

# Table of Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Justification and background .....	1
1.2	Objectives and methodology .....	6
1.3	Thesis structure .....	9
	References .....	11
<b>2</b>	<b>The autoignition phenomenon</b>	<b>13</b>
2.1	Introduction .....	14
2.2	Chemical kinetics and autoignition theory .....	15
2.2.1	Chemical kinetics of the autoignition phenomenon ...	18
2.2.2	Ignition delay trends .....	26
2.2.3	Ignition delay under transient conditions. The Liven-good & Wu integral method .....	32
2.3	Experimental facilities and numerical tools to characterize the autoignition phenomenon .....	38
2.3.1	Experimental facilities .....	39
2.3.1.1	Combustion vessels .....	40
2.3.1.2	Shock tubes .....	42
2.3.1.3	Rapid Compression Machines .....	45
2.3.1.4	Rapid Compression-Expansion Machines ....	48
2.3.2	Current challenges in experimental autoignition studies .....	51
2.3.2.1	Advantages and disadvantages of the different facilities .....	52

---

2.3.2.2	Uncertainties on the autoignition phenomenon	53
2.3.2.3	Criteria to define the start of ignition .....	61
2.3.3	Chemical kinetic mechanisms .....	70
2.4	Research gaps present in the autoignition phenomenon .....	73
	References .....	78
<b>3</b>	<b>Experiments and methods</b>	<b>91</b>
3.1	Experimental facilities .....	93
3.1.1	RCEM .....	93
3.1.1.1	The RCEM available at CMT - Motores T�rmicos .....	93
3.1.1.2	The RCEM available at ETH - Zurich .....	96
3.1.2	Optical setups .....	97
3.1.2.1	Chemiluminescence .....	97
3.1.2.2	Spectroscopy .....	99
3.2	Parametric study performed .....	99
3.2.1	N-heptane and iso-octane .....	100
3.2.2	PRF25, PRF50 and PRF75 .....	102
3.2.3	N-dodecane .....	103
3.3	Methodological approach .....	105
3.3.1	RCEM .....	106
3.3.2	Optical techniques .....	108
3.3.2.1	Chemiluminescence .....	108
3.3.2.2	Spectroscopy .....	113
3.3.3	CHEMKIN .....	113
3.3.3.1	Validation of the detailed chemical kinetic mechanism for PRF mixtures .....	119
3.3.3.2	Validation of the reduced chemical kinetic mechanism for n-dodecane .....	125
3.A	Appendix: Validation of the experimental facility .....	132
3.A.1	Repeatability of the RCEM .....	132

3.A.2	Comparison versus other similar facilities .....	136
3.B	Appendix: Excited OH* sub-model .....	140
	References .....	141
<b>4</b>	<b>Theoretical and modeling results</b>	<b>145</b>
4.1	Design of synthetic EGR for autoignition studies .....	146
4.1.1	Definition of the synthetic EGR.....	147
4.1.2	Effect of the initial temperature on the ignition delay deviation .....	151
4.1.2.1	Thermodynamic effect .....	151
4.1.2.2	Chemical effect .....	155
4.1.3	Effect of the equivalence ratio and the oxygen molar fraction on the ignition delay deviation .....	160
4.1.4	Criterion to select the EGR composition .....	162
4.2	Theoretical development of an alternative procedure to predict ignition delays .....	163
4.2.1	Prediction of an ignition delay referred to a critical concentration of chain carriers .....	164
4.2.1.1	Method based on the Relative Concentration of Chain Carriers (RCCC) .....	167
4.2.1.2	Simplification to a global zero-order reaction	168
4.2.2	Prediction of cool flames .....	170
4.2.3	Prediction of the high-temperature stage .....	172
4.2.4	Conclusions .....	176
4.3	Validity of predictive methods based on a critical concentration of chain carriers .....	177
4.3.1	Analysis of the Livengood & Wu hypotheses .....	179
4.3.2	Comparison between the Livengood & Wu integral and the new proposed methods .....	184
4.3.3	Conclusions .....	189
4.A	Ignition delay prediction according to the Müller, Peters and Liñán's model for autoignition .....	190
	References .....	193

---

<b>5 Experimental results</b>	<b>195</b>
5.1 Experimental measurements of the ignition delay .....	196
5.2 Validation of the predictive methods .....	201
5.2.1 Predictive methods applied to cool flames .....	202
5.2.2 Predictive methods applied to the high exothermic stage	207
5.2.3 Conclusions .....	211
5.3 Autoignition measurements by means of optical techniques ..	213
5.3.1 Validation of the OH* sub-model. Optical measurements of the ignition delay .....	214
5.3.2 Spectroscopic analysis .....	217
5.3.3 Generalization and intensity of the auto-ignition .....	224
5.3.4 Conclusions .....	226
5.4 Autoignition propagation: a phenomenological explanation ..	228
5.4.1 Theory and calculations .....	228
5.4.2 Results and discussion .....	232
5.4.3 Conclusions .....	245
References .....	246
<b>6 Conclusions and future works</b>	<b>249</b>
6.1 Conclusions .....	249
6.2 Future works .....	256
References .....	259
<b>7 Appendices</b>	<b>261</b>
7.1 Appendix: Evaluation of the homogeneity in temperature at the RCEM by CFD calculations .....	261
7.1.1 Evolution of the in-cylinder temperature during the filling and compression processes .....	262
7.1.2 Fuel vaporization, mixing and stratification characteris- tic times .....	270
7.2 Appendix: N-dodecane evaporation characteristic time in RCEM experiments .....	275

7.3 Appendix: Post-processing of the experimental data from the RCEM .....	279
7.3.1 Models and their fitting procedure .....	279
7.3.2 Calculation of diagnosis parameters .....	285
References .....	288
<b>References</b>	<b>289</b>
