

ÍNDICE GENERAL

INTRODUCCIÓN GENERAL.....	3
OBJETIVOS.....	25
PRESENTACIÓN DE LOS TRABAJOS.....	29
CAPÍTULO 1. Sunflower oil - water – cellulose ether emulsions as trans fatty acid free fat replacers in biscuits. Texture and acceptability study.....	33
INTRODUCTION.....	34
MATERIAL AND METHODS.....	36
Shortening replacer preparation.....	36
Biscuit ingredients.....	37
Biscuit preparation.....	38
Dough texture measurements.....	38
Biscuit evaluation.....	39
Consumer sensory analysis.....	40
Statistical analysis.....	41
RESULTS AND DISCUSSION.....	41
Dough characteristics.....	41
Biscuit evaluation.....	46
Consumer sensory analysis.....	51
CONCLUSIONS.....	53
REFERENCES.....	54
CAPÍTULO 2. Relevance of creep and oscillatory tests to understand the functionality of cellulose emulsions as fat replacers	

in biscuits.....	61
INTRODUCTION.....	62
MATERIAL AND METHODS.....	64
Materials.....	64
Dough preparation.....	66
Rheological experiments.....	66
Oscillatory tests.....	66
Creep tests.....	67
Statistical analysis.....	67
RESULTS AND DISCUSSION.....	67
Creep tests.....	67
Oscillatory test.....	70
Correlations between creep and oscillatory results, dough texture, biscuit texture and spread properties.....	75
CONCLUSIONS.....	77
REFERENCES.....	78

CAPÍTULO 3. Formulating biscuits with healthier fats. Consumer profiling of textural and flavour sensations during consumption..... 83

INTRODUCTION.....	
MATERIAL AND METHODS.....	87
Ingredients and Biscuit Preparation.....	87
Sensory Evaluation.....	89
Data Analysis.....	90
RESULTS AND DISCUSSION.....	90
Terms used by consumers to describe the sensations perceived during biscuit consumption.....	90
Sensory differences among biscuits with different fat types and content.....	93

Sensory differences among biscuits during each eating period....	95
CONCLUSIONS.....	100
REFERENCES.....	101
CAPÍTULO 4. Effect of fat on mechanical and acoustical properties of biscuits related to texture properties perceived by consumers.....	107
INTRODUCTION.....	108
MATERIAL AND METHODS.....	111
Samples.....	111
Biscuit preparation.....	112
Instrumental texture measurements.....	113
Sensory texture evaluation.....	115
Statistical Analyses.....	116
RESULTS AND DISCUSSION.....	116
Instrumental measurements of biscuit texture.....	116
Sensory texture of biscuits. Relation with instrumental parameters.....	123
CONCLUSIONS.....	128
REFERENCES.....	129
CAPÍTULO 5. Sensory properties and acceptance of biscuits made with olive and sunflower oil.....	135
INTRODUCTION.....	136
MATERIAL AND METHODS.....	137
Samples description.....	137
Biscuit preparation.....	138
Consumer test.....	139
Data analysis.....	139

RESULTS AND DISCUSSION.....	140
Biscuit acceptability: influence of individual preferences.....	140
Differences among samples described by CATA.....	142
Relationship between consumer acceptability of biscuits and CATA results.....	144
CONCLUSIONS.....	147
REFERENCES.....	148
CAPÍTULO 6. Consumers' hedonic expectation and healthiness perception of biscuits made with olive or sunflower oil.....	153
INTRODUCTION.....	154
MATERIAL AND METHODS.....	158
Samples.....	158
Biscuit preparation.....	159
Nutritional knowledge questionnaire.....	160
Consumer test.....	160
Data analysis.....	162
RESULTS AND DISCUSSION.....	163
Consumers' knowledge about fat. Effect on liking and healthiness perception of biscuits.....	163
Effect of fat source and fat content on consumers liking and healthiness perception of biscuits under expected, blind and informed conditions.....	166
Comparison between expected, blind and informed condition...	174
CONCLUSIONS.....	178
REFERENCES.....	179
RESUMEN DE RESULTADOS.....	185
CONCLUSIONES GENERALES.....	197
