Agraïments	v
Resum	vii
Resumen	ix
Abstract	xi
1 Introduction	1
Motivations	2
Thesis Outline	2
2 State of the Art	7
2.1 Robot visual servoing	8
2.1.1 Basic notation	8
2.1.2 Kinematics	8
2.1.3 Classical continuous control laws	9
2.1.4 Robot-camera configurations	10
2.1.5 Visual servoing schemes	12
2.1.5.1 Position Based Visual Servoing	13
2.1.5.2 Image Based Visual Servoing	15
2.1.5.3 PBVS-IBVS comparison	15
2.1.5.4 VS schemes combining PBVS and IBVS	17
2.1.6 Constraints in visual servoing	17
2.1.7 Robot control	17
2.1.8 Computer vision algorithm	18

2.2	Sliding mode control	18
2.3	Task-priority based redundancy resolution	19
2.3.1	Regularization	21
3	Geometric invariance using sliding mode control	23
3.1	Conventional sliding mode	25
3.1.1	Using matrix inversion	26
3.1.2	Higher-order invariance	26
3.1.3	Order of the control action	27
3.1.4	Proof of condition Eq. (3.5)	28
3.2	One-side sliding mode	29
3.2.1	Proof of condition Eq. (3.20)	31
4	Fulfillment of constraints in VS using SM control	33
4.1	Introduction	33
4.2	Preliminaries	39
4.3	Proposed approach	40
4.3.1	System tasks	40
4.3.2	Lie derivatives	41
4.3.3	Level 1: robot constraints	42
4.3.3.1	Visibility constraints	42
4.3.3.2	Constraints for the joint range limits	45
4.3.3.3	Constraints for the maximum joint speeds	45
4.3.3.4	Workspace constraints: object collision avoidance, task space limits and robot workspace limits	46
4.3.3.5	Acceleration equality for Level 1	47
4.3.3.6	Gradient vectors for Level 1	48
4.3.4	Level 2: reference tracking	49
4.3.4.1	Adaptive gain for the kinematic controller	50
4.3.4.2	Visual features and Jacobian matrix for PBVS	50
4.3.4.3	Visual features and Jacobian matrix for IBVS	50
4.3.5	Chattering	51
4.3.6	Additional remarks	51
4.3.6.1	Guidelines for the paramaters design	51
4.3.6.2	Moving constraints	52

4.3.6.3	Time derivatives	53
4.3.7	Computer Implementation	53
4.4	Simulation 2D PBVS: first example	55
4.4.1	Potential Field-Based Method	56
4.4.2	Simulation conditions and parameter values	57
4.4.3	Simulation results	58
4.5	Simulation 3D PBVS: case study	61
4.5.1	Simulation conditions and parameter values	62
4.5.2	Simulation results	64
4.6	Simulation 3D IBVS: case study	69
4.6.1	Simulation conditions and parameter values	70
4.6.2	Simulation results	72
4.7	Experiments: visibility constraints in PBVS and IBVS	73
4.7.1	Experimental conditions and parameter values	78
4.7.2	Experimental results	80
4.8	Experiment: workspace constraints in IBVS	86
4.8.1	Experiment conditions and parameter values	86
4.8.2	Experimental results	88
4.9	Conclusions	92
5	High-Order SM Control for Reference Tracking in VS	95
5.1	Introduction	95
5.2	Preliminaries	98
5.3	Proposed approach	99
5.3.1	Sliding mode control for reference tracking	99
5.3.1.1	Procedure to use sliding mode control	99
5.3.1.2	Sliding mode control using joint velocities	100
5.3.1.3	Sliding mode control using joint accelerations	100
5.3.1.4	Sliding mode control using joint jerks	101
5.3.1.5	Additional remarks	102
5.3.2	Comparison with classical continuous control	103
5.3.2.1	Classical continuous control using joint velocities	103
5.3.2.2	Classical continuous control using joint accelerations	103

5.3.2.3	Equivalences between sliding mode control and classical continuous control	104
5.4	Conditions for the simulations and experiments	104
5.5	Simulation: positioning task	105
5.5.1	Conditions for the simulated positioning task	105
5.5.2	Simulation results for the positioning task	107
5.6	Simulation: tracking task	112
5.6.1	Conditions for the simulated tracking task	112
5.6.2	Simulation results for the tracking task	113
5.6.3	Robustness against errors	118
5.7	Experiments: positioning and tracking tasks	123
5.7.1	Experiment conditions and parameter values	124
5.7.2	Experimental results with no errors	125
5.7.3	Experimental robustness against errors	132
5.8	Conclusions	134
6	PWM and PFM for VS in fully decoupled approaches	137
6.1	Introduction	137
6.2	Preliminaries: Decoupling DOFs in Visual Servoing Approaches	140
6.2.1	Partitioned approach to IBVS control	140
6.2.2	Image moments for partially decoupled IBVS	141
6.2.3	Homography and epipolar geometry to decouple rotation from translation in IBVS	141
6.2.4	Hybrid visual servoing	142
6.2.5	Position Based Visual Servoing	143
6.3	Proposed approach	143
6.3.1	Errors weighting and gain tuning	144
6.3.2	PWM and PFM visual servoing	145
6.4	Results	147
6.5	Practical issues	154
6.6	Conclusions	155
7	Other results in VS applications	157
7.1	DR-NLHOH for VS Applications	158
7.2	On Improving Robot IBVS Based on DR-RFCS	161
7.3	The Complete Design of the ORCA300-AUV	164

8	Conclusions	169
8.1	Main Results	171
8.2	Contributions	173
8.2.1	Articles published in journals	173
8.2.2	Articles submitted to journals	173
8.2.3	Articles published in conferences	174
8.3	Further work	175
A	Experimental Platform	177
