<b>Abstract</b>	<b>vii</b>
<b>Resumen</b>	<b>ix</b>
<b>Resum</b>	<b>xi</b>
<b>Acknowledgements</b>	<b>xiii</b>

## **I Thesis overview**

<b>1 Introduction</b>	<b>1</b>
1.1 Motivation . . . . .	1
1.2 State-of-the-art . . . . .	3
1.2.1 Structural optimization . . . . .	3
1.2.2 Immersed Boundary Method integration . . . . .	5
1.2.3 Boundary conditions in the Immersed Boundary Method . . . . .	6
1.2.4 Shape sensitivity analysis . . . . .	7
1.3 Objective . . . . .	7
1.4 Thesis layout . . . . .	9
<b>2 Problem description</b>	<b>10</b>
2.1 Governing equations . . . . .	10
2.2 Finite Element approximation using Cartesian grids . . . . .	12
2.3 Structural shape optimization . . . . .	14
<b>3 Contributions</b>	<b>16</b>
3.1 Exact representation of an immersed boundary . . . . .	16
3.1.1 Intersections . . . . .	18
3.1.2 Integration over subdomains . . . . .	23
3.2 Boundary conditions . . . . .	28

3.3	<i>h</i> -adapted meshing . . . . .	32
3.3.1	Geometrical refinement . . . . .	33
3.3.2	Error-based refinement . . . . .	36
3.4	Shape sensitivities and optimization . . . . .	38
3.4.1	Design velocity fields . . . . .	39
3.4.1.1	Generation of boundary velocity fields . . . . .	40
3.4.1.2	Generation of domain velocity fields . . . . .	46
3.4.2	Calculating shape sensitivities with FEAVox . . . . .	48
3.4.2.1	Evaluation of derivatives . . . . .	49
3.4.3	Optimization using Cartesian grids . . . . .	50
3.4.3.1	Data sharing . . . . .	51
3.4.3.2	Nested domain reordering . . . . .	52
3.4.3.3	Automatic <i>h</i> -adaptive mesh projection . . . . .	55
<b>4</b>	<b>Closure</b>	<b>60</b>
4.1	Summary . . . . .	60
4.2	Open research lines . . . . .	61
	<b>Bibliography</b>	<b>63</b>

## II Articles

<b>Paper A:</b>	<b>Exact 3D boundary representation in finite element analysis based on Cartesian grids independent of the geometry</b>	<b>77</b>
<b>Paper B:</b>	<b>Stabilized method of imposing Dirichlet boundary conditions using a recovered stress field</b>	<b>117</b>
<b>Paper C:</b>	<b>Robust <i>h</i>-adaptive meshing strategy considering exact arbitrary CAD geometries in a Cartesian grid framework</b>	<b>157</b>
<b>Paper D:</b>	<b>An extension of shape sensitivity analysis to an Immersed Boundary Method based on Cartesian grids</b>	<b>205</b>
<b>Paper E:</b>	<b>Structural shape optimization using Cartesian grids and automatic <i>h</i>-adaptive mesh projection</b>	<b>249</b>
