

# CONTENTS

<b>Contents</b>	<b>xv</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Pattern Recognition . . . . .	1
1.2 Natural language processing . . . . .	2
1.3 Scientific goals . . . . .	3
1.4 Description of the Tasks used in the experiments . . . . .	4
1.4.1 EUTRANS . . . . .	4
1.4.2 ALBAYZIN geographic corpus . . . . .	4
1.4.3 XEROX corpus . . . . .	5
1.4.4 WSJ corpus . . . . .	5
1.4.5 Other ITG tasks . . . . .	5
<b>2 Interactive Pattern Recognition</b>	<b>7</b>
2.1 Motivation . . . . .	7
2.2 Introduction to Interactive Pattern Recognition . . . . .	8
2.3 A formal framework for Interactive Pattern Recognition . . . . .	10
2.4 Multi-modality in IPR . . . . .	11
2.5 Adaptive learning . . . . .	12
2.6 Evaluating an IPR System . . . . .	14
2.7 Summary of contributions . . . . .	15
<b>3 Interactive Speech Recognition</b>	<b>17</b>
3.1 Introduction to Speech Recognition . . . . .	17
3.1.1 Automatic Speech Recognition Systems . . . . .	17
Speech acquisition . . . . .	18
Pre-process and feature extraction . . . . .	18
Statistical Speech Recognition . . . . .	18
3.1.2 Acoustic modelling . . . . .	20
3.1.3 Introduction to Hidden Markov Models . . . . .	20
Hidden Markov Model for acoustic modelling . . . . .	20
3.1.4 The estimation problem in HMMs . . . . .	21
3.1.5 The decoding problem in an HMM . . . . .	24
3.1.6 Lexical modelling . . . . .	25
3.1.7 Language modelling . . . . .	26
3.2 Computer Assisted Speech Transcription . . . . .	28
3.2.1 Formal framework for CAST . . . . .	28

3.2.2	Adapting the language model . . . . .	30
3.2.3	Searching . . . . .	30
3.3	More Efficient Search Approaches. Using Word Graphs . . . . .	32
3.3.1	Error Correcting Prefix Parsing . . . . .	33
3.3.2	A general model for probabilistic prefix parsing . . . . .	34
3.3.3	An adaptive learning approach to estimate the edition operations probability . . . . .	39
3.3.4	The role of the word graph probabilities in probabilistic prefix ECP . . . . .	39
3.4	Experimental results . . . . .	40
3.4.1	Corpora . . . . .	40
3.4.2	Error Measures . . . . .	41
3.4.3	Experiments . . . . .	42
3.4.4	Results . . . . .	43
3.5	Summary of contributions . . . . .	47
<b>4</b>	<b>Interactive Text Generation</b>	<b>49</b>
4.1	Introduction . . . . .	49
4.1.1	Interactive Text Generation and Interactive Pattern Recognition	50
4.2	Developing an interactive text generation system . . . . .	51
4.2.1	Language modelling. Using $n$ -grams . . . . .	51
4.2.2	Searching for a suffix . . . . .	51
4.2.3	A greedy algorithm to predict suffixes . . . . .	52
4.2.4	Dealing with sentence length . . . . .	55
4.3	Experiments . . . . .	56
4.3.1	Corpora . . . . .	57
4.3.2	Results . . . . .	57
4.4	Predicting at character-level . . . . .	59
4.4.1	Predicting at character level using character LMs . . . . .	61
4.4.2	Predicting at character level using both word and character LMs . . . . .	63
4.4.3	Using n-best lists in very constrained scenarios . . . . .	63
4.5	Adaptive learning . . . . .	65
4.5.1	Some strategies for adaptive learning . . . . .	65
Cache models . . . . .	66	
Interpolating with a unigram model estimated from the test .	66	
Feeding the original models with test data . . . . .	67	
4.5.2	Deeper study of an adaptive learning scenario . . . . .	68
Learning from scratch . . . . .	69	
4.6	ITG applications . . . . .	71
4.6.1	ITG as a computer-programming assistance tool . . . . .	72
4.6.2	ITG and information retrieval . . . . .	73
	Integrating ITG into a natural language based information retrieval system . . . . .	74

4.6.3	Brief description of the AMSABEL system . . . . .	74
4.6.4	ITG experiments . . . . .	76
4.7	Summary of contributions . . . . .	77
<b>5</b>	<b>Multi-modal Interactive Pattern Recognition</b>	<b>81</b>
5.1	Multi-modality in IPR systems . . . . .	81
Case of study . . . . .	82	
5.2	Introduction to machine translation . . . . .	82
5.3	Computer-Assisted Translation . . . . .	83
5.3.1	Speech Recognition for Computer-Assisted Translation . . . . .	83
Free target language dictation . . . . .	83	
5.3.2	Speech decoding framework in the CAT paradigm . . . . .	84
5.4	Implementing speech decoding in a CAT system . . . . .	87
5.4.1	DEC scenario . . . . .	87
5.4.2	DEC-PREF scenario . . . . .	87
5.4.3	CAT-PREF scenario . . . . .	88
5.4.4	CAT-SEL scenario . . . . .	93
5.4.5	Corpora and evaluation . . . . .	93
Corpus features . . . . .	93	
Quality evaluation . . . . .	95	
5.4.6	Experimental results . . . . .	96
MT and CAT text-only experiments . . . . .	96	
Speech-enabled CAT experiments . . . . .	97	
5.5	Adaptive learning . . . . .	100
5.6	Improving the accuracy of CAT-PREF by imposing simple user constraints . . . . .	102
5.7	Summary of contributions . . . . .	103
<b>6</b>	<b>Conclusions</b>	<b>105</b>
6.1	Main contributions . . . . .	105
6.2	Selected derived publications . . . . .	106
6.3	Future work . . . . .	108
<b>Bibliography</b>		<b>109</b>
<b>A Appendix. Prototypes</b>		<b>115</b>
A.1	Computer assisted speech transcription prototype . . . . .	115
A.1.1	Objectives . . . . .	115
A.1.2	Functional Requirements . . . . .	116
A.1.3	Architecture . . . . .	116
Prediction Engine . . . . .	116	
Graphical User Interface . . . . .	117	
Communication module . . . . .	117	
A.2	Interactive text generation prototype . . . . .	117

A.2.1 Objectives . . . . .	117
A.2.2 Functional requirements . . . . .	118
A.3 Architecture . . . . .	118
A.4 Multi-modal Computer assisted translation prototype . . . . .	119
A.4.1 Objectives . . . . .	119
A.4.2 Functional Requirements . . . . .	120
A.4.3 Architecture . . . . .	120
Speech recognizer . . . . .	120
Translation engine . . . . .	120
Graphical User Interface . . . . .	120
Communication module . . . . .	121
