

Index

1. Introduction.....	1
1.1 Bio-based food packaging.....	3
1.2 Polyhydroxyalkanoates: microbial biopolyesters.....	6
1.3 Antimicrobial active packaging.....	9
1.4 Metal nanoparticles as antimicrobial agents in food packaging.....	11
1.4.1 Silver nanoparticles.....	12
1.4.2 Zinc oxide nanoparticles.....	13
1.4.3 Copper oxide nanoparticles.....	15
1.5 Electrospinning as an emerging processing technology in food packaging.....	16
2. General and specific aims.....	27
3. Results.....	33
Chapter I: Stabilization of antimicrobial silver nanoparticles by a polyhydroxyalkanoate obtained from mixed bacterial culture.....	37
Chapter II: Stabilized nanosilver based antimicrobial poly(3-hydroxybutyrate-co-3-hydroxyvalerate) nanocomposites of interest in active food packaging.....	67
Chapter III: On the use of the electrospinning coating technique to produce antimicrobial polyhydroxyalkanoate materials containing <i>in situ</i> stabilized silver nanoparticles.....	105
Chapter IV: Antiviral properties of silver nanoparticles against norovirus surrogates and their efficacy in coated polyhydroxyalkanoates systems.....	133

Chapter V: Optimization and scaling up of the biosynthesis of silver nanoparticles and polyhydroxybutyrate nanocomposites of interest in antimicrobial applications.....	155
Chapter VI: The impact of zinc oxide particle morphology as an antimicrobial and when incorporated in Poly(3-hydroxybutyrate-co-3-hydroxyvalerate) films for food packaging and food contact surfaces applications.....	185
Chapter VII: Antimicrobial Nanocomposites and Electrospun Coatings Based on Poly(3-hydroxybutyrate-co-3-hydroxyvalerate) and Copper Oxide Nanoparticles for Active Packaging and Coating Applications.....	225
4. General discussion.....	259
5. Conclusions.....	271
6. Annexes.....	277
Annex A: List of publications.....	279
Annex B: Additional works.....	285
