

TABLE OF CONTENTS

Summary.....	1
Resumen.....	3
Resum.....	5
General Introduction	8
1. Life cycle and current situation	10
2. The fish testis and spermatozoa	11
2.1. General structure of the teleost testis	11
2.2. General structure of the fish spermatozoa	11
3. Seminal plasma in fish.....	11
4. Sperm motility in fish	12
4.1. Model of the sperm activation process in marine fish.....	13
5. Factors affecting the motility	14
5.1. Osmolality.....	14
5.2. pH.....	15
5.3. Ions fluxes	15
5.3.1. Mechanism to study the intracellular ions transport in the sperm cells	15
5.3.2. Ion changes in sperm cells.....	16
☐ Potassium channels	16
☐ Calcium increase.....	17
☐ Sodium.....	18
5.4. Membrane potential.....	18
5.5. Chemotaxis	19
5.6. cAMP.....	19
6. Spermatozoa volume changes in fish	19
7. Projects, grants and companies involved in this Thesis	20
Objectives.....	23
CHAPTER 1 Role of potassium and pH on the initiation of sperm motility in the European eel.....	25
CHAPTER 2 Sodium affects the sperm motility in the European eel	49
CHAPTER 3 Role of calcium on the initiation of sperm motility	

in the European eel	68
CHAPTER 4 Identification of the major proteins present in the seminal plasma of European eel, and how hormonal treatment affects their evolution.	
Correlation with sperm quality.	92
General discussion	115
1. The role of ionic agents during the sperm motility activation: seminal plasma vs. activation medium.....	117
2. The role of ionic agents in the regulation of the sperm volume.....	119
3. New data about which are the ions pathways during the sperm motility activation in marine fish	120
4. Protein composition of the seminal plasma: a key for improvement of the sperm quality	122
Conclusion.....	124
References.....	128
