| Summary                                                                                               | 10 |
| Resumen                                                                                               | 11 |
| Resum                                                                                                 | 12 |
| General Introduction                                                                                  | 13 |
| References                                                                                            | 16 |
| Chapter 1: Literature review and bibliographic framework                                              | 17 |
| Introduction                                                                                          | 18 |
| I. TiO <sub>2</sub> -based applications:                                                              | 18 |
| 1. Photocatalytic application:                                                                        | 18 |
| 2. Biomedical implants                                                                                | 23 |
| II. Metal Oxide Materials:                                                                            | 28 |
| 1. Titanium dioxide TiO <sub>2</sub> :                                                                | 29 |
| 1.1 Structural properties:                                                                            | 29 |
| 1.2 Electronic and optical properties:                                                                | 31 |
| 1.3 Titanium dioxide TiO <sub>2</sub> nanotubes:                                                      | 31 |
| 2. Copper oxides Cu <sub>2</sub> O and CuO:                                                           | 39 |
| 2.1 Structural properties:                                                                            | 39 |
| 2.2 Electronic and optical properties:                                                                | 39 |
| 3. Nickel oxide NiO:                                                                                  | 40 |
| 3.1 Structural properties:                                                                            | 40 |
| 3.2 Optical and electronic properties:                                                                | 41 |
| 4. Nickel-Copper oxide NiCuOx:                                                                        | 42 |
| Conclusion                                                                                            | 45 |
| References                                                                                            | 46 |
| Chapter 2: Experimental techniques for development and characterization and process of photocatalysis | 51 |
| Introduction                                                                                          | 52 |
| I. Sample preparation:                                                                                | 52 |
| 1. TiO <sub>2</sub> nanotubes anodization:                                                            | 52 |
| 2. Cu <sub>2</sub> O deposition with SILAR method:                                                    | 53 |

|      |                                                                                               |    |
|------|-----------------------------------------------------------------------------------------------|----|
| 3.   | NiCuOx deposition with electrodeposition method:                                              | 54 |
| II.  | Sample characterization:                                                                      | 54 |
| 1.   | Scanning electron microscopy SEM:                                                             | 54 |
| 2.   | Transmission electron microscopy TEM:                                                         | 55 |
| 3.   | X-ray diffraction XRD:                                                                        | 56 |
| 4.   | UV-Vis spectroscopy:                                                                          | 57 |
| 5.   | Photoluminescence PL:                                                                         | 58 |
| III. | Anti-Wear and Anti-corrosion test:                                                            | 58 |
| 1.   | Adhesion measurement by scratch test:                                                         | 58 |
| 1.1  | Principle:                                                                                    | 58 |
| 1.2  | Experimental procedure:                                                                       | 59 |
| 2.   | Tribological Test:                                                                            | 60 |
| 2.1  | Generality:                                                                                   | 60 |
| 2.2  | Principle:                                                                                    | 61 |
| 3.   | Corrosion test:                                                                               | 63 |
| 3.1  | Generality:                                                                                   | 63 |
| 3.2  | Principle:                                                                                    | 64 |
| IV.  | Photocatalytic test:                                                                          | 64 |
| 1.   | Black Amido:                                                                                  | 64 |
| 2.   | Bisphenol A:                                                                                  | 65 |
| 3.   | Experimental process:                                                                         | 66 |
|      | Conclusion                                                                                    | 67 |
|      | References                                                                                    | 68 |
|      | Chapter 3: Synthesis, characterization, and photocatalytic application of supported catalysts | 69 |
|      | Introduction                                                                                  | 70 |
| I.   | Cu <sub>2</sub> O/TiO <sub>2</sub> NTs photodegradation of Black Amido AB:                    | 70 |
| 1.   | Morphological characterization:                                                               | 70 |
| 2.   | Structural characterization:                                                                  | 72 |
| 3.   | Optical properties:                                                                           | 75 |
| 4.   | Photocatalytic application:                                                                   | 78 |
| II.  | NiCuOx/TiO <sub>2</sub> photodegradation of Bisphenol A BPA:                                  | 83 |
| 1.   | Morphological characterization:                                                               | 83 |
| 2.   | Structural characterization:                                                                  | 87 |
| 3.   | Optical properties:                                                                           | 89 |
| 4.   | Photocatalytic application:                                                                   | 92 |
|      | Conclusion                                                                                    | 96 |

|                                                                                                                                                                     |     |
