**CONTENTS**

Acknowledgements .....	i
Abstract.....	iii
Resumen .....	vi
Resum .....	ix
Dissemination of results .....	xiii
Acronyms and abbreviations .....	xvii
1. Introduction .....	1
1.1 The rise of bioanalysis .....	3
1.2 Sensors, biosensors, and biosensing.....	3
1.3 Biorecognition systems .....	4
1.4 Detection techniques .....	8
1.5 Point-of-need.....	14
1.6 Compact disk-based biosensors .....	16
1.7 References.....	23
2. Objectives .....	27
3. Results and discussion .....	31
<i>Chapter 1</i>	
3.1 Thermo-chromic/photochromic etching disk technologies for biosensing.....	35
3.1.1 Introduction .....	37
3.1.2 Towards photochromic and thermo-chromic biosensing.....	39
3.1.3 Total analysis systems with Thermo-chromic Etching Discs .....	61
- Supporting information.....	83
3.1.4 Conclusions .....	91
<i>Chapter 2</i>	
3.2 In silico optimization and exploration biosensing.....	93

---

3.2.1 Introduction.....	95
3.2.2 INSEL: an in silico method for optimizing and exploring biorecognition assays.....	97
- Electronic supplementary information .....	107
3.2.3 Conclusions.....	115
<i>Chapter 3</i>	
3.3 SERS-on-a-disk .....	117
3.3.1 Introduction.....	119
3.3.2 Label-free SERS analysis of proteins and exosomes with large-scale substrates from recordable compact disks.....	121
- Supplementary material.....	137
3.3.3 Conclusions.....	149
<i>Chapter 4</i>	
3.4 Diffraction-based sensing disk biosensors.....	151
3.4.1 Introduction.....	153
3.4.2 Diffraction-based sensing with biogratings for qualitative and quantitative analytical applications .....	155
- Supplementary material.....	177
3.4.3 Protein diffractive gratings as active optical substrates for high-throughput label-free immunosensing.....	189
- Supporting information .....	207
3.4.4 Conclusions.....	219
4. General discussion.....	221
5. General conclusions .....	227
