

SUMMARY	I
RESUMEN	III
RESUM	VII
ABBREVIATIONS	XI
GENERAL INTRODUCTION	1
1. Impact of pathogenic fungi in agriculture and health.....	1
2. The urgent need of novel antifungal biomolecules	5
3. Antimicrobial peptides as an alternative to control fungal pathogens	7
4. Mode of action of antifungal CRPs.....	21
5. Biotechnological production of CRPs	29
OBJECTIVES	31
CHAPTER I	37
ABSTRACT	37
INTRODUCTION.....	39
MATERIALS AND METHODS	41
Protein production and purification.....	41
Strains, media and growth conditions	41
RNA isolation and transcriptomic analysis	42
Antimicrobial activity assays.....	43
PeAfpA fluorescent labelling.....	44
Confocal microscopy assays	44
Statistical analysis	45
RESULTS	45
Transcriptional response of <i>S. cerevisiae</i> to PeAfpA.....	45
Enrichment analysis of GO and KEGG pathways.....	48
PeAfpA susceptibility of selected deletion mutants	51
PeAfpA interacts with the cell surface and internalises into the cytoplasm	54
The interaction of PeAfpA is altered in mutants with different susceptibility.....	56

Index

DISCUSSION	58
CREDIT AUTHOR STATEMENT	65
ACKNOWLEDGMENTS	65
DATA AVAILABILITY	66
SUPPLEMENTARY MATERIAL	67
CHAPTER II	73
ABSTRACT	73
INTRODUCTION.....	75
MATERIALS AND METHODS	77
Strains, media and culture conditions.....	77
Protein production and purification.....	77
Antifungal activity assays.....	77
Evaluation of germination inhibition	78
ROS determination	78
Protein labelling	79
Fluorescence microscopy	79
Statistical analyses	81
RESULTS	81
PeAfpA and PdAfpB exert potent antifungal activity against <i>P. digitatum</i> conidia and germlings.....	81
Reactive oxygen species are not involved in the mode of action of	83
PeAfpA shows weak punctate binding to the surface of quiescent conidia that depends on melanin biosynthesis	84
PeAfpA preferentially interacts with growing tips in mature hyphae, penetrates the cell and causes high vacuolisation.....	88
PeAfpA localises in the hyphal cell wall and then accumulates inside hyphae prior to causing cell death.....	90
Endocytosis is not required for PeAfpA internalisation	92
DISCUSSION	94

ACKNOWLEDGMENTS	101
SUPPLEMENTARY MATERIAL	103
Captions to supplementary videos	109
CHAPTER III	113
ABSTRACT	113
INTRODUCTION	115
MATERIALS AND METHODS	117
Strains, media and culture conditions	117
Generation of molecular assemblies for genetic transformation of <i>P. chrysogenum</i>	117
<i>A. tumefaciens</i> mediated transformation of <i>P. chrysogenum</i>	118
Production and purification of recombinant proteins	119
Western blot analyses	119
Liquid Chromatography Electrospray Ionisation Tandem Mass Spectrometry (LC-ESI-MS/MS)	120
Antimicrobial Activity Assays	121
Protein-lipid Overlay Assays	121
Protein crystallisation and data collection	122
Phase determination, model building and refinement	122
Data availability	123
RESULTS	123
Crystal structure of PeAfpB	123
Rational design of PeAfpB::PeAfpA chimeric proteins	125
Recombinant production and purification of chPeAFPs	127
chPeAFPs show significant differences in their antifungal activity	129
Structural characterisation of chPeAFPs	131
Protein O-mannosylation is important for interaction of PeAFPs and chPeAFPs with the cell wall	133
Antifungal activity and phospholipid recognition	134
DISCUSSION	136

SUPPLEMENTARY MATERIAL	145
CHAPTER IV	157
ABSTRACT	157
INTRODUCTION.....	158
MATERIALS AND METHODS	160
Strains, media and culture conditions	160
Generation of molecular assemblies for <i>Agrobacterium tumefaciens</i> mediated transformation of <i>P. chrysogenum</i>	160
Production, purification and identification of recombinant proteins.	161
Protein crystallisation and data collection.....	162
Phase determination, model building and refinement.....	162
Antimicrobial activity assays.....	162
Protein-lipid overlay assays	163
SYTOX Green uptake assay	163
Determination of reactive oxygen species	163
Protein labelling	164
Microscopy analyses	164
Toxicity assay in <i>Galleria mellonella</i>	165
Data availability	165
RESULTS	165
Rational design of chimeric proteins	165
Recombinant production and characterisation of chPeAFPs	167
Single E11K mutation enhanced PeAfpB antifungal activity	168
Crystal structure of chPeAFPV6 and chPeAFPV7	169
Antifungal activity seems to be correlated with lipid binding	170
Antifungal activity against <i>P. digitatum</i> correlates with cell permeabilisation but not with ROS induction.....	172

Internalisation of AFPs is needed but not sufficient for causing <i>P. digitatum</i> cell death.....	174
PeAfpA penetrates <i>C. auris</i> cells in a cell-wall dependent process...	175
AFPs are not toxic to <i>Galleria mellonella</i> larvae	177
DISCUSSION	178
ACKNOWLEDGMENTS	184
SUPPLEMENTARY MATERIAL	185
GENERAL DISCUSSION	197
1. PeAfpB structural scaffold enables antifungal protein engineering and functional characterisation.....	200
2. Fungal cell wall is key for PeAfpA activity	204
3. Relevance of membrane lipids in the antifungal mechanism	207
4. PeAfpA requires internalisation and exhibits a multi-targeted intracellular mode of action.....	211
5. Concluding remarks and future prospects	215
CONCLUSIONS	219
