

“Contribution to the understanding of filtration and pressure drop phenomena in wall-flow DPFs”

Presented by: D. EMANUELE ANGIOLINI

Supervised by: DR. D. PEDRO PIQUERAS CABRERA

Contents

List of Figures

List of Tables

Nomenclature

1 Introduction

1.1 Background

1.2 Motivation of the study

1.3 Objectives

1.4 Methodology

1.5 References

2 Background and state of the art

2.1 Introduction

2.2 Wall-flow DPF modelling in OpenWAM™

2.3 Filtration models

2.4 DPF design criteria

2.5 Pre-turbo aftertreatment placement

2.6 Pre-DPF water injection technique

2.7 Summary

2.8 References

3 Wall-flow PF filtration model

3.1 Introduction

3.2 Species transport equation

3.3 Filtration Mechanisms

3.4 Filtration regimes

3.5 Pulsating flow effect

3.6 Soot distribution for water injection modelling

3.7 Loading processes

3.8 Peclet number - soot penetration correlation

3.9 Particle size effect on filtration efficiency

3.10 Summary

3.11 References

4 Aftertreatment volume downsizing in pre- and post-turbo configuration

4.1 Introduction

4.2 Modelling methodology

4.3 Diesel Oxidation Catalyst

4.4 Diesel Particulate Filter

4.5 Cost analysis

4.6 Aftertreatment volume downsizing effect on engine transient operation

4.7 Summary

4.8 References

5 Soot deposition analysis

5.1 Introduction

5.2 Methodology and experimental facilities

5.3 Pre-DPF water injection analysis

5.4 Peclet number effect on soot deposition

5.5 Summary

5.6 References

6 Conclusions and future works

6.1 Introduction

6.2 Main contributions

6.3 Future works

6.4 References
