1	Introduction	1
1.1	Context and motivation of the present study	2
1.2	Research objectives	3
1.3	Structure of thesis	3
2	Literature review	4
2.1.	Introduction	5
2.2.	Consideration of cracking in the design of concrete structures	6
2.2.1	Causes of cracking	6
2.2.2	Basis of theory of cracking calculations in design codes	7
2.2.3	Recommendations for design for durability	11
2.2.4	Concrete cracking and durability	12
2.2.5	Self-healing in concrete	13
2.3.	Deterioration in concrete structures due to chloride-induced corrosion	13
2.3.1	Definition of service life with respect to rebar corrosion	13
2.3.2	Basic theory of chloride-induced corrosion in concrete	14
2.3.3	Mechanisms of chloride transport in concrete	15
2.4.	Service life models for chloride-induced corrosion	18
2.4.1	Modelling of chloride penetration into concrete	18
2.4.2	Parameters for service life evaluation	18
2.5.	Chloride ingress in concrete	21

2.6 Chloride ingress in cracked concrete	24
2.6.1 Autogenous Self-healing of concrete	24
2.6.2 Crack width	24
2.6.3 Crack depth	25
2.6.4 Number of cracks – crack frequency	25
2.6.5 Crack orientation	26
2.7 Modelling chloride transport in cracked concrete structures	27
3 Experimental program design	31
3.1. Introduction	32
3.2. Materials and Methods	32
3.2.1 Experimental variables	32
3.2.2 Materials and Concrete production	33
3.2.4 Provision for monitoring of rebar corrosion	35
3.2.5 Mechanical cracking procedure	36
3.2.6 Marine environmental exposure – XS2 exposure class	39
3.2.7 Rebar corrosion monitoring using HCP measurements	41
3.2.8 Chloride diffusion in cracked beams	43
3.3 Characterization of the concrete	45
3.3.1. Concrete mechanical characterization	45
3.3.2. Porosity analysis using MIP	46
3.3.3. Accelerated chloride transport – migration test	48
3.4 Summary	52
4 Accelerated characterization of chloride ingress in cracked concrete	53
4.1. Introduction	54
4.2. Characterization of cracking levels in the concrete samples	54
4.3. Experimental results	56
4.3.1 Colorimetric chloride penetration profiles	56
4.3.2 Mean Chloride Profile Thickness (xh1 & xh2) vs. mean Chloride Penetration Depths (xd)	58

4.3.4	Effect of Pre-healing in water on cracked migration coefficient	62
4.3.5	Variation in Cracked migration coefficient with crack width	63
4.4.	Summary and Conclusions	65
5	Cracking analysis of structural beams with self-healing	67
5.1.	Introduction	68
5.2.	Calculations for crack spacing and crack width	69
5.2.1	Input values of variables for cracking analysis	70
5.2.2	As per EN 1992-1-1:2021	70
5.2.3	As per ACI 224R-01	72
5.2.4	As per Model Code 2010	72
5.2.5	As per NFP 18-710 for UHPFRC	74
5.3.	Experimental results	75
5.3.1	Strain levels, ($\epsilon_{sm}-\epsilon_{cm}$)	75
5.3.2	Crack spacing, S_{max}	79
5.3.3	Crack width, w_k	81
5.4.	Comparison between calculated theoretical and experimental results	82
5.4.1	Maximum crack spacing	82
5.4.2	Crack width	85
5.5	Summary and conclusions	90
6	Evolution of Reinforcement Corrosion and Chloride transport in Cracked Beams	92
6.1.	Introduction	93
6.2.	Experimental results	93
6.2.1	Variability in E_{corr} along the beam	94
6.2.2	Influence of concrete quality	96
6.2.3	Influence of crack width and self-healing agent	97
6.2.4	Final analysis of cracked concrete on rebar corrosion risk	99
6.2.5	Influence of Concrete Cover	102
6.3.	Analysis of chloride ingress with affected surface area	103
6.4.	Chloride concentration variation in structural beams and diffusion analyses	106

6.5. Conclusions	108
7 Service Life Modelling of Cracked beams	111
7.1. Introduction	112
7.2. Parameters to be considered in the evaluation of the service life	112
7.3. Evaluation of service life of cracked beams utilizing natural diffusion test results	114
7.4. Summary and conclusions	118
8 Summary and Conclusions	122
8.1. Summary	123
8.2. General conclusion	128
8.3. Future research	130
Publications	131
Annexure A	133
Annexure B	136
Annexure C	139
