

Table of contents

1.	Introduction and objectives	1
1.1	Background.....	1
1.2	Research objectives.....	2
1.3	Methodology	5
1.4	Dissertation structure	8
2.	State-of the-art.....	11
2.1	Post-tensioned voided slab bridge decks.....	13
2.2	Slab bridge deck optimization	21
2.2.1.	Cost slab bridge deck optimization	25
2.2.2	Carbon emissions slab bridge deck optimization.....	28
2.2.3	Embedded energy slab bridge deck optimization.....	30
2.5	Multi-objective slab bridge deck optimization.....	33
2.6	Decision-making for slab bridges	36
2.7	Conclusions.....	40
3.	CO ₂ -optimization of PC slab-bridge decks using surrogate modeling.....	43
3.1	Introduction.....	44
3.2	Description of the lightened slab bridge deck	46
3.3	Methodology	47
3.3.1	Sampling method	47
3.3.2	CO ₂ emissions assessment	48
3.3.3	Response surface optimization and generation method.....	49
3.4	Results	52
3.4.1	Diversification phase	52
3.4.2	Intensification phase	55
3.5	Discussion.....	56
3.6	Practical recommendations	59
3.7	Conclusions.....	60

4. Embodied energy optimization of prestressed concrete road flyovers by a two-phase Kriging surrogate model.....	61
4.1 Introduction.....	62
4.2 Problem description	65
4.3 Methodology	67
4.4 Results	69
4.4.1 Search diversification phase.....	69
4.4.2 Search intensification phase	71
4.5 Discusión	72
4.6 Conclusions.....	74
5. Artificial neural network and Kriging surrogate model for embodied energy optimization of prestressed slab bridges	77
5.1 Introducción	78
5.2 Voided slab bridge deck description	80
5.3 Methodology	81
5.3.1 Kriging metamodel	84
5.3.2 Artificial neural network.....	85
5.4 Results and Discussion	87
5.4.1 Visualization of Observed Data	87
5.4.2 Comparison of predictive models	88
5.4.3 Error analysis	88
5.4.4 Practical recommendations	91
5.5 Conclusions.....	92
6. Surrogate-assisted cost optimization for post-tensioned concrete slab bridges	93
6.1 Introduction.....	94
6.2 Three-span post-tensioned road flyover description.....	96
6.3 Surrogate modeling.....	98
6.3.1 Kriging metamodel	99
6.3.2 Artificial neural network.....	99
6.3.3 Radial basis functions	100
6.4 Methodology	101
6.4.1 Cost evaluation.....	102
6.4.2 Sampling and data collection	102
6.4.3 Response surface optimization approach	105
6.5 Results and discussion.....	106
6.5.1 Visualization of observed data	107

6.5.2 Prediction models comparison.....	109
6.5.3 Recommendations for practical use.....	112
6.6 Conclusions.....	113
7. Predictive modeling for carbon footprint optimization of prestressed road flyovers.....	115
7.1 Introduction.....	116
7.2 Description of the voided slab bridge	118
7.3 Methodology	119
7.3.1 Radial basis functions.....	124
7.3.2 Kriging metamodel.....	125
7.3.3 Artificial neural networks	125
7.3.4 Gaussian process regression	126
7.4 Results and discussion.....	127
7.5 Practical design recommendations	132
7.6 Concluding remarks.....	132
8. Multi-criteria optimization and decision-making for prestressed concrete slab bridges based on metamodeling	135
8.1 Introduction.....	136
8.2 Post-tensioned road flyover description.....	139
8.3 Kriging surrogate model.....	141
8.4 Multi-criteria decision making	142
8.4.1 The simple additive weighting	143
8.4.2 The multi-attribute approach.....	144
8.4.3 The entropy weight method	144
8.4.4 The CRITIC approach	145
8.5 Methodology	146
8.5.1 Objective functions	147
8.5.2 Sampling and data collection	148
8.6 Results and discussion.....	151
8.6.1 EWM-Kriging response surfaces.....	151
8.6.2 Identification of trade-off solutions using MCDM	154
8.6.3 Recommendations for practical use.....	161
8.7 Conclusions.....	163
9. Discussion.....	165
9.1 Fulfillment of research questions discussion	165
9.2 Fulfillment of research objectives discussion	169
9.3 Optimal bridge configurations discussion.....	174

9.4 Contributions discussion	176
10. Conclusions	181
10.1 General conclusions	181
10.2 Specific conclusions.....	182
10.3 Future lines of research.....	183
References.....	187
