

## Table of contents

Summary

<b>Chapter 1.</b> Introduction. Resource optimization in the measurement of airborne emissions from animal houses	1
<b>Chapter 2.</b> Evaluation of N <sub>2</sub> and N <sub>2</sub> O formation in ammonia scrubbers: options for performance measurement	23
<b>Chapter 3.</b> Evaluation of the ammonia removal efficiency of a chemical scrubber installed in a pig facility using two methods	41
<b>Chapter 4.</b> Technical note: A flux chamber for measuring gas emissions from rabbits	61
<b>Chapter 5.</b> Daily carbon dioxide emission and activity of rabbits during the fattening period	81
<b>Chapter 6.</b> Use of CO <sub>2</sub> balances to determine ventilation rates in a fattening rabbit house	97
<b>Chapter 7.</b> Effects of diurnal emission patterns and sampling frequency on precision of measurement methods for daily ammonia emissions from animal houses	113
<b>Chapter 8.</b> General conclusions and Future work	135
List of publications	148
