3.2 Filter compensation 124
5.2.3.3 Examples 126
5.2.3.4 Limitations of the method 127
5.2.4 Realization of a LRI model in a DWM based on mixing modeling strategies 129
5.2.4.1 Mixing modeling strategy 129
5.2.4.2 Impedance model 131
5.2.4.3 Model description 133
5.2.4.4 Analysis of the system 138
5.2.4.5 Examples 141
5.3 Boundary conditions in the FDTD method 147
5.3.1 Previous approaches 147
5.3.2 Proposed method 149
5.3.2.1 Interaction between FDTD and wave variables 149
5.3.2.2 Coupling model 152
5.3.2.3 Examples 152
5.4 Experimental evaluation of boundary conditions in a DWM 160
5.4.1 Measurement set-up 161
5.4.2 Simulation set-up 163
5.4.3 Discussion of the results 164
5.5 Discussion 165

6 Directive Sources in Discrete-Time Methods **169**
6.1 Introduction 170
6.2 Sinusoidal directive sources 171
6.2.1 Examples 174
6.2.2 Influence of the mesh dispersion 179
6.3 Broadband directive sources 183
6.3.1 Examples 185
6.4 Discussion 194

7 Conclusions and Future Research Lines **195**
7.1 Summary and conclusions 195
7.2 Contributions of this thesis 197
7.3 Future research lines 200

A A note on the dispersion of some discrete-time methods **203**

B Software implementation **207**
B.1 Mesh definition 207
B.1.1 Verifying the mesh modeling 209
B.1.2 Example 211
B.2 Graphical user interface 212
B.3 Parallelization process 215
B.3.1 Parallel architectures 217
B.3.2 Hardware and software used in the experiments . . . 217
B.4 Computational cost and memory requirements 218

Bibliography **221**
