<b>I. Introduction</b>	<b>1</b>
1. Functional foods	3
1.1. Definition	3
1.2. Interest in functional foods	4
1.3. Challenges in the design of enriched functional foods	4
2. Microencapsulation	7
2.1. Definition and advantages	7
2.2. Microencapsulation methods	8
2.2.1. Physical/physic-mechanical microencapsulation techniques	9
2.2.2. Physic-chemical microencapsulation techniques	11
2.2.3. Chemical microencapsulation technologies	12
2.2.4. Biological microencapsulation technologies	13
3. Food-grade microencapsulation matrices	13
3.1. Carbohydrates	13
3.2. Proteins	15
3.3. Lipids	15
3.4. Selection of the encapsulation matrix	16
4. Electrohydrodynamic processing	17
4.1. Fundamentals of electrohydrodynamic processing	17
4.1.1. Influence of the solution properties	19
4.1.2. Influence of the process parameters	19
4.2. Advantages of electrospraying for microencapsulation	20
4.3. Challenges of electrospraying for food applications	22

4.3.1. High surface tension and conductivity of aqueous solutions_____	22
4.3.2. Incorporation of hydrophobic bioactive ingredients_____	23
4.3.3. Electro spraying of biopolymeric matrices_____	24
4.4. Trends in electro spraying for food applications_____	25
5. References_____	26

**II. Objectives\_\_\_\_\_ 41**

**III. Results\_\_\_\_\_ 45**

1. Chapter 1_____	49
Introduction to Chapter 1_____	51
1.1. Electro sprayed gelatin submicroparticles as edible carriers for the encapsulation of polyphenols of interest in functional foods _____	53
1.2. Impact of molecular weight on the formation of electro sprayed chitosan microcapsules as delivery vehicles for bioactive compounds_____	81
1.3. Stability and bioaccessibility of EGCG within edible micro-hydrogels. Chitosan vs. gelatin, a comparative study _____	107
2. Chapter 2_____	143
Introduction to Chapter 2_____	145
2.1. Protein-based emulsion electro sprayed micro- and submicroparticles for the encapsulation and stabilization of thermosensitive hydrophobic bioactives_____	147
2.2. Potential of microencapsulation through emulsion-electro spraying to improve the bioaccessibility of $\beta$ -carotene__	179
2.3. Microencapsulation structures based on protein-coated liposomes obtained through electro spraying for the stabilization and improved bioaccessibility of curcumin _____	207

2.4. A step forward towards the design of a continuous process to produce hybrid liposome/protein microcapsules_____	231
3. Chapter 3_____	247
Introduction to Chapter 3_____	249
3.1. Optimization of electrospraying conditions for the microencapsulation of probiotics and evaluation of their resistance during storage and in-vitro digestion _____	251
4. Chapter 4_____	275
Introduction to Chapter 4_____	277
4.1. Binding of dietary phenolic compounds to potato cells and individual cell components - nutritional and industrial implications _____	279
5. Chapter 5_____	303
Introduction to Chapter 5_____	305
5.1. Microencapsulation of a whey protein hydrolysate within micro-hydrogels: Impact on gastrointestinal stability and potential for functional yoghurt development_____	307
5.2. Impact of microencapsulation within electrosprayed proteins on the formulation of green tea extract-enriched biscuits_____	329
<b>IV. General discussion_____</b>	<b>353</b>
1. Microencapsulation of hydrophilic bioactive ingredients_____	355
2. Microencapsulation of hydrophobic bioactive ingredients_____	356
3. Microencapsulation of probiotic microorganisms_____	359
4. Potential of plant cells as delivery vehicles for functional ingredients_____	360

## *Index*

5. Application of microencapsulation in real food systems_____	360
<b>V. Conclusions_____</b>	<b>363</b>
<b>VI. Annexes_____</b>	<b>369</b>
Annex A. List of publications included in this thesis_____	371
Annex B. List of additional publications _____	383
