

Table of contents.

<u>Chapter 1: INTRODUCTION</u>	1
1.1. Global warming: environmental crisis and carbon cycle	3
1.2. Decarbonization of the transport sector	11
1.2.1. Alternatives to fossil fuels.	12
1.2.2. Drop-in biofuels as a driver of decarbonization.	16
1.2.3. Use of lignocellulosic biomass to produce SAF.	20
1.2.4. Upgrading of pyrolysis oil into drop-in fuels.	29
1.2.4.2.1. Hydroprocessing upgrading of fast pyrolysis bio-oils.....	34
1.2.4.2.2. Catalytic cracking upgrading of fast pyrolysis bio-oils.....	38
1.2.4.2.3. Combined hydroprocessing/catalytic cracking upgrading.	41
1.2.5. Co-Processing of pyrolysis oil in refinery as upgrading strategy.	43
1.3. Decarbonization of the chemical industry	52
1.3.1. Decarbonization of the plastic industry.	60
1.3.2. Possible biogenic resources to produce plastic polymers.	62
1.3.3. Lipids as renewable feedstock to produce plastics.	65
1.4. References	69
<u>Chapter 2: SCOPE AND OBJECTIVES OF THE THESIS</u>	87
<u>Chapter 3: EXPERIMENTAL METHODS</u>	93
3.1. Materials synthesis	95
3.1.1. MFI zeolites.....	95
3.1.1.1. ZSM-5 zeolites with different Si/Al ratios.	96
3.1.1.2. Nanosized ZSM-5 zeolite.....	97
3.1.1.3. ZSM-5 zeolite having Al acid sites preferentially positioned within sinusoidal channels.	98
3.1.1.4. Hierarchical ZSM-5 zeolite.....	99
3.1.2. ZSM-12 zeolite.....	101
3.1.3. IM-5 zeolites.....	102
3.1.3.1. IM-5 zeolites with different Si/Al ratios.	103
3.1.3.2. Hierarchical IM-5 zeolite.	104
3.1.4. MSE-type zeolites.	105
3.1.4.1. MCM-68 zeolite.	105
3.1.4.2. UZM-35 zeolite.	108
3.1.5. Nano-sized ferrierite zeolite.	110
3.1.6. ITQ-13 zeolite.	111
3.1.7. TNU-9 zeolite.....	112
3.1.8. ITQ-27 zeolite.	114
3.1.9. ITQ-2 zeolite.	116

3.2. Commercial zeolites.....	117
3.2.1. USY zeolite.....	117
3.2.2. BETA zeolite.	118
3.2.3. ZSM-22 zeolite.....	119
3.3. Catalyst characterization methods.....	120
3.3.1. X-ray diffraction (XRD).	120
3.3.2. Inductively coupled plasma optical emission spectroscopy (ICP-OES).....	121
3.3.3. Textural properties: adsorption-desorption of nitrogen.	122
3.3.4. Nuclear magnetic resonance (NMR) spectroscopy.....	128
3.3.4.1. Liquid NMR spectroscopy.....	128
3.3.4.2. Solid NMR spectroscopy.....	129
3.3.5. Fourier Transform InfraRed spectroscopy (FTIR) analysis.	132
3.3.6. Electron microscopy.....	133
3.4. Feedstock characterization.	134
3.5. Catalytic testing.	137
3.5.1. Fixed-bed catalytic cracking.	137
3.5.2. Transported-bed catalytic cracking – Micro-Downer Unit (MDU)	141
3.6. References.	145
<u>Chapter 4: CATALYTIC CRACKING OF HYDROTREATED VEGETABLE OILS (HVO) TO GREEN CHEMICALS.</u>	<u>153</u>
4.1. Preliminary considerations.....	155
4.2. ZSM-5 zeolite as cracking catalyst to produce green olefins from HVO.....	157
4.2.1. Study of mass transport limitations.....	157
4.2.1.1. External mass transport limitations.....	160
4.2.1.2. Internal mass transport limitations.....	175
4.2.1.3. Catalyst bed dilution.....	182
4.2.2. Optimization of operation conditions.	184
4.2.2.1. Thermodynamic equilibrium estimation of light olefins yields via Gibbs free energy minimization.	185
4.2.2.2. Experimental validation of light olefins formation under varying reaction conditions.	192
4.2.2.2.1. Cracking temperature.....	192
4.2.2.2.2. Initial hydrocarbon partial pressure.	201
4.2.3. Optimization of ZSM-5 physicochemical properties.....	204
4.2.3.1. Zeolite crystal size.....	205

4.2.3.2. Si/Al molar ratio.....	214
4.2.3.3. Acid site location.....	223
4.2.4. Processing hydrotreated vegetable oils (HVO) over ZSM-5 catalyst.	230
4.2.4.1. ZSM-5 catalyst stability.....	234
4.3. Cracking hydrotreated vegetable oils (HVO) over other zeolitic materials.	237
4.3.1. Catalyst stability during HVO cracking.....	255
4.4. Light olefins intensification through C5+ fraction re-cracking.....	257
4.4.1. Direct recycling of the C5+ fraction.	260
4.4.1.1. Determination of steady-state product yields during C5+ fraction recycling.....	260
4.4.1.2. Catalyst stability in the direct recycling of the C5+ fraction.	270
4.4.2. C5+ fraction re-cracking in a secondary dedicated reactor.	274
4.4.3. Simulation of coupling a steam cracking unit to improve carbon efficiency.....	278
4.5. Conclusions.	283
4.6. References.....	285
<u>Chapter 5: CATALYTIC CRACKING OF RENEWABLE DIESEL TO GREEN CHEMICALS.</u>	<u>297</u>
5.1. Preliminary considerations.....	299
5.2. Cracking of HEFA diesel over zeolites selected for HVOs olefins production.....	301
5.3. Cracking renewable diesel over other zeolitic materials.....	316
5.4. Light olefins intensification through C5+ fraction re-cracking.....	332
5.4.1. Direct recycling of the C5+ fraction.	333
5.4.2. C5+ fraction re-cracking in a second reactor.....	349
5.4.3. Catalyst stability during light olefins intensification strategies. .	354
5.4.4. Simulation of coupling a steam cracking unit to improve carbon efficiency.....	360
5.5. Comparative cracking performance of HVOs and HEFA renewable diesel.....	364
5.6. Conclusions.	367
5.7. References.	370

**Chapter 6: INTEGRATION OF BIO-DERIVED PYROLYSIS OIL
IN THE FLUID CATALYTIC CRACKING PROCESS FOR THE
PRODUCTION OF RENEWABLE FUELS..... 375**

6.1. Preliminary considerations.....377

6.2. Preparation and compositional analysis of biogenic feedstocks.379

6.3. Characterization of reference HVGO and FCC catalyst.389

6.3.1. Reference VGO feedstock.389

6.3.2. Reference FCC catalyst.392

**6.4. Impact of Bio-Oil upgrading on biogenic carbon and hydrogen
incorporation in FCC Products.....397**

**6.5. Impact of prior Bio-Oil upgrading during co-processing of biogenic
feedstocks with HVGO.....405**

6.5.1. Impact on FCC activity, product yield and selectivity.....405

6.5.2. Impact on the quality of obtained drop-in fuels.419

6.6. Conclusions.425

6.7. References.428

Chapter 7: CONCLUSIONS. 437

ANEX I: Table of Figures. 459

ANEX II: Table of Tables. 471

ANEX III: Scientific Production..... 475
